Lastly, in the WRC-07 Table Clean-Up Order, the FCC combined the 10 to 10.45 GHz and 10.45 to 10.5 GHz bands in the Federal Table of Allocations. In doing so, the frequency band was inadvertently not changed to 10 to 10.5 GHz. To fix this the FCC will revise the text of three footnotes that pertain to this spectrum by adding the existing Amateur-Satellite Service allocation to the list of permitted non-federal services. It will also order that non-federal stations in the Radiolocation Service not cause harmful interference to the Amateur Service in the 10 to 10.5 GHz band.

As we said, its pretty good news for ham radio here in the USA.

From the studio in Los Angeles, Im Bill Pasternak, WA6ITF.

--

If approved as written, these changes will implement allocation decisions from the 2007 World Radiocommunication Conference that concern those portions of the radio frequency spectrum between 108 MHz and 20.2 GHz by making specific updates to the rules in this frequency range. You can download the full text of ET Docket 12-338 at as a Word document at tinyurl.com/proposed-wrc-changes (FCC)

RADIO LAW: NTSB VS CEA ON DISTRACTED DRIVING AND DISTRACTED TRANSIT

The National Transportation Safety Board wants to eliminate all driver distraction and is broadening its focus on the use of portable electronic devices in all types of vehicles. The issue is part of the NTSB□s recently released □2013 Most Wanted List.□ Amateur Radio Newsline□s Norm Seeley, KI7UP, is here with the details:

--

While acknowledging that distracted driving didn□t begin when people began making calls or texting in the car, the National Transportation Safety Board still says that portable electronic devices that do not

directly support the task at hand have no place in any vehicles. This includes automobiles planes, trains, and just about any other vessel you might be able to think of. As such it argues that states and regulators can set the proper tone by banning the nonessential use of such devices in all areas of transportation.

The NTSB says that young drivers are more likely to use portable electronic devices while behind the wheel and therefore are especially at risk. It urges that laws, education, and enforcement efforts should place special emphasis on curbing the use of portable electronic devices by these younger drivers.

The NTSB goes on to say that companies should develop and vigorously enforce policies to eliminate distractions. It also says that manufacturers can assist by developing technology that disables these devices when in reach of operators.

But the NTSB has some strong opposition from the Consumer Electronics Association or CEA. That organization says that while it applauds the effort, it also notes that the NTSB misses the mark on the use of portable electronics in vehicles. It says that calling for an abstinence only approach, the NTSB ignores established realities of human behavior. It also claims that in-vehicle technology when used correctly can make for vastly safer roadways.

The CEA says that rather than calling for broad regulations or outright bans, policymakers should encourage the use of the many innovative driver safety technologies coming on to the marketplace. The CEA notes that it has already forwarded the NTSB a list of third-party applications that promote safe use of portable technologies in the automobile.

How any of this might affect mobile or even hand held pedestrian portable operations in the future by ham radio operators and other users of two-way radio is at this time unknown. But the NTSB stand seems to be that any and all forms of distraction must be removed from the public□s hands while in transit. And that□s not likely to sit well with the public at large.

For the Amateur Radio Newsline, I□m Norm Seeley, KI7UP. In Scottsdale, Arizona.

--

It should be noted that the National Transportation Safety Board is an independent body that has no authority to enact transportation policy, nor to force the federal government to make transportation policy changes. However it makes recommendations to governments, industry and the public and uses its □Most Wanted□ list as a way to highlight changes that it is advocating. (RW)

**

WORLDBEAT: ALL RADIO SOUTH AFRICAN AMATEURS WILL HAVE TO REAPPLY FOR THEIR LICENSES

All South African radio amateurs are going to have to reapply for their licenses. This is according to the South African Radio League which says its liaison committee met with that nation□s telecommunications regulatory body Independent Communications Authority of South Africa.

At that meeting the national society learned that following an audit by the Auditor General, that the communications regulator has been instructed to implement regulation 15 of the nations Radio Frequency Spectrum Regulations. This is a law that stipulates that an amateur radio license can only be renewed for up to five years after which a new application has to be submitted. Because of this, all South Africa licensed radio amateurs will be required to re-apply for a license for the period of April 1st 2013 through March 31st 2018.

The South Africa Radio League says that the details as to how this will be accomplished are expected to be made public in the next few weeks. Until that time, South African hams should do nothing. As soon as information is made available the South Africa Radio League announce it via its news bulletin service system and make forms available on its website at www.sarl.org.za. (SARL, ICASA)

yes nostalgia is not what it used to be....the reason it was no good for the
merc was that the antenna is the side back estate window and it is amplified
but not for the stupid dab band.....

You are assuming it is genuine. Don't forget Jim's famous claim to have been
"beaten up".

Perhaps it is a bit of 'photoshop' or even nothing to do with amateur radio,
just local yobs leaving a nearby pub. Somehow I doubt he lives in the best
of areas.

DXNL 1808 - Nov 28, 2012
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

Editor: Johannes Amchewicz, DK8JB
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

3B, MAURITIUS, AF-049
Achmed,3B8BAE, is a newcomer who can be found in SSB on 28491 kHz
almost every day around 1400 UTC if the propagation allows. He plans
to be active in CW as well in the future.
QSL via K5XK, unfortunately only direct.

9Y, TOBAGO, SA-009
Gerd,9Y4/DL7VOG, is working mainly CW and RTTY on 160m-6m until Dec 3.
He is using an IC-706, HF9VX and 15m vertical for the topband.
QSL via homecall. See also: http://www.dl7vog.de

A6, UNITED ARAB EMIRATES
The special event station A641ND celebrates the 41st anniversary of
their independence (Dec 2, 1971) and the National Day of the
United Arab Emirates. QSL via IZ8CLM. See also: http://www.ears.ae/en

F, FRANCE
Until Dec 8, the Radio Club of Faremoutiers (F6KBK) is working from the
"Manoir de l'obelisque" (DFCF 77-183, FFF-1219) in the departement
Seine et Marne/77, region Ile-de-France (DPF 21). The OPs are
Patrice,F6GCP (17m/30m CW), Fabien,F4GYM (40m/10m SSB), and
Chris,F4GTB (15m/20m Digimode, RTTY/PSK31).

ON, BELGIUM
The special callsigns OR200HC and OP200HC celebrate the 200th birthday
of the Belgian writer Hendrik Conscience from Dec 1-31.
QSLs OR200HC via ON3AIM, OP200HC via ON2CYV, unfortunately only direct.

PY, BRAZIL
The special event station PQ125GBA celebrates the 125th anniversary
of the foundation of Guarabira City and the 21st anniversary of the
3rd Battalion Military Firefighters and the "V Walk of Fire" sporting
event. The station will be active in SSB, CW and digital modes on

10m/15m/17m/20m/30m/40m/80m until Dec 20. QSL via PR7AYE.

SP, POLAND
The special event station SN15ZIP will be activated to celebrate the
15th anniversary of the the scout station SP5ZIP. QSL via SP5ZIP.

After 22 years of absence in the Museum of Technology in Warsaw the
amateur radio station is operating again! The station was launched by
members of the radio club SP5PRF "Radio Oaza". The special callsign
3Z5MT will be activated in all modes on all bands by Wojtek,SP5MXW,
Grzegorz,SP5VLM, Radek,SQ5NWF, Krzysztof,SQ5NWI, Radek,SQ5NWO,
Pawel,SQ5STS, Robert,SQ5STZ, and Tomek,SQ5OBU, until Feb 28, 2013.
QSL via SP5PRF. See also: http://www.warsawtour.pl/de/node/157903

ST, SUDAN
Mario,CT1FTR, has moved to the Sudan and got his call ST2FT. He is
using a FT-857 in SSB and PSK31 on HF.
QSL via CT2GBU, unfortunately only direct and eQSL.

UR, UKRAINE
The special event station EN290L is active until Dec 15 to celebrate
the 290th birthday of Hryhorii Savych Skovoroda (Grigory Savvich
Skovoroda, 1722-1794), a Ukrainian philosopher, poet, teacher and
composer and is referred to as the Russian Socrates.
QSL via UR9LD.

V2, ANTIGUA, NA-100
Team Antigua announced that the V26B contest station was totally
destroyed by fire on Nov 18. Luckily, no one was seriously hurt. The
station owner Roy,V21N, received minor injuries due to smoke inhalation
but is OK. As of now, the future of the station is uncertain but it may
be possible to rebuild it as the antennas and towers were not damaged.
The QSL manager Mike,KA2AEV, is working for a power company and is
still busy with repairs after hurricane Sandy. Thus the QSLs for V26B
have to wait a little longer. Please be patient.
See also: http://n3oc.dyndns.org/v26b

VU, INDIA

Ananth,VU2PAI, was QRT for two months after he lost his father recently
and will send out the pending QSLs soon. Please send direct QSLs with-
out green stamps. IRCs are ok but not necessary but he would rather
get some beautiful stamps on the envelope. See also QRZ.com

XV, VIETNAM
Yan,XV4Y (ex XV4TUJ), will be QRV on 80m from the Mekong Delta (for NA
from 1300-1400 UTC and for EU around 2200 UTC). Please be patient with
him since he is running only 100 watts into a low 80m-OCF-dipole and a
small loop for RX. QSL direct via OK1DOT, LoTW and eQSL.
See: http://twitter.com/#!/XV4Y/followers or http://xv4y.radioclub.asia
---
Retu,OH4MDY, is on the air again as XV2RZ mainly in digital modes on

20m-6m until Dec 10. QSL via homecall, unfortunately only direct.

YN, NICARAGUA
Scott,K7ZO, plans to produce pile-ups as YN5ZO in SSB and RTTY from
Dec 4-10 using a Spiderbeam (10-20m) and a dipole (40m). He will join
the ARRL 10m Contest in SSB as SOHP. QSL via homecall, LoTW.

Alaska/Yukon-Mini-DXpedition: Yukon John,KL7JR, plans a Mini-DXpedition
for June or July 2013. If you want to join write to: kl7jr@yahoo.com

Bad OPs, bad DXpeditions? Again and again the DX cluster reports bad op's
(lid, idiot on air) and DXpeditions (worst ever DXpedition). Are these
the comments of really serious HAMs? Such statements are evidence of
bad style and lacking any further HAM Spirit! Everyone who does not
agree with the operating style of an OP or thinks that he could do
better on a DXpedition, should spend his own time and money and have
the experience of what it looks like on the other side of a pile-up.
Voltage fluctuations, power failures, storms, accidents, illness,
cancelled flights, ministerial visits and much more are not easy
to plan.

SILENT KEY: Rod Newkirk,W9BRD/VA3ZBB, passed away on Nov 19. He was the
editor of "How's DX?" in the QST magazine from 1947-1978 and was
elected into the CQ DX Hall of Fame in 1984 and the CQ Hall of Fame
in 2002. The creation of the term "Elmer" in 1971 is accredited to him.
Our condolences and sympathy are with his family and friends.
We do not want to be sad that we lost him, but grateful that we could
get to know him as a radio friend. We will always keep him in memory.

LINKS: Current SOTA activities (mountain summits) are announced at:
http://www.sotawatch.org

Detailed information about current VHF activities can be found on the
VHF DX portal "Make More Miles on VHF" at: http://www.MMMonVHF.de

UPCOMING CONTESTS

Nov 30-Dec 2 ARRL 160m Contest
Dec 1 TARA RTTY Melee
Dec 1/2 TOPS Activity Contest
Dec 2 10m RTTY Contest
Dec 2 IGARAG St. Barbara Party

IOTA compiled by Klaus, DL7UXG (e-mail: iota@dxhf.darc.de)

Island activities:
AF-004, EA8, Canary Islands: Andrea,EA8/IK1PMR, and Claudia,EA8/PA3LEO, will
be active from Tenerife (DIE S-012, WLOTA 1276, EAA TF, Grid Loc IL18)
between Dec 3 and Feb 12. They will work on all HF bands and 6m with
Andrea focussing on CW and Claudia focussing on RTTY.
QSLs via homecalls. See also: http://www.ik1pmr.com

AF-049, 3B8, Mauritius Island: Jacques,3B8/F1BCS, is working in SSB, PSK and
RTTY on 20m/15m from Mauritius (WLOTA 0595) between Nov 27 and Dec 14.
QSL only via eQSL.

NA-080, C6, Little Bahama Bank group: Robert,AK4BM, will be active again
as C6AGT from Green Turtle Cay (NA-080) between Dec 1 and the end of
January 2013. A 10m beacon will be active during the day. Robert will
be operating only SSB and possibly digital modes (PSK31 and JT65) on
40m-10m. He may also operate from unihabited neighbouring islands
using his Yaesu FT-817 and wire antennas, most likely on 20m.
QSL direct via AK4BM, he appreciates SASE/green stamps but not required
---
Gil,N2GG, will stay on Grand Bahama Isand (WLOTA 0527) from Dec 1-12.
He plans to work holiday style as C6AGG in SSB and CW on 80m-10m.
QSL via N2GG.

NA-108, J6, St. Lucia: The "Buddies in the Caribbean" are planning another
Mini-DXpedition to St. Lucia (WLOTA 1336) from Dec 2-11. Scott,J6/KA9P,
Rob,J6/N7QT, Hugh,J6/W4VAB, Jerry,J6/W5TDY, Budd,J68FF (W3FF),
Ev,J6/W6ABM, Bryan,J6/WB8ISG, and Guy,J68UN (N7UN), will be QRV with
three stations on 160m-10m at the same time. They will join the ARRL
10m Contest as J68UN. Their goal is to make an 'ultralite' DXpedition
with simple antennas, battery-powered portable radios and DXers who
have never experienced the other side of a pileup. Most of all they
just want to have some fun. QSLs via homecalls (direct/LoTW).

NA-145, PJ5/PJ6, Sint Eustatius and Saba: A team of Japanese HAMs will be
QRV in SSB/CW/digital modes on all HF bands signing PJ5J from
St. Eustatius (WFF PAFF-025, WLOTA 1851) between Nov 30 and Dec 12.
Logs will be uploaded to ClubLog/LoTW daily and OQRS will be available.
QSL via JA1HGY (bureau/direct). See also: http://www.ndxa.net/pj5j

OC-012, V6, Yap Island: Haru,JA1XGI, is planning to stay on Yap Island and
wants to become active as V63XG from Dec 4-12. His focus will be on
the WARC bands where he wants to work in CW, SSB, RTTY and JT65.
QSL via JA1XGI (bureau/direct).
See also: http://www.ja1xgidxvacation.blogspot.com and
http://island.geocities.jp/v63xg/index.htm

OC-037, ZL9, Campbell Island: The Hellenic Amateur Radio of Association of
Australia (HARAOA) is conducting a DXpedition to the subantarctic
Campbell Island (WFF ZLFF-019, Loc RD47NL) from Nov 28 until Dec 9.
Campbell Island is on rank 15 of the most wanted DXCC entities.
The team of Pista,HA5AO, Dave,K3EL, Gene,K5GS, Glenn,KE4KY, Don,VE7DS,
Tommy,VK2IR, John,VK3YP, Les,W2LK, John,9M6XRO, and Jacky,ZL3CW, will
be QRV as ZL9HR in all modes on 160m-6m. This is the largest DXpedition
organized by an Australian club of the last 25 years.
QSL via EB7DX (bureau/direct/LoTW). OQRS will be available as well.
See also: http://www.campbell2012.com and http://k3el.wordpress.com

WFF activities:
PAFF: Fred,PA0FAW, is using the special callsign PG100NOM from the
De Hoge Veluwe national park (PAFF-005) working in CW/SSB and some

digital mode from Dec 1-28. QSL via PA0FAW.

One Step Closer to 'Space Climate' Forecasting:

Posted: 30 Nov 2012 02:00 AM PST
http://www.eham.net/articles/29434

The Sun determines the course of the planets. But the planets may also exert an influence on the Sun. Their configurations appear to be responsible for long-term cycles of increased solar activity. Scientists at Eawag and the ETH Zurich, in collaboration with colleagues from Spain and Australia, have compared cycles of solar magnetic activity over the past 10,000 years - as reconstructed from ice cores - with the action of the planets. The agreement observed is very striking, raising hopes that our ability to forecast periods of intense solar activity may ultimately be improved. This is becoming increasingly important as our society is ever-more dependent on technologies such as satellite communications and navigation systems - as well as power grids - which can be disabled by major solar eruptions.

//
Ham Radio vs Robotics for Luring Kids into Technology:

Posted: 30 Nov 2012 01:58 AM PST
http://www.eham.net/articles/29433

I'm turning the place over to Brian Cieslak, K9WIS,who writes about his personal experiences with FIRST, an organization that runs robotic competitions for kids. I answered Brian's CQ on 20 meters, and in the ensuing QSO, I mentioned that I was just back from Renesas' DevCon in Orange County, where Renesas had turned over an entire lunch session, packed with hundreds of engineers, to Dean Kamen, so that Kamen could encourage attendees to participate in the program. (Wikipedia says: "FIRST (For Inspiration and Recognition of Science and Technology) is an organization founded by inventor Dean Kamen in 1989 to develop ways to inspire students in engineering and technology fields. The organization is the foundation for the FIRST Robotics Competition, FIRST LEGO League, Junior FIRST LEGO League, and FIRST Tech Challenge competitions.") I remarked to Brian that I admired the program as Kamen explained it, but I

had some questions, which I'll bring up in a later blog. Brian told me that he had been a FIRST volunteer for years, that he was extremely positive about the program and that he had written an article for the American Radio Relay League (ARRL) Website, "The Ham Radio Spirit Lives -- in Robots?," Then he sent me a email, with more about his personal experience in the program than we had covered on-air. I have his permission to repeat it here:

//
ARNewsline Report 1842 Nov 30 2012:

Posted: 30 Nov 2012 02:05 AM PST
http://www.eham.net/articles/29432

The following is a QST. The FCC issues a rule making proposal aimed at implementing the 2007 World Radiocommunications Accords; the NTSB says it wants to end all kinds of distracted driving; South Africa's ham radio community is told it will have to re-apply for their licenses and the 8th Global Amateur Radio Emergency Communications Conference is called a major success. Find out the details are on Amateur Radio Newsline report number 1842 coming your way right now.

//

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.info

```
Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.2 2011/11/02 04:08:53
Posting-Frequency: posted twice monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team had decided to consider |
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. After a successful trial |
period (90 days, through early July 2009), we decided to adopt this |
change permanently. |

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.
```

Please direct any comments, questions, or criticisms to
rec-radio-amateur-moderated-request@panix.com.

SARL NEWS - SUNDAY 02 December 2012

You are listening to ZS6SRL, the official radio station of the South African Radio League, the national body for amateur radio in South Africa. The SARL broadcasts a news bulletin every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream, visit www.sarl.org.za, click on 'Amateur Radio Today' and follow the links for details. For audio via Echolink, connect to ZS0JPL-R.

You can download this bulletin and previous ones from www.sarl.org.za and also subscribe there to receive future bulletins by e-mail.

Your newsreader this morning is (name), (call sign), on 145,725 from Pretoria, with relays on 7,066 MHz and 3,695 MHz SSB. (Other news readers change to suit).

SILENT KEY

It is with regret that it must be announced that the key of E I Terblanche, ZR2ET, became silent recently.

We extend our deepest sympathies to the relatives and friends of the deceased.

(PAUSE)

IN THE NEWS TODAY:

SARL LAUNCHES THE ANTENNA DEFENSE FUND

RECIPIENTS OF THE MTN RADIO AMATEUR OF THE YEAR AWARDS ANNOUNCED

NOMINATION OF COUNCILLORS

You are listening to ZS6SRL. Stay tuned for more details on these and other important and interesting items.

SARL LAUNCHES THE ANTENNA DEFENSE FUND

While Radio Amateurs are exempted from having to apply for environmental scoping for antenna towers and structures under 15 metres, there are compulsory building plan and zoning Scheme regulations approvals required which administratively are a major challenge. The fees for a building plan approval vary from metro to metro but are on average R2 000. To this must be added the cost of advertising for objections in two newspapers which on average will cost around R3 000. The total cost for the basic application is around R5 000. There is always the possibility that someone may lodge an

objection which can cause further complications and legal fees.

The Council of the SARL has decided to launch an appeal to the relative authorities to have amateur radio towers and antenna structures under 15 metres exempted from the current building regulations. To achieve this legal, environmental and structural experts will have to be engaged to prepare a submission.

At this stage it is expected that this may involve expenditure of up to R50 000. To fund this vital initiative the SARL Council has set up the Antenna Defence Fund (ADF) and is seeking contributions from radio amateurs. To contribute please make an electronic transfer to the SA Radio League at ABSA bank. The account number is 407 158 8849, the branch code is 632 005, also send an email to adf@sarl.org.za with the payment slip showing ADF, your name and callsign. A web page will be set up to list all the donors and information on the progress being made with the project. This is the ideal opportunity for members of the SARL and NON members to contribute to a very important case for amateur radio.

This project will be of the benefit to all radio amateurs and as it may affect you in the future we urge you to make a contribution. Council will, in their budget submission to the AGM in April 2013, make a proposal for some funding from the accumulated funds possibly on a Rand for Rand basis, in other words match the donations received by the ADF with an equivalent amount from reserve funds.

RECIPIENTS OF THE MTN RADIO AMATEUR OF THE YEAR AWARDS ANNOUNCED

At a gala lunch held on Wednesday last week, the South African Amateur Radio Development Trust presented the 2012 MTN Amateur Radio of the Year Awards.

The MTN Radio Amateur of the Year award was presented to Colin de Villiers, ZS6COL, for his support of Amateur Radio and the SARL. Colin has been involved in the creation and maintenance of the SARL database, liaison with ICASA to align the records of both organizations and many IT support projects that assist the office of the SARL to run efficiently. His latest project was the setup of an automatic receipt system, mailing members the confirmation of payment and their password for the SARL members section of the web.

"Colin has been of tremendous support of not just to the SARL but for all of amateur radio". SARL Vice President, Geoff Levey, ZS6GRL, said in his address congratulating the winners,

The MTN Garth Milne Technical Innovation Award was presented to Frederich Wolff, ZS6FZ, for his technological support at the 2012 Radio Technology in Action symposium and the development of a Software Defined Radio project that will continue to feature in future RTAs. Frik is also the SARL VHF, UHF and Microwave manager responsible for band planning and repeater coordination.

The MTN Amateur Radio Community Service Award was presented to Keith Lowes, ZS5WFD, for the role he is playing in HAMNET KwaZulu-Natal and the support of many sporting events such as the Comrade Marathon and cycle races. Currently he is preparing a team to support the annual Duzi Canoe Marathon.

The three award recipients were presented their awards, a 2012 ARRL Hardcover Handbook and a certificate, by Grace Mothusi, Senior Manager Public Sector MTN Business. They each also receive R1 000.

The Trustees made a special award to Dawie Conradie, ZR6DHC, for his promotion of Amateur Radio in Amateur Radio Today and on community radio. Dawie receives a 2012 ARRL hardcover handbook and a certificate of appreciation. See more on www.amateurradio.org.za.

NOMINATION OF COUNCILLORS

The time for nominating councilors and submitting motions, is approaching. The SARL is requesting each affiliated club, to nominate one or more of its members as councilors.

A councillor must be nominated by an SARL member and and seconded by another SARL member. The nomination must be accompanied by a short amateur radio based CV as well as a signed statement by the nominee that he is willing to serve as a councillor. Councillors should be experienced amateurs who can spend some hours per week on SARL business and can take part in council teleconference meetings.

The SARL makes extensive use of volunteers. Councillors and many other amateurs having special skills or experience, contribute their time and knowledge.

To operate effectively, many different skills are needed. At the moment it seems that there is a special need for a youth co-ordinator, for amateurs with website and database administration skills, for a forum administrator, an office manager to name but a few. There is also a need for more general skills.

Please send in your nominations now, there is no advantage in waiting until the last minute. Send nomination to secretary@sarl.org.za.

NEW MEMBERS

The SARL welcomes the following new amateurs and prospective amateurs as SARL members: Petrus van Niekerk - ZSL1051 Warwick Chapman - ZSL1052 Kobus Chamberlain - ZSL1053

PRETORIA AMATEUR RADIO CLUB SUMMER FLEA MARKET

The Pretoria Amateur Radio club will be hosting their last flea market for this year, next Saturday, 8 December 2012 at PMC in Keuning Street, Silverton. The starting time is 08:00. If you want to book a table or if you need more information, contact Almero, ZS6LDP, on 083 938 8955 or by email to almero@up.ac.za.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low levels. Crackling with C- class solar flares, sunspot AR1623 is currently the most active region on the solar disk.

For those who want to do their own frequency predictions, the expected effective sunspot number for the week will be around 50.

All the bands from 20 to 10 m will provide lots of DX fun with 15 m providing the best openings with 20 m not far behind. There will also be frequent 10 m openings.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS 02 December - SARL Digital Competition. 8 December - Pretoria Amateur Radio club flea market starting at 08:00. 31 January 2013 - Last day for submission of nominations for councilors for the next term and motions for the 2013 AGM.

SARL News invites clubs and individuals to submit news items of interest to radio amateurs and short-wave listeners. Submit news items - if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp, not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to Amateur Radio Today every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area, with relays on 7 082, 7 205 and 17 760 kHz. There is also a podcast by ZS6RO. For a web-stream and Echolink by ZS6FCS, visit www.sarl.org.za, click on 'Amateur Radio Today', go down the green column and click on 'LISTEN ON THE WEB'. A repeat transmission can be heard on Mondays at 18:30 UTC on 4 895 kHz ((A new time and frequency!). Reception reports are invited. We are particularly interested in reports of the 4 895 kHz transmission on Mondays at 18:30 UTC as the frequency is close to the proposed new amateur allocation near 5 MHz. Reception reports from all areas in South Africa would be useful in our bid to ICASA for frequencies pilot studies. Send reports to artoday@sarl.org.za.

Sentech sponsors the transmissions on the non-amateur frequencies.

You have listened to a bulletin of the South African Radio League compiled by George Honiball, ZS6NE.

Thank you for listening, 73.

/EX

Ham Operators to Participate in Emergency Test:

Posted: 01 Dec 2012 02:00 AM PST
http://www.eham.net/articles/29437

Brown County Amateur Radio Emergency Services (ARES), several area ham radio operators will participate in a simulated emergency test this Thursday in Ranger, Texas. Area coordinator Bill Fraser said the scenario is a hard freeze resulting in dangerous conditions on Ranger Hill along Interstate 20, and heaving icing knocking out all electrical power and emergency communications. The simulated emergency begins at 7: 30 Thursday morning, and includes emergency response from Taylor, Eastland, Comanche, Brown, and Erath Counties. Local ham radio operators Ray Schultze, Allen Griffith, Rich Dugger, Dale Seaburg, Cliff Conway, Johnny Gooch, Clint Wynne and Bill Fraser will participate to provide communications via ham radio. The event is to test the emergency preparedness for communications in the event of a power outage in that area.

//
Huge Telescope to Warn of Solar Storms:

Posted: 01 Dec 2012 01:55 AM PST
http://www.eham.net/articles/29436

PERTH, Australia, Nov. 30 (UPI) -- An eye on the sky in Western Australia's remote outback could potentially save the world billions of dollars by warning of cosmic catastrophe, astronomers say. The Murchison Widefield Array radio telescope unveiled Friday will give the world a dramatically improved view of the sun and provide early warning of explosive solar storms that can damage to communication satellites, electric power grids and GPS navigation systems, the International Center for Radio Astronomy Research in Perth reported. The $51 million low-frequency radio telescope will be able to detect and monitor massive solar storms, such as the one that cut power to six million people in Canada in 1989 during the last peak in the sun's activity cycle. The MWA will aim to identify the trajectory of solar storms, quadrupling the warning period currently provided by near-Earth satellites, scientist said.

DXCC COUNTRY/ENTITY REPORT: According to the AR-Cluster Network for the week of Sunday, 25th-November, through Sunday, 2nd-December there were 242 countries active. Countries available: 3A, 3B8, 3D2, 3DA, 3V, 3W, 4J, 4L, 4O, 4S, 4U1I, 4X, 5B, 5H, 5N, 5R, 5T, 5U, 5W, 5X, 5Z, 6W, 6Y, 7P, 7Q, 7X, 8P, 8Q, 8R, 9A, 9H, 9J, 9K, 9M2, 9M6, 9N, 9Q, 9V, 9Y, A2, A4, A5, A6, A7, A9, AP, BV, BY, C2, C3, C5, C6, C9, CE, CE0Y, CE9, CM, CN, CP, CT, CT3, CU, CX, CY0, D2, D4, DL, DU, E5/s, E7, EA, EA6, EA8, EA9, EI, EK, EL, EP, ER, ES, ET, EU, EX, EY, EZ, F, FG, FH, FJ, FK, FM, FO, FR, FS, FY, G, GD, GI, GJ, GM, GU, GW, H4, HA, HB, HB0, HC, HH, HI, HK, HL, HP, HR, HS, HV, HZ, I, IS, J2, J3, J5, J6, J7, J8, JA, JT, JW, JX, JY, K, KG4, KH0, KH2, KH6, KL, KP2, KP4, LA, LU, LX, LY, LZ, OA, OD, OE, OH, OH0, OK, OM, ON, OX, OY, OZ, P2, P4, PA, PJ2, PJ4, PJ5, PJ7, PY, PY0F, PZ, R1FJ, S2, S5, SM, SP, ST, SU, SV, SV5, SV9, T30, T7, T8, TA, TF, TG, TI, TJ, TK, TL, TR, TT, TU, TY, TZ, UA, UA2, UA9, UK, UN, UR, V2, V3, V4, V5, V6, V7, V8, VE, VK, VK9N, VP2E, VP2V, VP5, VP8, VP8/h, VP8/o, VP9, VR, VU, XE, XU, XW, XX9, YA, YB, YI, YK, YL, YN, YO, YS, YU, YV, Z2, Z3, Z8, ZA, ZB, ZC4, ZD7, ZD8, ZD9, ZF, ZL, ZL9, ZP, ZS

* PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later" (WFWL).

5W, SAMOA (Update). Ralph, H44RK, will be active as 5W0RK from Apia between December 8th and March 3rd (2013) from Samoa. Activity will be on 20-10 meters using SSB and the Digital modes. QSL via NR6M.

6Y, JAMAICA. Lester, W8YCM, is currently on his annual trip to Negril, Jamaica (NA-097), and will be active as 6Y5/W8YCM until the new year. Activity has been on 17-10 meters using SSB. QSL via his home callsign.

7P, LESOTHO. Chris, ZS6RI (ex-9J2RI, ZD9IR, 5H9IR, EL8RI), will be active as 7P8RI from Lesotho beginning December 17th for 20 weeks - with a two week on and two week off rotation (similar to his 9J2RI activities). Activity will be on all HF bands using CW, SSB and the Digital modes. QSL via details on QRZ.com. For updates, visit his Blog page at: http://zs6ri.blogspot.co.uk

9M6, EAST MALAYSIA. Steve, 9M6DXX, informs OPDX and its readers: "Hi all, Disappointed with the current poor conditions and high noise level at my home QTH, I have booked two night's accommodation at a seaside hotel where I am able to put up vertical antennas by the sea. I plan to be active (SSB only) as 9M6DXX (IOTA OC-088) on 8 and 9 December, using 400 watts to an 80m quarter-wave inverted-L with 50 ft vertical section and feedpoint just inches above the sea at high tide. On 10m I will use a vertical dipole, again right on the ocean, and will participate part-time in the ARRL 10m Contest (Single-Op, HP, SSB). On the other bands I will use a Butternut HF6V-X with 12/17m add-on kit, elevated about 15 feet above the sea. I will be checking 80m SSB around the greyline for Brazil, northern South America, the Caribbean and eastern USA and Canada around 1000-1050 UTC and 2130-2215 UTC on both days. I will also look for northern and western Europe on 80m SSB between 1500 and 1800 UTC. If propagation is no good on 80m I will try 40m instead. QSL 9M6DXX via M0URX, direct or Bureau. You may also use M0URX's OQRS service <www.m0urx.com/oqrs>, but since I am collecting cards for 5BDXCC, I would prefer it if you sent your own QSL card to M0URX either direct or via the RSGB Bureau. The logs will be uploaded to LoTW within a few days of the operation.
73, Steve, 9M6DXX"

ANTARCTICA NEWS (By Gianni, I1HYW).....
* Bharati Station (WAP IND-04) is now QRT. After a bit of pain (at the beginning of the season, propagation wasn't good), on the last 20 days of activity, Bhagwati, VU3BPZ/P, had made over 400 QSOs bringing his total to nearly 1500, even if with several dupes. Yesterday (Nov. 26th) his "Inverted V" antenna (RFI HFX400-ST, donated by Oleg Sakharov, ZS1ANF/RI1ANF) has been taken down and packed with his RTX, ready to be moved on board of "P/S Ivan Papanin", from where Bhagwati thinks he will be active between/around December 5-6th, as VU3BPZ/MM. The daily sked which was set up (on 14180 & 14243 kHz +/- 2 kHz between 1630-1745z) did allow several EU stations, as well as NA, VK/ZL, JA and VU stations, to work this brand new "Indian Bharati Station" (WAP IND-04), located at Larsemaan Hills 69 °S, 76° E in Antarctica. Thanks to those who put spots on the Packet Cluster and made contacts with Bhagwati, encouraging him to be on even if it cut hours of sleep to his rest time. There won't be any Ham activities

from Bharati Base for the next couple of years, so those who did take advantage from this 2012 activation were lucky. On the way home, a stop is planned at the Maitri Base (WAP IND-03) where it will be possible for Bhagwati to do a short operation (2-3 days) from there as well. QSLs for VU3BPZ/P have just arrived from the printer, and the QSL Manager I1HYW, is starting immediately to answer the cards received directly. Information on the next activity by VU3BPZ will be on WAP website (www.waponline.it) in due course.

* Novo Runway-Antarctica (WAP MNB-06). Alex, RI1ANR, is currently active from Novo Runway (located few miles away the Novolazarevskaya Station WAP RUS-09). Since he was able to get little more free time, Alex did some checking on his antenna and other radio equipment and all is working fine now. During the evening of Nov. 26th, he made 60 QSOs. This is a very busy time for him now as there are a lot of flights bringing personnel to the base for the turn-over. Alex will be there until March 2013. QSL for RI1ANR goes via RK1PWA.

C6, BAHAMAS. Gil, N2GG, will be active as C6AGG from Grand Bahama Island (NA-001) between now and December 13th. Activity will be holiday style on 80-10 meters using mostly SSB with some CW. QSL via N2GG.

C6, BAHAMAS. Drew, N2RFA, will once again be active as C6ABB from Nassau, Providence Island (NA-001, WLOTA 1115) between February 10-21st (2013). Activity will be on 80/40/20/17 meters. He plans to operate on some of the Digital modes (PSK31, RTTY and possibly SSTV). QSL via his home callsign direct or LoTW and also eQSL.

IOTA NEWS.............
EU-009. Russell, G5XW, will once again be active as GM5XW from the mainland Orkney Islands (IOSA OR01, SCOTIA OI14, WLOTA 1652) between December 7-11th. QSL via G5XW, direct only (QRZ.com).

SA-049. Members of the Ushuaia Radio Club are planning a DXpedition to Redonda Island sometime in February 2013. Callsign is expected to be LU8XW/X. More details will be forthcoming.

ISWL CALLSIGNS (For December). The following ISWL club callsigns will be
used throughout the month of December:
GX4BJC/A - Operated from Bude, in Cornwall, by Mike, M0SMJ.
(/A WAB Square ◆S20 - England & IOTA ◆U-005).

MX1SWL/A - Operated from Hartford, in Cambridgeshire, by Tom, G3RPV.
(/A WAB Square ◆L27 - England & IOTA ◆U-005).

ALL QSLs will be handled by Herbie, G6XOU, and NOT the individual
operator. The I.S.W.L. is a member of the European PSK Club. All QSL
info is on <www.iswl.org.uk> or <www.qrz.com> or via <www.eQSL.cc>.
NO LoTW. I.S.W.L. Awards are available to all Hams and SWLs, see
<www.iswl.org.uk> for full details. The eQSL.cc cards ARE welcomed for
their awards.

ON, BELGIUM. Berkin, TA3J, will be active as ON/TA3J from various locations
in Belgium between December 7-11th. Activity will be on 160-2 meters using
SSB and FM. QSL via his home callsign; Bureau is preferred.

P4, ARUBA. Tom, K8CX, will be active as P40CX from Aruba between December
3-10th. Activity will be on all bands, but he will also enter the ARRL 10
Meter Contest (December 8-9th), and is leaning towards (but is not sure)
as a Single-Op/Mix-Mode/High-Power entry. QSL via K8CX.

PT0S, ST. PETER AND ST. PAUL ROCKS (Update). It was reported on the PT0S
Web page, "The PT0S team has landed in Natal the afternoon of Nov. 26th,
after a 3 day long sea voyage on the not-too-comfortable fishing vessel
Transmar II. Everybody is safe and well. We are now catching up on food
and sleep. Lots of sleep." They also mentioned, "The logs of the last 20
hours of operation were uploaded. Please note that these logs do not
contain corrections. (Please also note that it may take several days
for LoTW to post the uploaded QSOs)." For more details, please see their
Web page. Also, a summary of the PT0S expedition, written by George,
AA7JV, is now available for download at: http://pt0s.com/PT0S_Summary.pdf
Remember to QSL via HA7RY. The PT0S's log is available on their Web page
and ClubLog at: http://pt0s.com
https://secure.clublog.org/logsearch/PT0S

NEW QSL MANAGER. Rex, NR6M, is reportedly now the new QSL Manager for H44USMC, the special event callsign commemorating 70th anniversary since the landing by U.S. Marine Corps troops on Guadalcanal.

NH8S QSL STATUS/UPDATE. OPDX was informed [edited]: "Joe, AA4NN, our QSL Manager has processed all QSL requests from OQRS and direct mail. Envelopes and QSO labels are prepared for the QSL cards. The cards were shipped from Italy and we await their arrival. As soon as they arrive, all cards will be mailed.
LOTW confirmations have been uploaded for those that have donated more than 10 USDs to the DXpedition. Remaining QSOs will be uploaded in batches starting December 1st.
Thanks for all for your NH8S QSOs and financial support of the DX-pedition. It is greatly appreciated.
73 and Best DX....Joe/W8GEX and Craig/K9CT co-leaders"

QSL RECEIVED VIA LoTW: 4Z5MU, 5B4AJC, 5C5W, 5R8IC, 5U6E, 5X1NH, 9J2CA, 9J3A, A92IO, AP2IA, BD7LMD, CO2JD, CR3A, CT9/CT1FFU, D4C, D2QV, D64K, E51M, E77DX, EA8/DL3KVR, EM1KY, FP/VA2WA, HC6EP, HH2B, HK3TY, JW0HR, NH2T, OD5ZZ, PJ2T, PJ7PT, PT0S, PZ5RA, S52OP, TI2HAS, TL0CW, UY5AR, VE8EV/P, VP2V/AA7V, XV2KK and YI1RZ

QSLS RECEIVED VIA MAIL: 3D2C, 3D2GC, 4S7LSG, 4S7NE, 5T5BV, 5U5U, 7O6T, AP2IA, D3AA, D64K, OA7/DF7NX, HB0/E77QJ, KH8/JA2ZL, RI1ANF, RI1FJ, T6LG, TK/DL4FF, TT8TT, XU7AFU, XX9THX, Z30U, Z81D and ZL7A

QSLS RECEIVED VIA THE BUREAU: BD1BYV, BD1ISI, DU1UGZ, FM5CD, PP0T, RN0SRR, SP2Y, T70A, T77NC, TT8PK, UK6AC, UK7AZ, UK8AKK, XU7TZG, YI1RZ, ZM2AGY, ZP4KFX and ZS1TMJ

TM101, FRANCE. Jean-Paul, F8BJI, will be active as TM101O (Tango Mike One Zero One Oscar) between now and December 15th. Activity will be on RTTY (till 250 bauds), Thor4 and Thor8. QSL via his home callsign.

V3, BELIZE. Operators John/AD8J and Doug/W3NO will be active as V31NO in the ARRL 10M Contest (December 8-9th) as a Multi-Single entry. Outside the contest (before and after), they will be on all bands 160-10 meters on CW and SSB. QSL via W3NO.

V5, NAMIBIA. A German group will be active as V5/homecall starting early December and with some operators being active until the first weeks of 2013. Look for the following stations to be active:
V5/DJ2BQ - Operator Ewald; January 4-18th; 80-10 meters using RTTY; QSL via DJ2BQ.
V5/DJ2HD - Operator Mathew; December 22nd-January 12th; 160-10 meters using SSB and RTTY; QSL via DJ2HD.
V5/DL3DXX - Operator Dietmar; December 22nd-January 2nd; 160-10 meters using CW and SSB; QSL via DL3DXX.
V5/DK1CE - Operator Ulmar; December 22nd-January 2nd; 160-10 meters using CW; QSL via DH3WO.

XT, BURKINA FASO (Update to OPDX.1088). Members of the "Italian DXpedition Team", who announced last week that their next DXpedition would be to Burkina Faso between February and March 2013 (dates are approx.), reported that they received the callsign XT1T. This will be a 15 day operation on all bands and all modes. Also mentioned are the operators who are Alfeo/I1HJT, Silvano/I2YSB, Vinicio/IK2CIO, Angelo/IK2CKR, Marcello/IK2DIA, Stefano/IK2HKT, Gino/IK2RZP and Mac/JA3USA. The pilot station is IK7JWY, and the pilot station for the 6m band is IK0FTA. Software Management (real-time log online) will be by IH9GPI. Now available on their Web page is a survey for both bands and modes needs. The official Web site is: http://www.i2ysb.com/idt
Official forum is: http://www.hamradioweb.org
Look for more details to be forthcoming.

XU, CAMBODIA. Members of the "Foundation for Global Children" (FGC) will be on another DXpedition to the "Kingdom of Cambodia" (XU) to support a vocational training center for persons with disabilities, especially tragic landmine victims. The center teaches skills such as repairing radio, TV and motorcycles so that they can become an active member of society and can be self-supported. The FGC will once again use the callsign XU1A between December 5-17th. This DXpedition will also reunite some of the 1998 XU1A operators/members. Operators mentioned are Zorro/JH1AJT (Team Leader), Jay/JA1TRC, Aki/JA4EKO, Masaru/JA5AQC, Champ/E21EIC, Kazu/JH1OGX and possibly some other operators. Activity will be on 160-10 meters (hopefully 6m also) with a focus on 160/80/75 meters using CW, SSB and the Digital modes. They plan to have three stations operating simultaneously using 2x Yagis, DP and GPs. QSL via JH1AJT: P.O. Box 8, Oiso, Naka, Kanagawa 259-0111, Japan (or via JA Bureau). ClubLog and OQRS will be available later. PLEASE NOTE: Due to the Water Festival activities between November 27-29th in Cambodia, they may have some delays in customs to clear their equipment shipped beforehand. However, they will bring one set including antennas with them to start their operation as scheduled.

YN, NICARAGUA. Scott, K7ZO, will once again be active as YN5ZO between December 4-10th. Activity will be on 40-10 meters, including 30/17/12m, using SSB and RTTY. He plans to be in the ARRL 10M Contest (December 8-9th) as a Single-Op/Mode-SSB/High-Power entry. Antennas are a Spiderbeam for 20-10m and a 40m dipole. QSL via K7ZO and LoTW.

ZL9, CAMPBELL ISLAND (Update). Members of the Hellenic Amateur Radio of
Association of Australia (HARAOA) are now active as ZL9HR from Campbell
Island (OC-037, WFF ZLFF-019) as of 0500z, December 1st, and will operate
until December 9th. The team had a bumpy ride getting to the island, but
landed on November 30th. Activity will be on 160-6 meters using all modes.
Before going to print, it was reported on DX-World.net (on Sunday), "The
whole team have been given permission to stay overnight on the island.
So far unknown if this will be a regular occurrence. Furthermore, it's
come to light that four of the team were slightly injured during the
voyage to the island and a Spiderbeam antenna has been lost/broken."
Remember QSL via EB7DX direct, LoTW or use the OQRS for Bureau and
direct requests. Also, the first set of ZL9HR logs are now available
through 0331z, December 2nd, and have been posted on their Web page
and ClubLog at: http://www.campbell2012.com/index.php/log
https://secure.clublog.org/charts/?c=9HR
For more information and updates, visit their Web site at:
http://www.campbell2012.com
ADDED NOTE: Before sailing, Tommy, VK2IR, was able to fit in a short
interview with the New Zealand national radio station to talk about
the ZL9HR DXpedition to Campbell Island and Amateur Radio in general.
To hear the broadcast, go to:
http://www.radionz.co.nz/national/programmes/morningreport/audio/2539655/rad
io-operators-sail-for-campbell-island

ZK3, TOKELAU. Operators Hans/DL6JGN and Guenter/DL2AWG will be active as
ZK3N from Nukunonu Atoll (OC-048) between April 23rd and May 8th (2013).
Activity will be on 80-10 meters using CW, SSB and the Digital modes.
They will be using a TS590 with a Tokyo Hy-Power solid state amp; K3 with
a 500 watt solid state amp; AV640 and Tripod Leg for 40-10 and GP for 80m.
QSL via DL2AWG. Watch QRZ.com for possible updates.

ZZ100, BRAZIL (Special Event). Look for special event station ZZ100FC from
Calcanhar Lighthouse to be active between now and December 3rd. Activity
is to celebrate the 100th anniversary of the construction of the light-
house. Operations will be on CW, SSB and the Digital modes. QSL via PS7YL
(info on QRZ.com).

Radio News Bulletin
Sunday 2nd December 2012

IRTS Technical Panel

The IRTS Technical Panel is a group of volunteers who have expertise in, or experience of, different aspects of amateur radio. The e-mail address irtstech /at/ irts.ie is a single point of contact for communicating with the Panel. Our aim is to help radio amateurs with technical or operational problems.

Send your question to irtstech /at/ irts.ie. Provide as much information as possible, including details of attempts already made to deal with the issue in question.

Contest News

One of the bigger international CW contests - the CQ Worldwide DX Contest - took place last weekend, filling much of the contest bands with CW, music to the ears of CW fans! For 10 metres and 15 metres this was a weekend of two halves - with disappointing conditions on Saturday, but much improved propagation on Sunday.

Quite a few EI stations were heard, with the East Cork Group EI7M, trying out their new antennas, reporting almost 6,000 QSOs. We also heard Douglas EI2CN, Michal EI3KG, Niall EI4CF, Ark EI9KC and Brendan EI6IZ.

South Dublin Radio Club Christmas Party 2011

This year's South Dublin Radio Club Christmas Party will take place on Tuesday the 11th of December.

The venue will be the same as last year, "The Morgue," Templeogue Village from 8.00 pm until late.

Members of other clubs and visitors are as usual very welcome to this social event. Limited free food will be available for paid-up members & visitors can choose from the bar menu until 9.00 pm.

South Eastern Amateur Radio Group

The South Eastern Amateur Radio Group's Christmas get together takes place on Friday the 7th of December in Kilkenny city. The general plan is we intend to meet in Langton's Bar 67 John Street, Kilkenny around 7:30 to 8 o'clock. Langton's is a lively spot with a few different bars in there and a restaurant if anyone wants to get some food. A raffle will be held on the night with top prize of a handheld radio. Check out our website www.searg.com or our Facebook page for more details or directions etc. For anyone who intends coming down and maybe cannot locate us on the night you can contact the club P.R.O Sean EI2HZB on 083-1379764 who will know the whereabouts of the group.

Opportunity for Young Ham Radio Operators

Amateur Radio Supplies in Haverhill, Massachusetts, USA have contacted us with news of a fantastic new program to support youth activity on the HF bands. They seek to help a few lucky young hams get on the HF bands and make some contacts! Do you know any deserving young hams? They will be giving away 3 complete HF stations per year in order to support activity on the ham bands. Full details can be found at the following link http://www.amateurradiosupplies.com/youth-s/222.htm or by contacting Ger McNamara EI4GXB, IRTS Youth Coordinator.

DX News

Zorro JH1AJT will be in Cambodia from 5 - 17 December. He will use the callsign XU1A and be QRV on all bands 160 - 10m CW and SSB. QSLs go via the JA bureau.

Renner PY7RP will spend a few days on the island of Fernando de Noronha from 6 - 10 December. This is a separate entity for the DXCC award and the callsign will be PY0FRP. QSLs go via his home call.

Ralph H44RK will be active from Samoa with the callsign 5W0RK from 8 December until 3 March 2013. He hopes to be QRV mainly on 20 - 10m. His QSL manager is NR6M.

Mario CT1FTR is now in Sudan and has obtained the callsign ST2FT. QSL info is direct to CT2GBU.

Haru JA1XGI will be active from the island of Yap in Micronesia from 5 - 12 December. His call is V63XG and he will be 40 - 6m, CW, SSB and digital. The Islands on the Air reference for this one is OC-012. QSL to his home call.

ZL9HR DXpedition

The much-anticipated DXpedition to Campbell Island, a sub-antarctic island south of New Zealand, will be starting shortly. Campbell Island's antipode (the point on the Earth's surface diametrically opposite to its location) is not far off the south-west coast of Ireland. Nigel G3TXF has pointed out that this should provide considerable propagation enhancement across the spectrum for EI

stations near the antipode, due to the phenomenon of "antipodean focussing" which reputedly can boost signal levels between stations located near their respective antipodes. Those with QTHs in Cork and Kerry may be very popular over the next few weeks!

Items for inclusion in next week's Radio News can be submitted via e-mail to "newsteam /at/ irts / dot / ie" for automatic forwarding to both the radio and printed news services. Urgent news items for the radio news maybe telephoned to the radio news editor, Aidan, EI7JC on 085 7100511.

Please note that items for the radio news should reach the editor no later than midday on Thursday in order to be guaranteed inclusion in the following Sunday's bulletin.

Singing the Praises of Unsung Heroes:

Posted: 02 Dec 2012 01:28 AM PST
http://www.eham.net/articles/29439

A couple of weeks ago, I spoke with David Sumner, the CEO of the American Radio Relay League (ARRL), which represents the amateur-radio community. Sumner was to be the keynote speaker at the Radio Club of America's annual awards banquet in New York City a couple of days later. Since it had been a while since I last spoke with him -- far too long, really -- I thought this would be a good time to catch up. He told me that amateur radio was alive and well. This surprised me, though I don't really know why. I suppose it's because a lot of things that were popular in my youth -- hula hoops, for instance -- have fallen by the wayside in this era of technological one-upmanship that makes the Cold War arms proliferation look like a potato-sack race. Sumner completely understood my reaction. "The perception is that we're stuck in the Sixties," he said. "But the number of licenses continues to grow. In fact, this is the sixth straight year of growth." He attributed the increased popularity in part to the do-it-yourself movement that is sweeping the country -- if you doubt this, then spend some time surfing your cable or satellite system's program guide. According to Sumner, DIY clubs are popping up from coast to coast. He told me of one in Washington, D.C., that operates in a church basement.

Titanic Radio Signal Man Inspires New Stage Show:

Posted: 02 Dec 2012 01:26 AM PST
http://www.eham.net/articles/29438

The man who picked up the distress signal from the Titanic over his amateur radio from his garden shed in Pontllanfraith has inspired a new stage drama. Whispers On The Waves is being staged by Odyssey, the inclusive community drama group from Cardiff-based Hijinx Theatre. Throughout the performances, which take place in the intimate Weston Studio at the Wales Millennium Centre in Cardiff next week, Odyssey's cast members eavesdrop on stories great and small from the last century as they wait for Christmas to turn the corner. With music, laughter, tales and tears, this is a theatrical adventure for all the family. Whispers On The Waves -- inspired by the real-life story of Welsh wireless operator Artie Moore who heard a distress signal from Titanic before news of the disaster arrived in the UK - also features children from Meadowbank School in Cardiff and music

students from the RWCMD.

GB2RS NEWS

Sunday 2nd December 2012

The news headlines:

* Mid Severn Valley RAYNET called out in support of flood preparations

* Only four weeks to the start of the RSGB Centenary

* South African radio amateurs to reapply for licences next year

Available members of Mid Severn RAYNET group were tasked by the Worcestershire County Council County Volunteers Emergency Committee, or CVEC, during the afternoon of Sunday 25 November. This was at very short notice for the volunteers. Due to the rising waters of the River Severn, the Emergency Planning Officers were concerned at the potential for flooding of adjacent residential properties in parts of Worcester city centre, some of which had been constructed after the floods of 2007. Multi agency teams from CVEC were tasked with notifying homeowners of the threat, issuing warnings advice and leaflets, and reporting back to the Social Services details of residents who might be unable to self help and evacuate, and those who could require rest centre assistance. Tony, G8WOX, Paul, G6DQM and Max, M0VNG deployed with the teams. The teams completed the task into the early evening and stood down, with residents most appreciative of the efforts made to alert them.

With only four weeks to go to the start of the RSGB Centenary activities, the website www.rsgb.org/centenary has details of how you can get involved. RSGB President Dave Wilson, M0OBW will start activity with G100RSGB operating with the Runcorn and Widnes ARS on 1 and 2 January. Contacts and loggings of the special event callsign will count towards the RSGB Centenary Award. Follow activity in both RadCom and on the website throughout 2013.

A South African law stipulates that an amateur radio licence can only be renewed for up to five years, after which a new application has to be submitted. Because of this, all of that country's radio amateurs will be required to re-apply for their licence for the period of 1 April 2013 to 31 March 2018. No action is needed now, and further details are expected to be made public in the next few weeks.

The national amateur radio society of Luxembourg has changed its name to Radioamateurs du Luxembourg. The address and other details remain unchanged. Please update your records accordingly.

The fix for the Logbook of The World bug was implemented on 28 November, thanks to the efforts of Michael Keane, K1MK. If you uploaded your logs by e-mail they won't need to be re-submitted. If your most recent upload via the website was made before 2100UTC on 25 November and it has not yet been processed, the file should be resubmitted. There should be no need to resubmit logs uploaded since 2100UTC on November 25, which would include all CQWW CW DX Contest logs submitted after the end of the contest.

And now for the details of rallies and events for the coming week

Today, 2 December, the Bishop Auckland Radio Amateurs Club Rally will take place at Spennymoor Leisure Centre, Co Durham DL16 6DB. Doors open at 10.30am and entry is £2 with accompanied under-14s free. There will be trade stands, a Bring & Buy and a talk-in station. More details can be obtained from Mark, G0GFG on 01388 747 497.

The final rally of the year takes place next weekend, on 8 December. The South Lancs Winter Rally will be held in the Bickershaw Labour Club, Bickershaw Lane, Bickershaw, Wigan. Doors open at 10am for the public and entry is £1.50. There will be a talk-in station and a Bring & Buy as well as special interest groups. More details from Allan, 2E0RAG on 07533 970 841.

Copyright © RSGB 2012. Not for public release before Monday 3 December 2012 except as a GB2RS broadcast. Now for the news of special events

Wakefield District Radio Society will be operating GB0IDD for the UN International Day of Persons with Disabilities this weekend until 3 December from the Wakefield 23rd Troop Scout HQ. The aim of the Day is to raise awareness and understanding of disability issues. Operation will be mainly on SSB on the 14 to 28MHz bands. QSL via eqsl.cc only.

5G12ITD is on the air until 16 December in Morocco to commemorate UN Day for Tolerance. They will be active all bands and all modes. QSL via RW6HS.

And now the DX news compiled from 425 DX News and other sources

Robert, AK4BM/C6AGT will be operating from Green Turtle Cay, which is IOTA reference NA-080, from 12 December to 1 January. He hopes to activate other small islands in the group during the day and Green Turtle Cay in the evenings, local time.

A rare DXCC entity will be on the bands from 28 November until 9 December. This will be a multi-national group operating from Campbell Island, OC-037, using the callsign ZL9HR. They will be QRV on all bands and the QSL manager is EB7DX.

A large Polish group will activate the West African country of Mauritania from now until 10 December. The callsign to look out for is 5T0SP and the QSL manager is SP6FXY. They will be on 6 to 160m using CW, SSB and RTTY.

Retu, OH4MDY is returning to Vietnam where he will reactivate his XV2RZ callsign until 10 December. He will operate on 6 to 20m using CW and SSB. He requests direct QSLs to his home address in Finland.

Now the contest news

The third event in this season's Super League series takes place today, 2 December. The 144MHz AFS contest runs from 0900 to 1700UTC. Using all modes on the band the exchange is signal report, serial number and locator.

The ARRL 160m Contest finishes its 42 hours stint at 1600 today, 2 December. Work the USA, US Territories and Canada only in this CW event. The rules say the segment 1830 to 1835 should be used for intercontinental QSOs only. The exchange is signal report, although W and VE stations also send their ARRL or RAC section.

Tuesday 4 December sees the 144MHZ UK Activity Contest taking place from 2000 to 2230UTC. Using all modes the exchange is signal report, serial number and locator.

Next weekend, on 8 and 9 December the ARRL 10m Contest takes place from 0000 to 2359UTC. In this CW and phone event everyone works everyone. ARRL event has numerous entry categories, so please check the rules online to find an appropriate one for yourself. The exchange is signal report and serial number, although W, VE and XE stations will send their State or Province code too.

And now the solar factual data for the period from Friday the 23rd to the 29th of November compiled by Neil Clarke, G0CAS on Friday the 30th of November

Several large and magnetically complex sunspot regions appeared during the period and most produced a number of C class solar flares every day. However, solar activity increased to moderate levels on the 27th and the 28th when two M class solar flares took place on the 27th and one on the next day. Solar flux levels declined from 126 units on the 23rd to 113 by the 29th. The average was 119 units. The 90 day solar flux average on the 29th was 123 units, that's one unit up on last week. X-ray flux levels increased to peak at B5.8 units on the 26th but then declined to B3.9 by the end of the period. The average was B3.9 units. Geomagnetic activity was quiet every day except for the 24th, when a coronal mass ejection arrived and a weak geomagnetic disturbance took place during the first half of the day. The Ap index for the day

Copyright © RSGB 2012. Not for public release before Monday 3 December 2012 except as a GB2RS broadcast. was 15 units The average was Ap 5 units. Solar wind data from the ACE spacecraft saw solar wind speeds increase from 300 kilometres per second on the 23rd to 550 by the 26th. Speeds then gradually declined to 330 kilometres per second by the end of the period. Particle densities increased to 22 particles per cubic centimetre on the 23rd and then increased further the next day to 44 particles per cubic centimetre. Densities then returned to low levels

for the remainder of the period. Bz varied between minus 11 and plus 13 nanoTeslas during the disturbance and between minus and plus 3 nanoTeslas on the quiet days.

And finally the solar forecast for the coming week. This week the quiet side of the Sun is expected to be looking our way. There are though a couple of regions that will remain visible. Solar activity should be at low levels on most days but could increase to moderate levels on some days. Solar flux levels should be around 110 units but could start to increase after midweek. Geomagnetic activity should be at active levels at first due to a recurring coronal hole. However, from midweek activity should have returned to quiet levels. MUFs during daylight hours should be around 26MHz for the south and 23MHz for the north. Darkness hour lows should be about 8MHz. Paths this week to Australia should have a maximum usable frequency with a 50 per cent success rate of around 27MHz. The optimum working frequency with a 90 per cent success rate will be about 22MHz. The best time to try this path will be between 0900 and 1300 hours UTC.

And that's all for this week from the propagation team.

Copyright © RSGB 2012. Not for public release before Monday 3 December 2012 except as a GB2RS broadcast.

Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB

website, including email addresses and website links where known.

[Note to Newsreaders: Please read the local news items appropriate to the service area of your transmission.]

NEWS FOR THE MIDLANDS We start with advance notice of a new GB2RS transmission. On Sunday 9 December at 10.30am, Steve, M5ZZZ will commence a news reading via GB3LM. The repeater serves the Lincoln area and is on 145.725MHz. However, a volunteer is needed to back up this news reading. Anyone interested must be an RSGB member and be within the GB3LM service area. Volunteers should contact the GB2RS News Manager Gordon, G3LEQ, on 01 565 652 652.

Now for clubs that have several events this week. Wythall Radio Club is taking part in the 144MHz AFS Contest from 0900-1700 today and has a club net on 145.225MHz FM from 2000. On Monday there is a mock Advanced exam at 2000. Tuesday sees the Morse class from 1945 and a free 'n' easy evening from 2030. The Advanced exam is on Wednesday at 1830. The Friday shack social starts at 1930. Next Saturday sees the Christmas party from 1930 and next Sunday there's the club net on 145.225MHz FM from 2000. Details from Chris, G0EYO, on 07710 412 819.

Friskney and East Lincolnshire Communications Club is running a club net on Monday from 7pm on 144.165MHz USB, vertical polarisation. On

Wednesday there is a M3+M6 club net on GB3FR and Friday sees a club net on GB3FR. Contact the FELCC Information Line on 07554 362 020 for more information.

South Birmingham Radio Society has an open meeting and report on RSGB EGM on Monday. Tuesday sees a coffee morning in the shack between 11am and 1pm, and on Friday there's work in the shack. Contact Mick Cleary, G7RRP, on 07595 696 359.

Lincoln Short-Wave Club takes part in the 144MHz UK Activity Contest from 2000 on Tuesday. Wednesday sees G5FZ on the air from the shack and a natter night at the BSA Club. The club repeater net is on 145.725MHz from 2000 on Thursday, and Friday sees the Christmas party. Next Saturday sees the surgery in the shack from 0900. For more information contact Pam Rose, G4STO, on 01427 788 356.

South Notts Amateur Radio Club is taking part in the 2m contest on Tuesday. Wednesday sees the Advanced exam and a talk on the decatron and digitron by G8LNG. Details form Robin, G4NDM, on 01159 372 942.

Now we return to the traditional listing in date order. On Monday Aldridge & Barr Beacon Amateur Radio Club is having its Christmas buffet. Contact Albert, G0KFS, on 01922 614 169.

On Monday Welland Valley Amateur Radio Society has a 2m club net on 145.275MHz FM. For more information contact Peter D Rivers, G4XEX, on 01858 432 105.

On Tuesday Derby & District Amateur Radio Society is holding a junk sale. Contact Richard Buckby, by email to radio@dadars.org.uk.

On Tuesday Loughborough & District Amateur Radio Club is having a talk on antenna filters by Andrew, G7SEG. More information from Chris, G1ETZ, on 01509 504 319.

On Tuesday Worcester Radio Amateurs Association continues its Foundation course. Details from Rich Moles, M0UVA, via email to secretary@m0zoo.co.uk.

On Wednesday Midland Amateur Radio Society is holding an open meeting, training classes and is on air. Details from Norman, G8BHE, on 07808 078 003.

Copyright © RSGB 2012. Not for public release before Monday 3 December 2012 except as a GB2RS broadcast. On Wednesday South Kesteven Amateur Radio Society is running a club net on 145.525MHz from 20:00. Contact Nigel, M0CVO, on 01476 402 550.

On Wednesday Telford & District Amateur Radio Society is putting GX3ZME on the air and holding a committee meeting. Contact Mike, G3JKX, on 01952 299 677.

On Friday Bromsgrove & District Amateur Radio Club is having a VHF night. Contact Chris, M0BQE on 01905 776 869.

On Friday Coventry Amateur Radio Society is having part 2 of the talk by G4GEE on the journey to Svalbard. Contact John, G8SEQ, on 07958 777 363.

On Saturday Tamworth Amateur Radio Society is having a meeting. Contact secretary@tars.es for more information.

NEWS FOR THE NORTH OF ENGLAND On Monday Angel of the North Amateur Radio Club is on the air. Contact Nancy Bone, G7UUR, on 01914 770 036.

On Monday Sheffield Amateur Radio Club is having a quiz night hosted by Nevil, G3VDV. More information from Peter Day, G3PHO, by email to sarc@g3pho.org.uk.

On Monday Workington and District Radio and IT Group is holding a club meeting and is on the air. Contact Barry Easdon, G0RZI, on 01946 812 092.

On Tuesday Chester & District Radio Society is having a talk by Alistair Peacock, G3NHP. Contact Bruce Sutherland, M0CVP, on 01244 343 825.

On Tuesday Morecambe Bay Amateur Radio Society is having a members' night. Contact Sheila, on 07867 516 836.

On Tuesday Stars Radio Club is holding a club net on 145.450MHz from 7.30pm. All are welcome. Contact Ian, G7MFN for more information.

On Wednesday Denby Dale Radio Club is taking a technical look at early cinema photography. Details from Richard, M0RBG, on 07976 220 126.

On Wednesday Hornsea Amateur Radio Club is having a D-Star update by G0VRM. Contact Gordon MacNaught, G3WOV, on 01377 240 573.

On Wednesday Mid-Cheshire Amateur Radio Society is holding a Raspberry Pi evening. Contact Peter Paul Fox, G8HAV, on 01606 553 401.

On Thursday South Manchester Radio and Computer Club is having part 3 of the talk by Dave, G4UGM on the wonders of China. Details from Ron, G3SVW, on 01619 693 999.

On Thursday Spen Valley Amateur Radio Society is having a talk on the FunCube Dongle by Doug, G4DZU. Details from Russell, G0FOI, on 01274 875 038.

NEWS FOR NORTHERN IRELAND Today, Mid Ulster Amateur Radio Club is visiting the WW1 Coastal Defence Station and radio museum at Grey Point Fort, near Bangor, Co Down. On Wednesday it's the Christmas Dinner at Brownlow House, Lurgan. More information from Brian Burns, MI0TGO, by email to muarc.secretary@yahoo.co.uk

On Thursday Bangor & District Amateur Radio Club is having a talk on JT65. Contact Mike, GI4XSF, on 02842 772 383.

Copyright © RSGB 2012. Not for public release before Monday 3 December 2012 except as a GB2RS broadcast.

NEWS FOR SCOTLAND On Tuesday Livingston & District Amateur Radio Society is holding its AGM. Details from Norman, GM1CNH, on 07740 946 192.

Cockenzie & Port Seton Amateur Radio Club is running CW training classes every Thursday from 7-9pm in the local community centre. Classes will continue until the end of March 2013. This coming Friday there is a normal club night, and next Saturday it's the Christmas night. More information from Bob, GM4UYZ, on 01875 811 723.

NEWS FOR THE SOUTH EAST and EAST ANGLIA We start with clubs that have several events this week. Southdown Amateur Radio Society has its Christmas social at Chaseley today. On Wednesday the Hailsham shack is on the air. Details from John, G3DQY, on 01424 424 319.

Worthing & District Amateur Radio Club monthly Breakfast meeting at The Goring caf&#65533; this morning from 9am. On Wednesday it's the Christmas Quiz by G8MSQ. Contact John, G8FMJ, on 01273 593 232.

On Thursday 6 December Horsham Amateur Radio Club is holding its AGM on Thursday. Next Saturday sees the Christmas Dinner. Details are on the web at www.harc.org.uk.

Chelmsford Amateur Radio Society is having talks on Friday how to sell radio equipment on eBay and how to re-licence your licence. The Christmas lunch is next Saturday at noon. Contact Martyn, G1EFL, on 01245 469 008.

Now we return to the traditional listing in date order. On Monday Braintree & District Amateur Radio Society is having a social evening. For more information contact John, M5AJB, on 01787 460 947.

On Monday Burnham Beeches Radio Club is having its 75th Anniversary Christmas social. Contact Dave, G4XDU, on 01628 625 720.

On Monday Surrey Radio Contact Club is having a talk. Contact John, G3MCX, on 02086 883 322.

On Tuesday Brede Steam Amateur Radio Society is at the shack. For more information contact Steve, on 01424 720 815.

On Wednesday Chesham & District Amateur Radio Society is holding a general meeting. More details from Terry, G0VFW, on 01442 831 491.

On Thursday Cray Valley Radio Society is having a talk on DXing from W5 by Michael Streeter, WM5DX. Details from Malcolm Bryan, G8MCA, on 07906 433 965.

On Thursday Horndean & District Amateur Radio Club is having a natter night and social evening, plus mince pies. Contact Stuart, G0FYX, on 02392 472 846.

On Thursday Huntingdonshire Amateur Radio Society has its Christmas dinner for those who have pre-booked. Contact David Leech, G7DIU, on 01480 431 333.

On Thursday Lowestoft & District PYE Amateur Radio Club is having a club night at the shack. Detail from Tim Ward, 2E0TJW, on 07810 481 182.

On Thursday Shefford & District Amateur Radio Society is having a mince pie evening. Details from John Burnett, M6JBU, on 07860 804 793.

On Thursday Vange Amateur Radio Society is holding a junk sale. Contact Steve, G0KVZ, on 01268 552 606.

On Friday Crystal Palace Radio and Electronics Club has its Christmas social. Contact Bob, G3OOU, on 01737 552 170.

Copyright © RSGB 2012. Not for public release before Monday 3 December 2012 except as a GB2RS broadcast. On Friday Mid-Sussex Amateur Radio Society is having a fish & chip evening. Contact Rob, 2E0RJA, on 01444 232 129.

On Friday Radio Society of Harrow has its construction contest. More information from Linda, G7RJL, on 02083 868 586.

On Friday Reading & District Amateur Radio Club has its Christmas dinner for those who have booked. Details from Pete, G8FRC, on 01189 695 697.

On Friday Thames Amateur Radio Group is having an evening of digital modes and mince pies. Contact Pete Sipple, M0PSX, on 07940 579 116.

On Friday Wey Valley Amateur Radio Group is having a talk on the Falkland Islands by Roger Eeles, G0SWC. Details on the web at www.weyvalleyarg.org.uk.

NEWS FOR THE SOUTH WEST Exeter Amateur Radio Society has its Monday HF net on 3.675MHz at 19:45. The Tuesday 2m net is on 145.575MHz at 19:45 and on Thursday it's the 4m net on 70.425MHz from 19:00. Contact Nick, 2E0NRJ, on 01363 775 756.

On Wednesday Riviera Amateur Radio Club has its 2m net on 145.425MHz from 20:00. Contact Alan Wyatt, G2DXU, by email to rivieraarc@gmail.com.

On Wednesday Thornbury & South Gloucestershire Amateur Radio Club is having a talk on 2.4GHz by Arnie Mansell. Contact Tony, G0WMB, on 01454 417 048.

On Wednesday Trowbridge & District Amateur Radio Club is holding its Christmas social and presentation night. Details from Ian, G0GRI, on 01225 864 698, evenings and weekends.

On Thursday Cornish Radio Amateur Club is holding its main meeting. The details for this meeting in RadCom are incorrect. Details from Steve, G7VOH, on 01209 844 939.

On Thursday South Bristol Amateur Radio Club is holding a table top sale with Len, G4RZY. Details from Andrew Jenner, G7KNA, on 07838 695

471.

On Thursday Swindon & District Amateur Radio Club is holding its Christmas dinner. Contact Den, M0ACM, on 07810 317 750.

On Friday Guernsey Amateur Radio Society is meeting at 8pm in the St Pierre Park Hotel. All current members are invited and visitors are most welcome. Contact Tom Burnett, 2U0TKB, for more information.

On Friday Poole Radio Society is having revision and feedback on the Intermediate course. Contact Bill Coombes, G4ERV, by email to secretary@g4prs.org.uk.

On Friday Torbay Amateur Radio Society is having a natter night with the TARS 80m Net. For more information contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

NEWS FOR WALES On Monday 3 December Dragon Amateur Radio Club is holding an open forum for members' ideas for 2013. More information from Stewart Rolfe, GW0ETF, on 07833 620 733.

On Tuesday 4 December Carmarthen Amateur Radio Society has its Christmas party. Details from Lloyd, 2W0LLT, on 01239 711 297.

On Tuesday 4 December Wrexham Amateur Radio Society is holding its Christmas dinner. Contact Frank Bailey, M1EYH, by email to fcbailey20@btinternet.com.

# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
26 November - 02 December 2012

Solar activity reached moderate levels this week with a total of
three M-class events, two of which came from Region 1620 (S12, L=97,
class/area=Ekc/420 on 28 November). This region appeared on 20
November and remained relatively small and stable for the first six
days. On 26 November, it more than quadrupled in size (to 240 mil)
and almost doubled in spot count (to 23). The following day it
produced the first of two M-class events, an M1/Sf on 27/2126 UTC.
By this time it had evolved to a beta-gamma-delta magnetic
configuration which it would maintain for the following two days.
The rapid growth continued and Region 1620 reached 420 mils on 28
November when it produced an M2/1f event at 2136 UTC. Following this
second M-class event, the region began to decay and produced only
occasional C-class events until it crossed the west limb on 01
December.

The remaining M-class flare was attributed to Region 1618 (N08,
L=135, class/area=Ekc/450 on 23 November). This region produced
three M-class flares in the week prior. This week it only managed to
produce one, an M1/Sf on 27 November at 1557 UTC. By this time it
had shrunk to 170 millionths but retained its beta-gamma-delta
magnetic configuration. It rotated around the west limb the next
day.

The largest region on the disk this week was Region 1623 (N09,
L=340, class/area=Eko/450 on 28 November). It produced a C5/Sf flare
on 29/1205 UTC and four other C-flares as its magnetic complexity
increased to a beta-gamma configuration. It retained this complexity
for the next three days but failed to produce any more C-flares.
Nearby, Region 1625 (N15, L=338, class/area=Dso/230 on 29 November)
managed to produce six unremarkable C-flares on its first day. The
remaining regions during the week were relatively quiescent.
```

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at normal to moderate levels all week.

Geomagnetic field activity was quiet all week with the exception of two unsettled periods. The first was during the 00-03 synoptic period on 26 November most likely associated with a CME that erupted on 23 November. A weak interplanetary shock was observed at the ACE spacecraft at 26/0437 UTC followed by an 8nT sudden impulse at the Boulder magnetometer at 26/0514 UTC. Conditions quickly returned to quiet levels. The second unsettled period was early on 02 December associated with co-rotating interaction region.

Forecast of Solar and Geomagnetic Activity
03 December - 29 December 2012

Solar activity is expected to be at low levels with a chance of isolated M-class flares through the entire forecast period (03-29 December).

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal levels except during 14-21 December following the onset of a coronal hole high speed stream on 11 December and sustained by another stream which is expected to become geoeffective on 14 December.

Geomagnetic field activity is expected to be at quiet levels for the majority of the forecast period. Unsettled to potentially active levels are expected on 11-12, 14, and 29 December associated with recurrent high speed solar wind streams.

Hams provide emergency communications

Posted: 04 Dec 2012 02:03 AM PST
http://forums.qrz.com/showthread.php?370739-Hams-provide-emergency-communications&goto=newpost

Hams provide emergency communications

Typhoon Bopha (local name Pablo) has hit the Philippines uprooting trees, downing power lines, sparking landslides and making 40,000 people head for shelters.

It was the strongest of about 20 typhoons to affect the country this year with its heavy rain and wind gusting up to 210km/h as it came ashore at Mindanao.

The Philippine Amateur Radio Association (PARA) had its ham emergency radio operations (HERO) working when the typhoon struck the southern Philippines.

PARA is using all available means of communication like HF radio (7.095 MHz) VHF radio (144.740 MHz), the internet and social media (Facebook, email, echolink) to monitor the situation and give updates to all concerned.

Ham emergency radio operators have been assisting in the communication needs of these cities (as reported by DW5JMJ, DU5AOK and DU8BGA).

RADNET 5, a local club of amateur radio operators in Tacloban City, is very active in helping provide the city with vital communications link.

It is in constant coordination with the City Disaster Risk Reduction Management Council (CDRRMC). So far, 5,700 families have been evacuated from Saint Bernard.

RADNET 5 is also assisting the Red Cross in Tacloban and Saint Bernard. The City Government of Tacloban City has used the Tacloban Convention Centre as one of its evacuation centres.

The casualties have been minimal, due to preparations, the cooperation of evacuees and the mammoth response and recovery efforts.

JJim Linton VK3PC

Chair of the IARU Region 3, Disaster Communications Committee, with

Eddie Valdez DU1EV

Hornet ARC to conduct Remember Pearl Harbor Day event

Posted: 03 Dec 2012 09:32 PM PST
http://forums.qrz.com/showthread.php?370731-Hornet-ARC-to-conduct-Remember-Pearl-Harbor-Day-event&goto=newpost

On Friday, 12/7/2012, station NB6GC in the USS Hornet Aircraft Carrier Museum will be on the air for contacts to remember the attack on Pearl Harbor, HI, on December 7, 1941. USS Hornet (CVS-12) is a WWII Aircraft Carrier launched in 1942 but our namesake was USS Hornet (CV-8) which was in the Pacific near Hawaii on Dec. 7, 1941. NB6GC operates from a compartment just below the flight deck of CVS-12 and uses several of the ship's original transmitting antennas.

Operations will use SSB and PSK-31 on the HF bands from 1100 PST to 1700 PST. Frequencies (MHZ) will be 7.212, 14.312, 21.312, and 28.312.

RAYNET During Floods and Chill:

Posted: 04 Dec 2012 12:07 AM PST
http://www.eham.net/articles/29452

With temperatures expected to fall below freezing in many parts of the United Kingdom, it brings even more worry to residents in the flooded areas. As recent rain travels through the river systems, taxing bridges and other infrastructure, ice and freezing fog are now the additional hazards. Four people have died since the wet weather struck last week and around 900 people in England and Wales have fled their waterlogged homes. Earlier, the Mid Severn RAYNET (Radio Amateurs' Emergency Network) group members were asked to assist by the Worcestershire County Council County Volunteers Emergency Committee on Sunday November 25th, as a very short notice response for volunteers needed for flood preparation. Due to the then rising waters of the River Severn, the Emergency Planning Officers were concerned about the potential for flooding of adjacent residential properties in parts of Worcester city centre, some which had been constructed after the floods of 2007.

NEW HF OPERATORS - THINGS TO DO

You don't have to be a General or higher to take advantage of HF
contesting fun this weekend as the ARRL 10 Meter Contest lights up the
band. Technicians (and the few remaining Novices) can participate right
```

in the thick of the action. The following weekend is the CW edition of the ARRL Rookie Roundup - pound a little brass and raise your code speed another few notches.

BULLETINS

CQ WW logs were due five days after the contest - earlier than reported in the previous issue!

BUSTED QSOS

Brad AA1IP notes that gentleman who achieved trans-Atlantic DX with a QRPP transmitter <http://aa1tj.blogspot.com/2012/06/vanguard-1-satellite-transmitter.html> was in this instance Michael Rainey, AA1IJ. Also, the video "I Want a Big Tower" was done by KT8K and Phil Gildersleeve's call was W1CJD, not W1ICD. I can't wait to see my log checking report for CQ WW CW.

CONTEST SUMMARY

Complete information <file:///C:/Users/Ward%20Silver/Documents/Editing%20and%20Articles/Contest%20Update/Contest%20Update%20121205.docx#Contests> for all contests follows the Conversation <file:///C:/Users/Ward%20Silver/Documents/Editing%20and%20Articles/Contest%20Update/Contest%20Update%20121205.docx#Conversation> section

December 8-9

- ARRL 10 Meter Contest
- SNS and NS Weekly Sprints--CW, Digital, (Dec 7)
- 28 MHz SWL Contest
- UBA Winter Contest
- AWA Bruce Kelly QSO Party--CW
- SKCC Weekend Sprintathon--CW
- Great Colorado Snowshoe Run--CW

December 15-16

- ARRL Rookie Roundup--CW
- NA High-Speed Meteor Scatter Contest--Digital (Dec 11)
- NAQCC Monthly QRP Sprint--CW (Dec 12)
- CWops Monthly Mini-CWT Test (Dec 12)
- Russian 160 Meter Contest (Dec 14)
- Feld-Hell Happy Birthday Sprint
- OK DX RTTY Contest
- Croatian CW Contest
- Holiday Spirits Homebrew Sprint--CW
- Run For the Bacon--CW (Dec 17)

==> NEWS, PRESS RELEASES, AND GENERAL INTEREST

The VooDoo Contest Group is hanging it up following this year's last spell of operation from EL2A. As Ned AA7A reported, "After 18 years of wandering around in West Africa, the famed VooDoo Contest Group's hardware has been disassembled, parted out and distributed among returning operators, local EL operators and club stations or pounded into raw metal. The VooDoo Contest Group spirit survives and we may mount another operation next year from somewhere, but it will not be in West Africa in proximity to EL and the tired pile of VooDoo hardware." As a long-time fan of the VooDudes, I can only tip my hat in admiration and offer "Well done!" on behalf of the many Contest Update readers who logged many a welcome multiplier from their efforts.

The 2013 Southeastern VHF Society Conference will be held on April 19 and 20, 2013 in Cocoa Beach, Florida. Sponsored by the Florida Weak Signal Society <http://www.svhfs.org/>, there will be a full slate of events including a banquet, tours, antenna and noise figure testing, along with a flea market. There will be vendor displays and technical presentations both days. (Thanks, AMSAT <http://www.amsat.org/> Bulletin ANS-337)

Now is the time to get prepared for the new categories in ARRL VHF+ contests discussed in the previous issue: FM-Only and 3-Band. Aimed at entry-level VHF+ contesters, take the opportunity to publicize these categories in your local club newsletters, meetings, and online discussions. Folks new to contesting probably won't have contest logging software so you can help them learn about that, too! This is certainly a "teachable moment" so start early - don't miss the opportunity.

It's a good idea to perform a test transmission of your CW messages before the contest gets going - I heard one station sending "CQ SS" at the beginning of the WW CW contest. Maybe "SS" is a cut form of "WW" but I doubt it - I can't say that I've not made similar mistakes though!

Jim K1TN confirms that radio-sport.net has ceased online publication, noting that a final wrapup <http://www.radio-sport.net/radio-sport-net-qrt.htm> by Jamie NS3T has been posted on the site in the past couple of days.

The Potomac Valley Radio Club newsletter <http://pvrc.org/Newsletters/dec12.pdf> for December contains lots of photos of member shacks - some little, some mighty, some SO2R (Single-op, Two Radios). A "virtual open house" is a great idea for your club newsletter, too!

The PhoneSat Cubesat is planned for launch aboard a new commercial rocket from Orbital Sciences Corp around December 17. Phonesat carries an amateur radio payload on 437.425 MHz and has been chosen as one of the winners in the Aerospace category for the Popular Science magazine "Best of What's New 2012 <http://tinyurl.com/PhoneSatNews>" awards. The satellite is built around the Nexus smartphone and will use its 5MP camera for Earth observation, and 3-axis accelerometer and 3-axis

magnetometer for attitude determination. Hey, how's the coverage up there? (Thanks, AMSAT <http://amsat.org/> Bulletin ANS-330)

This is the time of year when many clubs have elections. If you or your club is looking for guidance as to how to run an election, Robert's Rules of Order for Elections <http://westsidetoastmasters.com/resources/roberts_rules/chap12.html> is available online. Robert's Rules can seem a little formal but they do help a group conduct business in an orderly manner.

"Gee whiz," says the 3830 data master aggregator Dink, N7WA, "Less than 24 hours (after CQ WW CW - Ed.) and already more than 480K of soapbox comments <http://www.eskimo.com/~mwdink/3830/>!"

Web Site of the Week - From the latest West Mountain Radio <http://www.westmountainradio.com/> newsletter comes word Joe K1JT has released a new version of WSJT called WSJTX <http://physics.princeton.edu/pulsar/K1JT/wsjt.html> that includes a new mode called JT9 primarily designed for LF/MF. It is similar to JT65 but with a much reduced bandwidth. The mode is being used on the 30 meter band at 10.130 USB.

WORD TO THE WISE

Comfort - In the ergonomics department, Kirk K4RO reports that the best new accessory in his station during CQ WW CW was a big exercise ball. Using it as a chair at times stretched muscles and provided "huge relief to lower back and legs." Your editor also enjoyed the results of a new dual-firmness chair pad from Relaxobak <http://www.relaxobak.com/>, recommended by Rick K6VVA.

The photo at right shows how Bud W2RU operates standing up with a small stool providing the necessary "lift" to his keyboard. After relating the suggestion of compression socks, I heard from fellow Contest Update reader and contester, Steve N8WL whose Activskin <http://www.activskin.com/> product line includes full-support hosiery designed for comfort while being worn for long periods. Attention to comfort keeps the operator healthy, happy, and most importantly - on the air and making points!

==> SIGHTS AND SOUNDS

Last month, W8NN and K8UT delivered a presentation to the SouthEast Michigan DX Association (SEMDXA) titled "Using the RBN as an Antenna Performance Tool <http://www.k8ut.com/tiki-list_file_gallery.php?galleryId=2>." Among the topics is a description of the testing protocol, which the testers found required strict compliance to permit valid comparison of antenna A to antenna B to antenna C. (Thanks, Larry K8UT)

Rick ZL2HAM just released a very nice short video <http://www.youtube.com/watch?v=n4K2KvlDJ5I> showing propagation during the CQ WW CW between ZL and the rest of the world. Reception is

displayed on an az-el map as reported by the Reverse Beacon Network (RBN). This clearly shows how propagation changes with the Sun's position, gray line, and other factors. (Thanks, Tom K1KI)

The Van Allen Probes Mission, part of NASA's Living With a Star program, studies the physical dynamics of Earth's radiation belts and space weather. A video of this mission, including classroom activities about space weather has been released by the Johns Hopkins University Applied Physics Laboratory. (Thanks, AMSAT <http://amsat.org/> Bulletin ANS-330 and Bill, W3XO)

Fred K3ZO sent along a link to this video <http://www.youtube.com/watch?v=Mpylc8EjKaU> taken during the SEANET convention, illustrating what a great institution ham radio is in furthering international understanding and brotherhood. You might even understand why someone would pass up a major contest in order to attend.

Just at the end of the CQ WW CW contest, your editor was watching the logging software's Gray Line window. At 0000Z as the Sun hit the western boundary of the map, a quirk of the program turned the whole map to night for one minute. How appropriate!

==> RESULTS AND RECORDS

Raw scores for CQWW CW 2012 are now available. These scores were calculated by the log checking software before any cross checking is performed. Final scores will show changes between 2-20% depending on the accuracy of the operator. Please check that your entry is in the correct category and report <questions@cqww.com> any errors or questions. (Thanks, CQ WW DX Contest Director Randy K5ZD)

The good news is that last year's ARRL 10 Meter Contest attracted a record number of participants and there are snazzy new certificates, too. The bad news is that load will make the certificates be a little late this year - the ARRL Contest Branch is working hard, though, and will have them in the mail soon. (Thanks, ARRL Contest Branch Manager, Sean KX9X)

Results of the 2012 Texas QSO Party are now available on the TQP website <http://www.txqp.net/>. Plaques for the winners are anticipated to be mailed starting in January. A special thanks is extended to the Texas stations who combined to activate 250 of the 254 counties! (Thanks, Chuck NO5W and Keith NM5G, TQP Coordinators)

Raw scores have been published for this year's WAE DX RTTY <http://www.darc.de/referate/dx/contest/waedc/resultate/rtty/> contest held in November. (Thanks, Mike WU9D)

Tack JE1CKA reports that the Japan International DX Contest committee has uploaded the JIDX 2012 CW results. <http://jidx.org/2012cw.html> JIDX Phone logs are still being accepted - check the Logs Received list <http://jidx.org/2012ph-cate.html> to be sure yours has been accepted.

>From Doug K1DG, "I *think* these are still the highest country totals worked during a contest on one band. On SSB: K3LR 192 (20 meters) and PJ4B 190 (15 meters) both in the 1999 contest." If anybody else has documented higher totals, please let the editor know about it!

OPERATING TIP

Don't confuse other participants by transmitting information in an unexpected order or at an unexpected point during the contact. For example, send your Sweepstakes information in the same order described by the rules: number, precedence, call sign, check, and section. Remember that "thanks" is most often used to conclude a contact and is usually interpreted as "QRZ?" Sent too early, TU cues callers to begin calling while you are still in the middle of a contact - this gets the whole pileup out of sync and slows everything down. To maintain rhythm and rate, don't confuse your customers!

==> TECHNICAL TOPICS AND INFORMATION

C-shaped screw-in electric fence insulators
<http://www.amazon.com/Fi-Shock-SC-275-Black-Insulator-25-Per/dp/B000IK0ML4/ref=sr_1_2?ie=UTF8&qid=1353632067&sr=8-2&keywords=electric+fence+insulator>
make neat and cheap insulator for Beverage antennas. The ends of the C overlap so the wire can be slipped into the insulator then held with a 90-degree rotation of the screw. The wire is then free to slide in the insulator. Most any farm or horse supply store should have them. (Thanks, Grant KZ1W)

Arne N7KA recommends this explanatory website
<http://www.thomasnet.com/articles/machinery-tools-supplies/bearing-types>
for clearing up the mystery of bearing types.

A downloadable collection of RF calculations
<https://sites.google.com/site/g0ftdradio/home/rf-spreadsheets> made by Andy G0FTD has been made available in a spreadsheet. (Thanks, AMSAT <http://amsat.org/> Bulletin ANS-330)

For up to the minute propagation information, Thomas NZ4O has created his MF/HF/6M Radio Wave Propagation Subscription Service <http://www.solarcycle24.org/>. The $30.00 per year subscription is for daily MF/HF/6M radio wave propagation forecasts similarly to the emailed DX bulletins.

For Yagi designers, a trio of programs are available to help you with the mechanical design of the elements for survivability under wind and ice loading. YagiStress <http://k7nv.com/yagistress/> by Kurt K7NV is perhaps the best-known of the three. Bob K0RC has converted the W6QHS (now W6NL) Lotus element taper spreadsheet to Excel 2003 XLS format <http://tinyurl.com/d7m3pxn>. The spreadsheet has some new worksheets from the original and Bob's Revision 3 of an SWR charting tool is also available. Steve W3AHL recommends the $39 DX Engineering design tool, Yagi Mechanical <http://www.dxengineering.com/parts/dxe-sof-yagimech>. Once an antenna has been designed with a constant element diameter using EZNEC <http://www.eznec.com/> or similar modeling tools, these

mechanical design tools can be used to change the element taper schedule to achieve the required mechanical properties while keeping the element resonant at the right frequency.

To prevent vibration from loosening the bolts holding a rotator to the tower mounting plate, Jim K0XU first installs a stud, held with Loctite thread locking compound <http://useloctite.com/threadsealing.html?gclid=CMzNxbCBgbQCFQRnOgodViYAXA> and a jam nut. The protruding studs also make it easier to align the rotator with the holes in the rotator plate. A jam nut is also added to the nut below the plate. Even if the nuts come off, the rotator still can't move.

Technical Web Site of the Week - The December issue of the Packrat VHF "Cheese Bits <http://www.packratvhf.com/Cheese%20Bits/cheesebits.html>" newsletter contained a detailed article about the use of multiple band scopes for VHF+ contesting. "What's All This Multiple Bandscope Stuff, Anyhow?" By Roger W3SZ is a good example of how to make good use of this new tool for contesters.

==> CONVERSATION

A Cooperative Venture

Big contests like CQ World Wide really test our ability to coexist in our limited amount of spectrum. As I've observed before in this column, radiosport is one of the rare competitions requiring the contestants to cooperate with each to score points. No cooperation, no points. The increased activity of late requires particularly intense cooperation.

Of course, what constitutes effective and appropriate cooperation differs between competitors. There are a wide range of strategies varying from casual search-and-pounce to all-out 48-hour scouring of the bands for contacts. As a result, there are no one-size-fits-all "best" practices. Nevertheless, there are basic requirements everyone must satisfy: call signs and the exchange information must be transmitted and received so that both stations can submit a log containing the correct information.

That's an odd way of describing the requirement: ...so that both stations can submit a log containing the correct information. Note that I didn't say, must be transmitted and received correctly. What's the difference? The second, more conventional statement implies the information has been exchanged in real-time. The first only requires that the information be recorded correctly in a log and that is all that the sponsors examine; the log.

Also unlike most other sports, radiosport scoring is based on the contents of a written record after the competition is finished. As such, it really doesn't matter how the information makes its way from one station to the other as long as the methods comply with the requirements of one's entry category. That makes it possible to not even transmit some aspect of the information, such as call signs, if

one assumes that it is known either from previous contacts or over some other channel, such as spotting networks.

The debate about sending one's call has been going on for at least thirty years. The top-scoring, most experienced operators endorse the technique of not sending their calls during every contact as one method (among many) of controlling pileup size. (Note that I am referring here to DX stations and not getting into issues of satisfying FCC rules about identification.) As long as the pileup inhabitants don't have to wait "too long" (whatever that means) and the DX station is good at pulling complete calls out of the pile and behaving consistently from contact to contact, rate for both the caller and callee are maximized.

It is easy for this to break down, of course. The most common reason for chaos is poor cooperation by the callers, such as not listening and calling out of turn or getting out of sync. The bigger the pileup, the more likely these will occur, leading to a large mess best described as a "snarl" or "swarm". If you've ever been on the DX end of a big pileup, you know how hard it can be to maintain rate when the callers won't use good calling technique. Another cause for pileups to break down in disorder is when the DX station behaves erratically; such as changing the response from contact to contact or not being able to pull out full calls with lots of back-and-forth to confirm information, to name just a couple of reasons. It is much, much easier for a station in the pileup to maintain discipline if the station running the pileup is consistent and gives clear signals as to what to do.

So there is a bargain to be made: The callers are expected to listen, not call out of turn, and give their full calls while the DX station is expected to establish a consistent and effective pattern of operating to which the callers respond. Part of that effectiveness is identifying one's call. Too many stations were heard during the CQ WW CW contest not giving their call signs for excessive periods - minutes at a time in some cases. This violates the bargain that underlies cooperation, especially from the perspective of the callers who are giving up extra time for no additional benefit to them.

Is it the assumption that callers are getting the correct call sign from the spotting networks? Consider that from the final CQ WW Claimed Scores <http://www.cqww.com/claimed.htm?mode=cw>, there were 2604 Single-Op, All Band logs (all three power categories) and 1735 Single-Op, Assisted logs. Assuming that single-band logs were submitted in about the same ratio, 60 percent of the callers were not connected to the spotting networks. Thus, if a station is not sending a call, more than half of the stations available to the pileup have no idea who the station is! They have to either sit there and wait for a call sign to be sent - which costs them QSOs - or they have to tune away from that pileup and come back later which is a risk that they will miss out on a contact.

It also means a lot of them are guessing the call - so they are either making a duplicate contact or putting the wrong call in their logs. Not

just logging a busted call for which they would get the penalty but probably logging the call of a different active station they think they are calling which causes the DX station to get a NIL (not in log) penalty, as well! This is not a good tradeoff and a good reason to limit the practice of sending call signs infrequently.

Note that I am not opposed to giving your call "every few QSOs" as a matter of practice or kicking it into high gear and working a half-dozen stations in a quick burst without giving your call. This is a long-established and successful method of controlling pileup size and keeping the rate up for everybody. What I am opposed to is a station going ten or twenty QSOs (or more) on a regular basis before identifying. It wastes the time of the callers and leads to unnecessary log checking penalties. It is bad practice and poor cooperation.

Should there be a rule requiring sending a call every X contacts? Well no, but I think there should be clearly-expressed expectation that stations running pileups should avoid long periods of not giving their call signs. A rule is too inflexible and who is going to enforce it, realistically? I am as frustrated as anybody else but I eventually must agree that we can't fix this particular problem through more rules. It can be addressed through education and by pointing out good technique. For example, in the CQ WW CW PJ2T, ED9Z, PJ4A, PJ4D, CW5W, EL2A, YN2CC, NH2T, HK1NA, 8P5A, LT1F, ZD8W, and the big KH6 and 7 stations - among others - all made lots and lots of QSOs while signing quite frequently. Not every time and I am not saying they were all on best behavior from beginning to end...but certainly enough to keep order and not raise blood pressures around the world unnecessarily. Good job - thank you!

Scores and participation have been increasing over the past years. Pileups are getting really, really big. The contests and the band openings aren't getting any longer. This puts more pressure on us to behave well during the contest. We need to focus on cooperating with each other - on both ends of the pileup. Callers and callees both need to maintain a disciplined approach to pileups that does not disproportionately require either group to waste time, forego contacts, or risk higher log checking penalties. It's called cooperation and we all benefit from it.

73, Ward N0AX

==> CONTESTS

5 December through 18 December 2012

An expanded, downloadable version of QST's Contest Corral in PDF format <http://www.arrl.org/contest-calendar> is available. Check the sponsor's Web site for information on operating time restrictions and other instructions.

HF CONTESTS

ARRL 10 Meter Contest--Phone,CW, from Dec 8, 0000Z to Dec 9, 2400Z. Bands (MHz): 28. Exchange: RS(T) and State/Prov or serial. Logs due: Jan 9. Rules <http://www.arrl.org/contests>

ARRL Rookie Roundup--CW, from Dec 16, 1800Z to Dec 16, 2359Z. Bands (MHz): 3.5-28. Exchange: Both calls, name, check, S/P/XE or "DX". Logs due: See web. Rules <http://www.arrl.org/contests>

SNS and NS Weekly Sprints--CW,Digital from Dec 7, 0200Z to Dec 7, 0300Z. Bands (MHz): 1.8-14. Weekly on Thursday evenings local time. Exchange: Serial, name, and S/P/C. Logs due: 2 days. Rules <http://www.ncccsprint.com/rules.html>

28 MHz SWL Contest--Phone,CW, from Dec 8, 0000Z to Dec 9, 2400Z. Bands (MHz): 28. Exchange: Log ARRL 10 Meter Contest QSOs. Logs due: Jan 31. Rules <http://swl.veron.nl/swlcontest.htm>

UBA Winter Contest--Phone,CW,Digital, from Dec 8, 1700Z to Dec 9, 2100Z. Multiple operating periods. Bands (MHz): 1.8-7. Exchange: RS(T) and UBA section or serial. Logs due: 3 weeks. Rules <http://www.uba.be/en/hf/contest-rules>

AWA Bruce Kelly QSO Party--CW, from Dec 8, 2300Z to Dec 9, 2300Z. Multiple operating periods. Bands (MHz): 3.5,7. Exchange: RST, Xmtr type, power, name. Logs due: 30 days. Rules <http://www.antiquewireless.org/>

Costa Mesa Pupils to Talk to Astronaut on Space Station:

Posted: 05 Dec 2012 01:15 AM PST
http://www.eham.net/articles/29457

COSTA MESA -- Students at Kline School have been invited to talk to Cmdr. Kevin Ford aboard the International Space Station on Thursday through a NASA education event. The event, ARISS, is a cooperative venture of NASA, the American Radio Relay League, the Radio Amateur Satellite Corporation and other amateur radio groups and space agencies. "The 'telebridge' communication with the space station is being done as the ship flies over Italy and a ham radio operator relays a two-way communication through the telephone," said Sean Butler, technology coordinator and science teacher at Kline School. "There are three crew members currently living on the ISS," he said. Susan Kline, founder and director of the school, said the school has four cameras set up for video capture, and one for live streaming. This communication echoes a similar contact Kline School had on July 15 and July 19, 1994, when space enthusiasts were celebrating the 25th anniversary of the Apollo 11 moon landing. This ARISS contact commemorates the 40th anniversary of the launch of the last lunar landing - Apollo 17 - on Dec. 7, 1972. In addition to a question-and-answer period with students and the space station crew member, Kline graduates were invited to share how the 1994 radio communication impacted their lives.

//
Ham Radio Operators Connect with People All Over -- Even in Space:

Posted: 05 Dec 2012 01:13 AM PST
http://www.eham.net/articles/29456

Guests at last month's Juneau County Historical Society open house found themselves connected to the wider world thanks to two amateur radio operators from Mauston. Howard Fischer and Lloyd Vodvarka set up their equipment in the Boorman House's second-floor ballroom during the Nov. 25 event and conversed through Morse code with people far from Wisconsin. The station was set up for other operators to call the operators in Mauston. "People called in on our 'Special Events Boorman House Christmas Program,'" Fischer said. "We had a lot of calls from Arizona, Florida, Kansas, Georgia, Rice Lake, Cleveland, Minnesota and Alberta, Canada," he said A crowd of children clustered around their table as Fischer transmitted and received voice communication through a headset while Vodvarka signaled and tapped replies in Morse code using a telegraph key.

Guests also were able to examine antique equipment, which Fischer called "vintage stuff" and compared with the modern-day headphones. Amateur radio operators, also called ham radio operators, use radio equipment in two-way communicators with other operators. They use specific radio frequencies assigned for ham radio and have call signs -- W9JCJ and KC9LLI are examples -- as identification.

'Hello? What's Your Call Sign? It's Marshall Calling':

Posted: 05 Dec 2012 01:10 AM PST
http://www.eham.net/articles/29455

Redstone Arsenal's Ham Shack is the place to be if you want to talk to lots of different people. But this Ham Shack isn't a socialite's favorite lunch spot or a party lover's nighttime hangout. Rather, it's the place to be if you are into the serious business of amateur "ham" radio. Located in a nondescript cement building surrounded by antennas and isolated from other Arsenal activities just southwest of the Martin Road/Rideout Road intersection, the Ham Shack refers to the Michael Kalange Memorial Station, amateur radio call sign WA4NZD. It is the headquarters of the Marshall Amateur Radio Club.bAlso known as building 4622, the Ham Shack is where technical types from throughout the Arsenal gather on a regular basis to communicate with other amateur radio enthusiasts around the world, experiment with the latest technology in amateur radio, participate in national and worldwide amateur radio contests, and test and maintain their capabilities in case they are called on to provide emergency communications for the Arsenal.

VI4ASJ

ACMA finds stolen emergency beacon

What use is an f-call

THESE STORIES AND MORE IN THIS EDITION OF NEWS FROM THE WIRELESS INSTITUTE
OF AUSTRALIA FOR WEEK COMMENCING DEC 9 2012.

ZL9HR

Following two days delay caused by 11 metre swells in the Great Southern
Ocean, the team arrived on Campbell Island on Saturday the 1st. of December
and were operational using minimum equipment by 05:00 UTC. The following day
the full range of masts and antennas were installed and stronger signals off
the island were heard worldwide.

Unfortunately the stay cannot be extended so the team will be leaving
Campbell Island on Sunday the 9th. of December as planned.

Thanks goes to the New Zealand Department of Conservation as they have now allowed the stations to operate for several hours after sunset where it was expected that all team members would have to return to the ship at sunset.

Logs are being uploaded daily via a satellite phone link but apart from this, communication to the team is very restricted as no cell phone coverage or Internet access is available from the Island. Current log status can be checked to see your contact has been recorded within 24 hours by checking the ZL9HR.COM website. This website also lists the call signs of the various Pilots around the world. Please check their QRZ.COM listings to get their email addresses if you need to contact them.

(Ed VK2JI - Publicity Officer ZL9HR)

Huge Telescope To Warn Of Solar Storms

An eye on the sky in Western Australia's remote outback (VK6) could potentially save the world billions of dollars by warning of cosmic catastrophe, astronomers say.

The Murchison Widefield Array radio telescope just unveiled will give a dramatically improved view of the sun and provide early warning of explosive solar storms that can damage to communication satellites, electric power grids and GPS navigation systems, the International Centre for Radio Astronomy Research in Perth reported.

In addition to its solar observations, the M.W.A. will offer scientists an unprecedented view of the entire history of the Universe, including how the very first stars and galaxies formed.

(press statement)

HOWZAT

FOX Sports will take cricket broadcasting in VK to a new level this summer with a world first - a micro camera in helmets worn by batsmen and wicketkeepers.

The technology is to be officially introduced in the Big Bash Twenty20 tournament.

The equipment consists of an HD visor-mounted camera (1080i) and transmitter with batteries on the rear strap.

The additional weight on the helmet is 250 grams, about the weight of a bar of soap, and can be fitted to any player's helmet during the game.

Fox Sports believes it will be the first camera attached to a player during a cricket match at this level. Last year, the pay-tv network pioneered the use of cameras on umpires.

Adelaide yes and Qantas no, to Wi-Fi

The first Australian capital with free Wi-Fi outdoors will be Adelaide.

The South Australian Government and Adelaide City Council will foot $1.5 million bill to provide it at all public areas, by the end of 2013.

Already a trial of free Wi-Fi is on all Adelaide Metro trams and 20 buses.

Similar public Wi-Fi initiatives are in Prague, Singapore, Chattanooga, Wellington, Auckland, and Luxembourg.

However, our national airline Qantas has dumped internet connectivity on its Airbus A380 superjumbo to Los Angeles and London.

When it started to charge for access, the average take up was less than 5 per cent of passengers, and Qantas felt this did not justify the cost of the technology.

(Jim Linton VK3PC)

ACMA finds stolen emergency beacon

The Australian Search and Rescue was recently alerted that an activated emergency position-indicating radio beacon, or EPIRB had been stolen from South Melbourne.

After narrowing down its initial search, they called in the expertise of a field inspector from the Australian Communications Authority.

Using a Yagi directional antenna, he eventually found the errant device hanging from overhead power lines. It was safely retrieved for evidence by members of the Victoria Police.

EPIRBs, linked to satellites when turned on, are used by those who go to sea and venture into remote areas.

(Jim Linton VK3PC)

AJ 2013

On the Fraser Coast of Queensland, the showgrounds at the regional and historic city of Maryborough are currently closed. In the town that gave birth to the creator of "Mary Poppins" and played a large part in the building of the railways, including the first Queensland high speed train, the Tilt Train, goods and services are being put in place for the triennial Australian Scouts Jamboree, AJ2013.

11,000 scouts, their leaders and limited support workers will enjoy a range of activities whilst living under canvass. Amongst the amateur radio fraternity and scouts with amateur radio qualifications, the interest level is rising with offers of support coming from far afield interstate. Latest to offer is the Fisher's Ghost Amateur Radio Club who wish to provide amateur radio access to scouts from VK2 area who are not attending the Jamboree.

You will remember that Fishers Ghost AR Club hosted the amateur radio activity at the last Australian Jamboree. Their experiences were publicised in Amateur Radio magazine. On behalf of the members of the Maryborough Electronics and Radio Group, I say "Welcome aboard".

As this item is being prepared, the donated HF Radio from Icom Australia is making its way north from Melbourne.

Of course things always take a few turns and we heard of the storm damage to Albert, VK4POW's antenna and now our local ATV guru looks like he may be kept from the Jamboree because of work commitments.

To the several interstate amateurs who are attending AJ2013 and who have contacted MERG, we thank you and we hope that our combined efforts will bring success for VI4ASJ.

Reporting for WIA National News, I'm Geoff Emery, VK4ZPP on behalf of MERG, Inc.

HAMS ACROSS AUSTRALIA.

VK2

A couple of items this week attributed to SouthGate News in the UK relate to VK activity.. Mmmn are the VK's shy about telling their Aussie Mates, slipping it into OS pubs? HiHi

Even though the WIA News seldom get's to hear about our own WIA activity seems it's kosher to file stories on Southgate even about our own AGM rather then send it to ourselves!! Graeme Wilks G8DVJ who is Chairman of Southgate is to be conratulated and at least we manage to find some things out eventually courtesy of SG!

Another story was on on how a University will be involved with the Wyong Field Day, later with Felix that one, and this an Aussie Ham's spacecraft mission.

The Inner West Courier reports that Robert VK2URB is hoping to break new ground with two space missions he is part of.

The Sydney newspaper says VK2URB is involved in the communications system for the Team Stellar lunar mission scheduled for 2014, as part of an entry in the Google Lunar X Prize.

In addition he is working on a UK-based Mars mission, scheduled for 2020, that aims to sniff out biological methane.

Well done Robert!

http://inner-west-courier.whereilive.com.au/news/story/from-sydney-telecommunications-to-navigating-mars-mission/

And thanks to G4

VK3
web service:- http://www.amateurradio.com.au/news/

Mark VK3PDG is on the ball!

Already he has announced NEXT YEAR'S Southern Peninsula Amateur Radio Club (SPARC) Rosebud RadioFest 2013'S date as November 24.

A with last week's event, Rosebud RadioFest returns to the Good Old Days of Ham Radio Fests.

Forums, displays, new/pre-loved gear, great prizes & more.

Enquire on 0407844063

John Ross VK3BJR President of SPARC has sent thanks to the sellers who booked tables and successfully sold all manner of gear inside the large auditorium.

Secondly, he thanks the many interested people who attended the event from various parts of Victoria. The crowd exceeded the Club's expectations.

The level of support provided by forum presenters and "Show and Tell" exhibitors also contributed to the success of the event and the excellent catering provided by the Parents and Friends of the school was a great attraction. And lastly the excellent job done by the members of SPARC in planning, setting up and running the RadioFest which drew accolades from most who attended.

Again Rosebud RadioFest 2013'S date is November 24.

TARC Xmas Lights Tour

Get out your Santa Hats, flashy pins and glad rags and get ready for a magical mystery tour of the light fantastic !

The famous TARC Xmas Lights Tour is on again, happening Friday evening December 21.

It's a Drive Yourself Dazzling Spectacular and all mobile shack chariots will need to monitor 146.5MHz during the tour to hear instructions from the guide vehicle.

Embarkation point will be outside the VK4FR DX Complex Rangewood, 7-30pm.

Tour Event Host Gavin would especially like to know if you know of any HAMS putting on a light spectacular so their QTH can be included in the tour.

VK5

Andrew McMichael VK5FMAC has posted on the WIA Bully Board details of WICEN SA's SES SOCU Training & XMas breakup on the 13th.

Tjis will take the form of SAGRN generator deployment training & XMas breakup with SES SOCU.

Full Details :

Please see http://www.sa.wicen.org.au/calendar/calendar.php

DISCUSSION POINT

What use is an f-call?

A little while ago I made a commitment to myself to achieve the DXCC.

Since then I've received a few questions asking what it's all about.

It's an award for the DX Century Club, or said in another way, it's a recognition of making long distance contact with one hundred countries.

This achievement award has a long history. The DXCC was first awarded in 1937. Before then, in 1932 discussions started on how to determine what constitutes a country. For example, are Tasmania and Australia separate or together, what about Scotland and England, or Alaska and the United States. Suffice to say that a definition was arrived at after much discussion and you can read up on it on the ARRL web-site.

In case you're wondering, things change all the time. In 1935 Tasmania and Australia were separate because of geographical division, Scotland and England are two countries and Alaska and the USA are separate also because of geographical division. Most of that is the same today, except that Tasmania is no longer on its own. Countries come and go, Czechoslovakia, Dutch New Guinea and Sumatra have all been deleted over the years, South Sudan with a Z8 prefix is new as of July 14, 2011.

As I started looking into this further, it transpires that there are many versions of the DXCC, specific bands, modes and combinations of both. 2012 represents the Diamond Anniversary of the DXCC and there is a special award for that as well.

I've found that there is a QRP or low power version of the DXCC which fits in nicely with my Foundation License and my own views on the level of power needed to get the job done. So, QRP Portable DXCC is what I'm shooting for.

Now all I need is some spare time to actually turn my radio on.

I still need to learn more about the QSL process, set-up a logging system, get a plan together for finding the best way to get contacts in different areas, learn more about propagation, learn CW and make sure that my home life doesn't suffer while I'm doing this.

As I said the first time around, I don't know if I am going to take a month, a year or a decade to do this, but it's a really nice way for me to focus my attention on a particular aim and has the added benefit of making me an active operator, which ultimately is what this is all about, actually turning on the radio and using it.

How have you gone about developing your skills and motivating yourself?

I'm Onno VK6FLAB

Titanic radio signal man inspires new stage show

UK's Western Mail reports that the man who picked up the distress signal from the Titanic over his amateur radio from his garden shed in Pontllanfraith has inspired a new stage drama.

Whispers On The Waves is being staged by Odyssey, the inclusive community drama group from Cardiff-based Hijinx Theatre.

Read the story at
http://www.walesonline.co.uk/showbiz-and-lifestyle/showbiz/2012/12/01/titanic-radio-signal-man-inspires-new-stage-show-91466-32341264/

DANGERS ASSOCIATED WITH REPAIRING YOUR OWN RADIO

A Peoria man was robbed at gunpoint while fixing his radio, police say.

Officers responded last Friday and there, they spoke to the 35 year-old victim and a witness.

The second person said that the victim came to his house after being robbed.

The victim said that he was fixing his car radio when he was approached by three males, one armed with a handgun.

NEWS FROM ARNEWSLINE USA

MEXICO ZETA DRUG GANG BLAMED FOR KIDNAPPING ENGINEERS

If you are an Information Technology or two-way radio technician and planning a trip to Mexico, you might not carry an H-T on a belt clip where it can be seen. This is because at least one drug gang seems to be kidnapping and enslaving those who know two-way radio to build and keep their private system going. Amateur Radio Newsline's Cheryl Lasek, K9BIK, takes a look at the situation south of the border:

According to a report from Mexican news site Animal Politico, at least three dozen engineers and technicians have been kidnapped in the past four years. And Felipe Gonzalez who is the head of Mexico's Senate Security Committee told Animal Politico that none of the engineers who disappeared have ever been found.

Mexican authorities blame the notorious drug running gang the Zeta's for the kidnappings. The Mexican military is trying to dismantle an extensive radio network built and operated by the drug cartel but to date authorities have not had much luck shutting it down. Not only is much of the equipment super-easy to replace, but the drug runners have apparently found some unwilling assistance by kidnapping and enslaving technicians to help build it. Among them is at least one IBM employee and several communications

technicians from a firm owned by Mexico's largest construction company.

Last year the Mexican military found and dismantled one such drug runners radio network spread across north-eastern Mexico that included 167 radio antennas sites. As recently as this past September, Mexican marines found a 295-foot-high transmission tower in Veracruz State.

The bottom line: It seems the drug gangs have discovered that two-way radio is a tool that they will not be without but the Mexican government is doing all it can to take these clandestine operations off the air.

For the Amateur Radio Newsline, I'm Cheryl Lasek, K9BIK, near Zion, Illinois.

One of the best stories in the English language that explains in depth the safety issue to engineers and technicians in Mexico is on the World Disaster Report website. Its on-line at tinyurl.com/enslaved-technicians.

INCREASING EFFICIENCY OF WIRELESS NETWORKS

Professors at the University of California, Riverside Bourns College of Engineering have apparently developed a way of doubling the efficiency of wireless networks. According to researchers Yingbo Hua and Ping Liang it appears the doubling of efficiency could be achieved by using full-duplex with "time-domain transmit beam forming." They say that the latter digitally creates a time-domain cancellation signal, couples it to the radio frequency front-end to allow the radio to hear much weaker incoming signals while transmitting strong outgoing signals at the same frequency and same time.

Wireless Design says scientists Hua and Liang see applications in cognitive radio. They say that this is a type of wireless communication in which a transceiver can detect which communication channels are in use and which are not, and move into vacant channels while avoiding occupied ones. You can read the Wireless Design Online article at tinyurl.com/highly-efficient-radio.

==========

RSGB's G4NJH

RAYNET called out for floods

Available members of Mid Severn RAYNET group were tasked by the Worcestershire County Council County Volunteers Emergency Committee, or CVEC, during the afternoon of Sunday 25th November.

This was very short notice for the volunteers. Due to the rising waters of the River Severn, the Emergency Planning

Officers were concerned at the potential for flooding of adjacent residential properties in parts of Worcester city centre, some of which had been constructed after the floods of 2007. Multi agency teams from CVEC were tasked with notifying homeowners of the threat, issuing warnings advice and leaflets, and reporting back to the Social Services details of residents who might be unable to self-help and evacuate, and those who could require rest centre assistance.

Tony, G8WOX, Paul, G6DQM and Max, M0VNG deployed with the teams. The teams completed the task into the early evening and stood down, with residents most appreciative of the efforts made to alert them.

New data mode for Chinese text

If you look at the data modes in use today you may notice that the vast majority can only be used to communicate using the English language alphabet. That presents a real problem for countries such as China where the language requires graphical characters.

This shortcoming is critical when using amateur radio to support emergency and disaster relief operations. To overcome this, the Chinese Radio Amateur Club has devised an ingenious new mode that uses a 16 by 16 dot matrix to send each character. Known as CP-16, the system uses sixteen 17Hz spaced tones that allow the transmitted characters to be displayed by any receiver that uses a waterfall display.

So, if you spot Chinese characters on your waterfall whilst tuning around, you're seeing CP-16 in action.

New name for Luxembourg national radio society

The national amateur radio society of Luxembourg, Reseau Luxembourgeois des Amateurs d'Ondes Courtes, has changed its name to Radioamateurs du Luxembourg.

The address and other details remain unchanged. Please update your records accordingly.

OPERATIONAL NEWS - DATELINE 2012

WW ARRL 10 m Contest December 8- 9

Wyong Field Day - Mini Contest University open for registrations for attendees

According to SouthGate News in the UK, our own VK Wyong Field Day Group are calling for registrations to attend a (free) Mini Contest University at the Wyong field day in February 2013.

SPECIAL EVENT STATIONS, DX and BEACON AND NET ADVICE

BC.DX. NET CELEBRATES ITS 24th ANNIVERSARY

The weekly 40 meter BC DX Net from South India has celebrated its 24th anniversary. This Net began operation on Sunday, November 27, 1988

The BCDX Net is now held on Sunday morning's at 03:00 UTC on 7.085 MHz Lower Sideband for the advantage of those who are keenly interested in Broadcast Band DXing. According to its operators, the unique thing about this net is that it's helped hams to become SWL DXers, and SWL's to get their amateur licenses.

The current net control station is VU3SIO

(Southgate)

SPECIAL EVENT STATION TM1TARA

On the air, keep an ear open for special event station TM1TARA to be on air between December 8th to the 10th. This to commemorate the scientific voyages of French polar vessel the Tara.

Tara Expeditions has been organizing missions aboard this research schooner for the past 9 years. The goal is to learn more about the impact of so called climate change on the planets ecosystems.

So far Tara has accomplished eight successful expeditions including voyages to Greenland, Antarctica, Patagonia, southern Georgia, and the Arctic.

For this special celebration operations will be conducted by F8DVD and F8IJV from Paris, France during the Tara exhibit. Look for them on 20 through 10 meters on SSB. A special colour QSL card will be printed and will be sent via the Bureau or direct.

QSL with a self-addressed envelope and 2 IRC's - if you can still get them -- to F8DVD.

VK5VF Adelaide 6m, 2m and 70 cm beacons back on air.

Just in time for the VHF DX season, the 6m, 2m, & 70cm beacons have been serviced and put back into operation at Mt Lofty near Adelaide in VK5.

As the VK5 Mt Lofty 6m beacon has been off air for some time, in restoring the operation of the beacon it has also had a frequency change in accordance with the WIA band plans. Part of the rebuild included referencing the 6m and 70cm beacon frequencies to the GPS.

The VK5VF beacon frequencies are,

The new 6m frequency is now 50.320 MHz

The 2m frequency is 144.450 MHz and

The 70cm frequency is 432.450 MHz

So those who are into VK VHF DX, these beacons are again available.

Copy of this information may be found in the text edition on www.wia.org.au

INTRUDER WATCH - ENFORCEMENT ZONE

Region III IARUMS Coordinator Peter Young VK3MV

VK IARUMS reflector email to subscribe intruders@wia.org.au

INTRUDER NETS
Friday 0730 UTC 7.065.5 with VK4CEU David.

Amateur exclusive frequencies where any non-amateur signal is definitely an intruder.

Amateur HF Spectrum world wide
7.050 to 7.100
14.000 to 14.250
14.250 to 14.350 No broadcasters
21.000 to 21.450
24.890 to 24.990
28.000 to 29.700

IARU Region 3 Monitoring System Newsletter

The IARU Region 3 Monitoring System notes an increase in the number of intrusions in the higher frequency bands, particular from Over The Horizon Radars on 15 meters.

In the newsletter Peter Young VK3MV reports:

"Some OTHR emissions into northern Australia are very strong and a report has been filed with the Australian Regulator, seeking information and their removal. With propagation on the improve there are more detection of intrusions on 10 meters from low power commercial like services.

Again this month, further reports of HF Man Pack emissions are being logged, but due to the random nature of these emissions a possible location source is difficult to determine. Further reports are requested to determine a location.

The Burmese broadcast station operating on 7110 kHz, is still operational and has been reported to the Australian Regulator.

ARRL SAYS MORSE CODE PLAYS ROLE IN NEW SPIELBERG MOVIE

Producer Steven Spielberg has used Amateur Radio or Morse code in three of his last four movies: Super 8 (2011), The Adventures of Tin Tin (2011) and Lincoln (2012). Members of the Morse Telegraph Club -- an association of retired railroad and commercial telegraphers,

historians, radio amateurs and others with an interest in the history and traditions of telegraphy and the telegraph industry -- played an integral part in the production of Lincoln.

"Nine of the 16 telegraph stations depicted in the War Department were fully operational," explained Morse Telegraph Club International President James Wade, WB8SIW. "These instruments could be operated in any combination through the use of a specialized computer program and custom-built terminal units for the process. When necessary, a hand key could be inserted in the individual telegraph loops so messages could be improvised."

WW SPECIAL INTEREST GROUPS --- FINAL FRONTIER

Voyager 1 probe leaving solar system reaches 'magnetic highway'

NASA's long-lived Voyager 1 spacecraft, which is heading out of the solar system, has reached a "magnetic highway" leading to interstellar space, scientists claim.

The probe, launched 35 years ago to study the outer planets, is now about 18 billion km from Earth. At that distance, it takes radio signals traveling at the speed of light 17 hours to reach Earth.

Voyager 1 will be the first manmade object to leave the solar system.

Scientists believe Voyager 1 is in an area where the magnetic field lines from the sun are connecting with magnetic field lines from interstellar space. The phenomenon is causing highly energetic particles from distant supernova explosions and other cosmic events to zoom inside the solar system, while less-energetic solar particles exit.

"It's like a highway, letting particles in and out," lead Voyager scientist Ed Stone told reporters in San Francisco.

Scientists don't know how long it will take for the probe to cross the so-called "magnetic highway," but they believe it is the last layer of a complex boundary between the region of space under the sun's influence and interstellar space.

The International Lighthouse and Lightship Weekend

The 100th registration for this event is in. It comes from the Deutscher Amateur Radio Club, Emden club station DL0EM at the Campen Lighthouse, on the North Coast of Germany.

Active since 1891 with Germanys most powerful lighthouse lamp, in the mouth of the Ems River, and with its lattice tower construction it stands 65 metres

or 213 feet tall.

Listen for club station DL0EM with a team of operators on the HF bands. The International Lighthouse and Lightship Weekend is an annual fun and friendly event sponsored by the Ayr Radio Group on the third full weekend of August.

The basic objective is to promote public awareness of the historic structures and their need for preservation, promotion of amateur radio and to foster international goodwill.

So far 22 countries have registered. If you would like to know more or register online for the next event on August the 17th and 18th visit the website illw.net

Disaster recovery helped by amateur radio

The radio amateur community was well prepared when a super typhoon unleashed its fury on the Philippines, uprooting trees, snapping power lines, sparking landslides, cancelling flights and ferries sending 40,000 people to shelters.

Claiming more than 200 human lives, it was the strongest of 16 typhoons in the country this year, as Pablo (internationally named Bopha) had heavy rain and wind gusts up to 210km/h.

The Philippine Amateur Radio Association (PARA) had emergency communications on 40 metres 7095 MHz and VHF as the typhoon made landfall on Tuesday at North Davao in Mindanao. It left a large footprint of damage before exiting the country.

PARA is disappointed that its emergency use of 7095 MHz was not honoured by other radio amateurs, who disturbed its operation by testing equipment on air, tuning up, sending digital signals and sometimes even trying to make contact as if it was a DX activity.

A standard text will clearly identify emergency nets in future, as a worldwide reminder is issued not to QRM emergencies or training exercises.

Remember the sooner you submit material the more the likelihood of it being
broadcast in the very next edition of WIA National News. Each item will only
be broadcast once, if you want a couple of mentions, please submit different
slants to keep your event 'fresh 'and always if the news room is to read your
item write in the 3rd person.

==========
WIANews - we've reported...YOU decide.

TWITTER http://twitter.com/VK1WIA

Societies and Club News Letter Editors can EXCHANGE a feed prior to
the actual broadcast date, e-mail nationalnews@wia.org.au

Call-backs follow the RF editions, but also for text readers you may
lodge a quick reply to let us know you read it, who knows, you might
even get a "cheerio call".

Thanks to our dedicated band of broadcast volunteers who utilize
their time and equipment in bringing you this weekly broadcast.

The purpose of "WIANews" is to rapidly provide news of interest to
active amateurs residing in Australia and the globe.

We strongly encourage membership in the Wireless Institute of Australia
and participation in the activities of local clubs.

Opinions expressed in "WIANews" are those of the writers who submit
material and do not necessarily reflect those of the rebroadcasters,
nor the National WIA, but are broadcast in the spirit in which they were
submitted.

Material may be reproduced in whole or in part, in any form, a credit to
WIANews wouldn't go astray...

Compiled by VK4BB on behalf of the National WIA.

Californian balloon lands in Morocco

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/bP-7PfnSJzk/californian_balloon_lands_in_morocco.htm?utm_source=feedburner&utm_medium=email

The K6RPT-12 144.390 MHz APRS balloon successfully crossed the Atllantic
and landed in Morocco on Wednesday morning

//
Disaster recovery helped by amateur radio

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/7XXW2ho83Lc/disaster_recovery_helped_by_amateur_radio.htm?utm_source=feedburner&utm_medium=email

The amateur radio community was prepared when a super typhoon unleashed its
fury on the Philippines, uprooting trees, snapping power lines, sparking
landslides, cancelling flights and ferries sending 40,000 people to
shelters. However, PARA is disappointed that its emergency use of 7095 MHz
was not honoured by other radio amateurs

//
Tony's 10 Metre Band Report

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/vmVqNVu3T3w/december_06.htm?utm_source=feedburner&utm_medium=email

A very poor week including Saturday, almost back to 2 year ago levels. But
then came Sunday! I left the contacts at 3 or more so that the contrast
between Sunday and the rest of the week is very apparent. 5T0SP
(Mauritania) and 7P8D (Lesotho) vied for top spot all week with 5T0SP
probably just edging it. Others were ZL9HR (Campbell Island), J79WTA
(Dominica-Is) and lots more

//
von Karman Institute lectures on CubeSat Technology and Applications

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/fgx-1_eMGp8/von_karman_institute_lectures.htm?utm_source=feedburner&utm_medium=email

CubeSat Technology and Applications lectures will be held at von Karman Institute (VKI) (Brussels, Belgium) on 29 Jan – 1 Feb 2013

//
Cuba to Spain on amateur radio satellite FO-29

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/vjW7SkTqd4Q/cuba_to_spain_on_amateur_radio_satellite_fo29.htm?utm_source=feedburner&utm_medium=email

Hector CO6CBF reports on his successful transatlantic contact between Cuba and Spain using the amateur radio satellite FO-29

//
171 days to go...

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/Wda3ArAr1HY/171_days_to_go.htm?utm_source=feedburner&utm_medium=email

With the 2013 WIA AGM and Conference just 171 days away, less than six months to go, as organising committee, we have much to share and planning ahead

//
The role of a DXpedition pilot for ZL9HR

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/Q3Yh6zh487Q/the_role_of_a_dxpedition_pilot_for_zl9hr.htm?utm_source=feedburner&utm_medium=email

This news release on ZL9HR is a little different to normal. It is the comments from one ZL9HR team member who is not on Campbell Island - Rich KY6R is one of the global pilots supporting the DXpedition

//
Lesotho operation

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/zAiyoitA1Ks/lesotho_operation.htm?utm_source=feedburner&utm_medium=email

Chris, ZS6RI will be active as 7P8RI from Lesotho beginning December 17th for 20 weeks - with a two week on and two week off rotation (similar to his 9J2RI activities)

//
ACMA finds stolen emergency beacon

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/v8wbc6SVvp0/acma_finds_stolen_emergency_beacon.htm?utm_source=feedburner&utm_medium=email

The Australian Search and Rescue was recently alerted that an activated emergency position-indicating radio beacon, or EPIRB had been stolen from South Melbourne

//
West Tyrone Amateur Radio Club facilitate another Foundation Course

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/4n1abwTmYtU/west_tyrone_amateur_radio_club_foundation_course.htm?utm_source=feedburner&utm_medium=email

Omagh-based WTARC have presented certificates/licence to the successful candidates who recently completed an amateur radio foundation course and Intermediate exam in December 2012

//
Newspaper reports Radio Hams Talk to Astronauts in Space

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/bXJurwX-wPU/radio_hams_talk_to_astronauts_in_space.htm?utm_source=feedburner&utm_medium=email

The Star Times report that amateur radio operators connect with people all over - even in space

//
Vadrum speaks Morse Code

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/wZMV0BHm9rE/vadrum_speaks_morse_code.htm?utm_source=feedburner&utm_medium=email

In this video Italian drummer Andrea Vadrucci (Vadrum) drums out the Morse code alphabet

//
German hams bound for Nukunonu Atoll

Posted:
http://feedproxy.google.com/~r/AmateurRadioNews/~3/AGMVxF24jZ8/nukunonu_atoll.htm?utm_source=feedburner&utm_medium=email

Amateur radio operators Hans DL6JGN and Guenter DL2AWG will be active as ZK3N from Nukunonu Atoll (OC-048) between April 23rd and May 8th (2013)

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

Editor: Johannes Amchewicz, DK8JB
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

6Y, JAMAICA, NA-097
Lester,6Y5/W8YCM, is QRV again in SSB on 17m-10m from Negril on
Jamaica (NA-097) until the beginning of next year. QSL via homecall.

EA8, CANARY ISLANDS, AF-004
EA8/DG1BH is working from Lanzarote (AF-004) from Dec 2-20. He is
running only 10 watts into a vertical mainly on 20m or on frequencies
+/- 058 kHz. QSL via homecall.

F, FRANCE
Rodrigue,F8DFO, and Jeremy,F4DVJ, will activate the special event
station TM2VD in CW, SSB and digital modes on 80m-10m on Dec 7-12 and
Jan 2-4. The station remembers Robert Delrue,F3VD, who passed away in
August and was a mentor for many HAMs. QSL via F8DFO.

The Louvre-Lens, a branch museum of the Musee du Louvre, will be
inaugurated on Dec 4 and opened to the public on Dec 12. The special
event station TM62LL is activated by the radio club in Hernes until
Dec 15. QSL via F8KHW.
See: http://harnesradioclubf8khw.free.fr and http://www.louvrelens.fr
---
JeanPaul,F8BJI, uses the special call TM101O in RTTY (up to 250 Baud),
Throb4 and Thor8 until Dec 15. QSL via F8BJI.

The special event station TM1TARA celebrates the French scientific
research vessel TARA from Dec 8-10. Francois,F8DVD, and Sebastien,F8IJV
are working in SSB on 10m-20m. See also QRZ.com. QSL via F8DVD.

G, ENGLAND, EU-005
Following ISWL clubstations will be active in December:
GX4BJC/A in Bude/Cornwall by Mike,M0SMJ (EU-005, WLOTA 1841)

MX1SWL/A in Hartford by Tom,G3RPV, (EU-005, WAB TL27, WLOTA 1841)
QSLs via G6XOU.

JA, JAPAN, AS-077
The special event station 8J6HAM will be QRV in all modes on all bands
from Kyushu (AS-077, WLOTA 0963) from the 12th West Japan Ham Fair
between Dec 10 and Mar 3. QSL via bureau.

LX, LUXEMBURG
The national amateur radio society of Luxembourg has changed its name
to Radioamateurs du Luxembourg. See also: http://www.rlx.lu

ON, BELGIUM
Berkin,ON/TA3J, announced to show up in SSB/FM on 160m-2m from various
locations from Dec 7-11. QSL via homecall.

PA, THE NETHERLANDS
The members of the Frisian Radio Amateur Group (FRAG, clubstation
PI4FRG) are celebrating the 35th jubilee of their club this month.
The special event station PF35FRAG is working until Dec 28.
QSL via PI4FRG. See also: http://pi4frg.cjb.net

PJ2, CURACAO, SA-099
Joeke,PJ2/PA0VDV, is working only in CW mainly on 30m/17m/12m from
Curacao (SA-099) until Dec 18. QSL via homecall.

PY, BRAZIL
Claudio,PY5PDC, will join the SOLP SSB category of the ARRL 10m Contest
as ZX10M. QSL via PY5PDC.

UA, RUSSIA
The special event station R20BIS is celebrating the silver jubilee of
the telecommunication company Bashinformsvyaz until Dec 31.
QSL via RU9WZ.

V3, BELIZE
John,AD8J, and Doug,W3NO, will join the ARRL 10m Contest as V31NO from
Placencia. QSL via W3NO.

V5, NAMIBIA
Ewald,V5/DJ2BQ, is working in RTTY on 80m-10m until Jan 18.
Dietmar,V5/DL3DXX (160m-10m, CW/SSB), Ulmar,V5/DK1CE (160m-10m, CW,
until Jan 2) and Mathias,V5/DJ2HD (160m-6m, SSB/RTTY, until Jan 12),
will join him on Dec 22.
QSLs for V5/DK1CE via DH3WO, all others via homecalls.

VK, AUSTRALIA, OC-001
Thomas,OZ1AA, began his trip around the world on a bicycle in Oct 2010.
He is working as VK8/OZ1AA from the north of Australia in the moment.
QSL via homecall. See also: http://www.cyclingtheglobe.com

VP8/A, ANTARCTICA, AN-016
8J1RL is the clubstation of the Japan Amateur Radio League (JARL) on
at the Japanese research station "SYOWA" which was founded in Jan 1957.

8J1RL is activated by members of the of the Japanese Antarctic Research
Expedition team (JARE). The team usually changes in February and there
is a new QSL design every year. QSL via bureau.

XU, CAMBODIA
Zorro,JH1AJT, Jay,JA1TRC, Aki,JA4EKO, Masaru,JA5AQC, Champ,E21EIC,
Kazu,JH1OGX, and other HAMs will be QRV as XU1A from Dec 5-17. They
plan to work with three stations simultaneously using 2 yagis, dipoles
and groundplanes in CW/SSB/digital modes on 160m-10m (maybe also 6m).
QSL via JH1AJT, OQRS and ClubLog will follow later.
See also: http://www.fgc.or.jp/english

DX WORLD GUIDE: CQ Communications, Inc., announced the 3rd edition of the
"DX World Guide" by Franz Langner,DJ9ZB. This book has 384 pages in
English and will be published as print or CD version.
See also: http://www.cq-amateur-radio.com

HL, SOUTH KOREA: Following rules apply to foreign licensees in South Korea:
When applying for a South Korean license foreign amateurs may choose
between a Korean callsign or HL*/homecall. The callsign blocks range
from HL1Z** to HL1Z** and the number depends on the location in Korea.
If HL1ZAA moves to area 5, he can apply for a permanent change to
HL5ZAA, if he only visits another area he can use HL1ZAA/5.
The foreign language repeater in Seoul was moved on top of a 600m high
mountain: RX 439.6 MHz, TX 434.6 MHz with 123 Hz subtone. Any language
other than Korean is allowed on this repeater.

Intangible Cultural Heritage of Humanity: The German amateur radio club
DARC introduced an application to the IARU Region 1 Conference 2011
in Sun City to take steps to protect the Morse code as a Intangible
Cultural Heritage of Humanity. This has been implemented now and the
Managing Board of the IARU Region 1 distributed application forms to
all member associations of IARU region 1, which can be adjusted to
local needs and then forwarded to their National UNESCO Commission.

LINKS: Current SOTA activities (mountain summits) are announced at:
http://www.sotawatch.org

Detailed information about current VHF activities can be found on the
VHF DX portal "Make More Miles on VHF" at: http://www.MMMonVHF.de

UPCOMING CONTESTS

Dec 8 UBA Winter Low Band Contest
Dec 8/9 ARRL 10m Contest
Dec 8/9 28 MHz SWL Contest
Dec 8/9 International Naval Contest
Dec 9 UBA Winter Low Band Contest

IOTA compiled by Klaus, DL7UXG (e-mail: iota@dxhf.darc.de)

Island activities:

AS-031, JD, Chichi/Haha/Muko Island: Makoto,JI5RPT, will be QRV again as
JD1BLY from Chichi-jima (WLOTA 2269, JCG 10007, Loc QL17cc) from
Dec 10-13. Listen for him in CW, SSB and digital modes on 40m-10m.
QSL via JI5RPT.
See also: http://www.ji5rpt.com/jd1 and http://twitter.com/jd1bly

EU-009, GM/MM, Orkney: Russell,G5XW, is going to visit Orkney (IOSA OR01,
SCOTIA OI14, WLOTA 1652) again from Dec 7-11. He will be touring the
island visiting friends and will operate as GM5XW from various QTHs.
QSL only direct via G5XW.

EU-025, IT9, Sicily Island: The team of II9P plans to take part also in the
upcoming ARRL DX 10m Contest. QSL via IT9CHU (bureau/direct).

NA-016, ZF, Cayman Island: Victoria,AE9YL, Michael,K9MK, and Carl,K9LA, will
show up as ZF1A from Cayman during the ARRL DX 10m Contest. They will
sign ZF2YL (AE9YL), ZF2MK (K9MK) and ZF2LA (K9LA) before and after the
contest. QSLs for ZF1A via K6AM (bureau/direct/LoTW) or via homecalls.

NA-031, W1, Rhode Island State group: Jim,KA3UNQ/p, plans to activate
several lighthouses in Rhode Island from Dec 6-9:
Dec 6: 1600-1800z Watch Hill (ARLHS USA-872)
Dec 6: 1900-2100z Point Judith (ARLHS USA-625)
Dec 7: 1300-1500z Sakonnet Point (ARLHS USA-718)
Dec 7: 1600-1800z Hog Island Shoal (ARLHS USA-373)
Dec 7: 1600-1800z Musslebed Shoal (ARLHS USA-959)
Dec 7: 1600-1800z Bristol Ferry (ARLHS USA-087)
Dec 7: 1830-2030z Prudence Island (ARLHS USA-675)
Dec 8: 1300-1500z Goat Island (ARLHS USA-548)
Dec 8: 1300-1500z Rose Island (ARLHS USA-703)
Dec 8: 1300-1500z Gull Rocks (ARLHS USA-362)
Dec 8: 1600-1800z Ida Lewis/Lime Rock (ARLHS USA-398)
Dec 8: 1900-2100z Brenton Reef (ARLHS USA-082)
Dec 8: 1900-2100z Brenton Reef L/V (ARLHS USA-1129)
Dec 9: 1300-1500z Beavertail, Conanicut Island (ARLHS USA-048/USA-1128)
Dec 9: 1300-1500z Whale Rock (ARLHS USA-883)
Dec 9: 1300-1500z Castle Hill (ARLHS USA-144)
Dec 9: 1530-1730z Dutch Island (ARLHS USA-250)
Dec 9: 1830-2030z Gould Island (ARLHS USA-958) or
Dec 9: 1830-2030z Conanicut Island (ARLHS USA-185)
His preferred frequencies in SSB are: 3875-3900, 7175-7200 kHz and
14260-14280 kHz. QSL via KA3UNQ (bureau/direct).

NA-054, C6, Berry Island: Rick,K6VVA, plans to become active as C6AVA from
Berry Island (WLOTA 1903) mainly in CW (maybe some SSB) on 40m/30m/20m
and 17m from Dec 7-12. Depending on the propagation he may join also
the ARRL DX 10m Contest. QSL only via N6AWD (bureau/direct).
See also: http://www.k6vva.com/iota/na054

OC-012, V6, Yap Islands: Haru,JA1XGI, is working as V63XG from Yap Island
from Dec 5-12. Activities are planned in CW on 40m-6m with focus on
30m/17m and 12m. QSL via JA1XGI.

See also: http://island.geocities.jp/v63xg/index.htm

OC-083, E5, Aitutaki group: Norman,5B4AIF, and his family are going to spend
their Christmas holidays in Tautu Village on Aitutaki (Loc BH01cd) from
Dec 10 until Jan 5. He will be QRV as E51E mainly in SSB and RTTY in
holiday style suing simple antennas. A few slow CW QSOs may be possible
as well. QSL via EB7DX (direct).
CW: 1825, 3525, 7020, 10105, 14025, 18075, 21025, 24895, 28025 kHz
SSB: 1840, 3793, 7185, 14215, 18160, 21295, 24950, 28485 kHz
RTTY: 3630, 7035, 10145, 14090, 18105, 21090, 24925, 28090 kHz
6m: 50105/CW and 50130/SSB
See also: http://aitutaki2012.com

OC-088, 9M6/9M8/V8/YB7, Borneo: Steve,9M6DXX, is struggling with the poor
conditions from his home QTH and has booked a hotel near the sea
(WLOTA 0119) from Dec 8-9. He plans to produce a big signal with
400 watts, verticals and other antennas at the sea. He is working in
SSB only and wants to join the ARRL DX 10m Contest as well.
QSL via M0URX. Please use also OQRS.
See also: http://www.telenius-lowe.info/amateur-radio.html

OC-097, 5W, Samoa Island: Ralph,H44RK, will stay in Apia on Upolu Island
(WLOTA 1944) Dec 8 until Mar 1 and will show up as 5W0RK on 20m-10m.
QSL via NR6M (bureau/direct). The log will be uploaded to the LoTW.

SA-003, PY0F, Fernando de Noronha Archipelago: Renner,PY7RP, plans to become
active as PY0FRP from Fernando de Noronha (DIB OC-01, WFF PYFF-016,
WLOTA 1208) from Dec 6-10. He will use a FT-450, a 4 ele yagi and G5RV
on 40m-10m. He will sign PS0F during the ARRL DX 10m Contest.
QSLs for both calls via PY7RP (bureau/direct).

SA-036, P4, Aruba Island: Thomas,K8CX, is signing P40CX from Aruba from
Dec 3-10 (including the ARRL DX 10m Contest). QSL via K8CX.

IOTA information: Following operations (May until November 2012) will be
accepted for IOTA credit: RI0K (AS-061), RI0K/P (AS-092),
VE2/VE3EXY/P (NA-177), P29VCX (OC-025, OC-103 & OC-135),
P29NI (OC-099), P29VPB (OC-069), E51AND (OC-124),
YB8XM/P (OC-249 & OC-271), LT0X (SA-087).
OC-271 (Babar Islands) is a valid IOTA group now.

Posting-Frequency: posted twice monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been
recently revived by an active moderation team. We are currently seeking
suitable information, FAQ, and bulletin articles from the entire
rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our
newsgroup.

We are seeking a replacement maintainer for the following information
bulletin formerly posted to rec.radio.amateur.* (and currently archived
at http://www.faqs.org/faqs/radio/personal-intro/ ):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

One significant omission, requiring immediate updates, for this article |
is that it does not mention newer amateur radio newsgroups created since |
it was written, including: |

rec.radio.amateur.antenna |
rec.radio.amateur.boatanchors |
rec.radio.amateur.dx |
rec.radio.amateur.equipment |
rec.radio.amateur.homebrew |
rec.radio.amateur.moderated |
rec.radio.amateur.space |

We are willing to provide any technical support necessary to get this
article updated and automatically posted again at a regular interval.
This would include establishing contact with the original maintainer for
any necessary permissions. We would prefer to seek a new, dedicated
maintainer at this time, rather than start auto-posting the original
article ourselves.

For more information about our newsgroup, see:
```

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

NZART Headquarters Infoline Special Issue 36s

7 December 2012

NZART Website: www.nzart.org.nz

In this issue:

Your National Association successfully negotiates access to the 600 kHz band. An InfoLine Special from NZART, representing Amateur Radio in New Zealand since 1926.

Amateur Access to 600 Metres

As members may be aware, the band 472 kHz to 479 kHz was allocated to the Amateur service for use on a secondary basis at the World Radiocommunication Conference (WRC) held earlier this year.

We have now agreed the basis on which New Zealand Amateurs will be given access to this band with the Radio Spectrum Policy and Planning Group of the Ministry of Business, Innovation & Employment:

· Frequency range: 472 kHz to 479 kHz

· Type of allocation: Secondary (see definition below)

· Power Output: 25 W eirp

· Bandwidth restrictions: None (the previous 200 Hz limit is removed)

As a result of this new allocation, Amateurs will no longer have access to the previous temporary allocation at 505 – 515 kHz. The Ministry has, however, agreed that the temporary use in the band 505 kHz to 515 kHz will be permitted for one further year, until the end of 2013, to provide amateurs with an opportunity to retune and/or rebuild their equipment.

The Amateur General User Licence has been updated to reflect these changes which take effect from 20 December 2012. The updated GURL can be found at:

http://www.rsm.govt.nz/cms/licensees/types-of-licence/general-user-licences/amateur-radio-operators

Definition of Secondary Allocation

For members who are unfamiliar with the concept of a secondary allocation, the following excerpt from the International Radio Regulations may be of interest:

“Allocations are made on a primary or on a secondary basis. Stations of a secondary service cannot cause harmful interference to stations of primary services to which frequencies are already assigned or to which frequencies may be assigned at a later date. Stations of a secondary service cannot claim protection from harmful interference from stations of a primary service to which frequencies are already assigned or to which frequencies may be assigned at a later date.”

Don Wallace, ZL2TLL, NZART Administration Liaison Officer

Housekeeping

Break-In-Closing Date Reminder: Copy for the Jan/Feb issue of
Break-In-closes on 10 Jan 2013.

Copy for Break-In: Copy is welcome in most electronic formats but word.doc files are preferred. Photos and other graphics should be send as separate discrete files (*.jpg preferred); not as embedded pix in the body of the text. Please ensure that suitable descriptive captions/legends are included with your copy. Early receipt of copy is much appreciated and all received copy will be acknowledged to confirm receipt.
Thank you for your cooperation.
John Walker ZL3IB Editor.

Break-In-AREC Column: The close-of-copy date is the 5 Jen 2013 for articles for publication in the AREC COLUMN OF BREAK-IN. Photos, if available, to be on a separate floppy or CD (with captions), posted DIRECTLY TO US. Use the Call Book address. All other material can go to e-mail:
zl3qr@nzart.org.nz or zl3ov@nzart.org.nz

Amateur Radio Newsline(tm) Report 1843 - December 7 2012

Amateur Radio Newsline report number 1843 with a release date of December 7, 2012 to follow in 5-4-3-2-1.

The following is a QST. Hams provide emergency communications as a massive typhoon hits the Philippines; The IARU Region 3 Monitoring System notes an increase in the number of intrusions into the amateur radio bands; hams in Taiwan say that they are in need of additional operating spectrum and the FCC plans to hold several hearings on the communications breakdowns caused by Hurricane Sandy. Find out the details are on Amateur Radio Newsline(tm) report number 1843 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS PROVIDE EMERGENCY COMMUNICATIONS IN WAKE OF TYPHOON BOPHA

When Typhoon Bopha hit the Philippines, it uprooted trees, downed power lines, sparked landslides and made 40,000 people head for shelters. And ham radio was out in the middle of it doing what it does best. Providing emergency communications as we hear from Amateur Radio Newsline's Bill Pasternak, WA6ITF:

--

When it made landfall on December 4th local time in the Philippines, Typhoon Bopha was the strongest of about 20 typhoons to affect that country in recent times. The storm brought with it heavy rain and winds gusting 110 to 130 miles per hour as it came ashore near the city of Mindanao.

The Philippine Amateur Radio Association had its emergency radio operations in activated by the time the typhoon struck. Ham radio operators immediately began assisting in the communication needs of several cities using all available means of communication. This included a high frequency net on 7.095 MHz, VHF FM on 144.740 MHz, the internet and even social media to monitor the situation and give updates to those in need.

RADNET 5, a local amateur radio club in Tacloban was active in helping provide the city with a vital communications link. It's members were in constant coordination with the City Disaster Risk Reduction

Management Council. As this report is prepared, so far it has assisted in the evacuation of 5,700 families.

RADNET 5 also was assisting the Red Cross in Tacloban and Saint Bernard. The government of Tacloban City has been using its Convention Center as one of its evacuation centers.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the Newsroom in Los Angeles.

--

According to news reports, casualties have been minimal, due to preparations, the cooperation of evacuees and the mammoth response and recovery efforts. More on this story as developments warrant. (DU1EV, PARA)

**

INTRUDER WATCH: IARU REGION 3 MONITORING SYSTEM DETECTS NEW INTERERENCE

The IARU Region 3 Monitoring System notes an increase in the number of intrusions in the higher frequency bands, particular from Over the Horizon Radar on 15 meters. In the newsletter Peter Young VK3MV reports that some of these radar emissions into northern Australia are very strong and a report has been filed with the Australian Regulator which is seeking information and their removal.

With high frequency propagation improving there are more sightings of intrusions on 10 meters from low power commercial like services. These include reports of High Frequency Man Pack operations that are being logged. Unfortunately, due to the random nature of these signals locating their source is difficult.

Also, reported is a Burmese broadcast station operating on 7 dot 110 MHz in the 40 meter band. It has been reported to the Australian telecommunications regulator in the hope of using international diplomatic channels to get it to move out of the 40 meter ham radio allocation. (IARU R-3)

**

RESTRUCTURING: TAIWAN RADIO HAMS SEEK ADDITIONAL ALLOCATIONS

Hams in Taiwan say that they are in need of additional operating spectrum and have prepared a report that explains what, where and why. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has the details:

--

Taiwan's national society the CTARL, presented a paper regarding amateur radio in that country at the recent IARU Region 3 conference. In it the Taiwanese ham radio community says that it is seeking to expand several amateur allocations.

On 80 meters where they currently only have 3.5 to 3.5125 and 3.55 to 3.5625 MHz, they are seeking an allocation from 3.5 to 3.9 MHz. On 6 meters they have just 50 to 50.0125 and 50.11 to 50.1225 MHz. As such they are seeking the entire 50.0 to 54.0 MHz band and to add 146 to 148 MHz to their existing 144 to 146 MHz allocation.

Taiwan has very limited amateur allocations in the UHF and Microwave bands, only 430 to 432, 1260 to 1265 and 2440 to 2450 MHz. There they seek to expand these allocations to from 430 to 440 and 1240 to 1300 MHz.

Of interest, the CTARL reports that its membership is now just 362. In 2000 the IARU reported it had a membership of 1264 out of an amateur population of 24,324. This indicates that they have lost 72% of their members this century and one can speculate that perhaps the number of radio amateurs in that nation has had a similar sharp decline.

For the Amateur Radio Newsline, Im Jim Meachen, ZL2BHF, in Nelson. New Zealand.

--

By way of comparison, Taiwan's population is 23 million or about 1/14th that of the United States. The US now boasts over 700,000 FCC licensed amateur radio service licenses. (IARU-R3)

**

ENFORCEMENT: AUSTRALIA'S ACMA TO CRACK DOWN ON NON COMPLIANT RF INTERFERENCE CAUSING DEVICES

The Australian Communications and Media Authority is looking for devices that pose a high a high risk to the orderly use of the radio spectrum and to public safety.

ACMA Field Staff, particularly in Western Australia, are looking for such items as mobile phone and GPS jammers, both of which are prohibited in VK land. Also on the ACMA's list of illegal communications devices are mobile phone repeaters, and non-compliant devices such as high power cordless phones and headsets.

A comment by a radio amateur to the ACMA claimed there was concern about non-compliant imported goods that are stamped as being compliant. The unidentified ham wants the ACMA to clamp down on switch mode power supplies used in plasma TV sets that don't meet the standards and cause much of the interference.

As of now, the ACMA rules enforcement campaign will include education and traditional legal measures. It will also focus on improving the supply chain compliance of on-line, or over the internet purchased devices. In other words if you are a seller of such goods on any of the on-line auctions that are banned in Australia, the ACMA will be taking a long and hard look at you, no matter what nation you operate out of. (VK3PC)

RESCUE RADIO: MID SEVERN RAYNET ACTIVATED AFTER FLOOD WARNING

The United Kingdom's Mid Severn Valley RAYNET called out on Sunday, November 25th. This, in support of flood preparations as waters rose on a near by river.

With very short notice available members of Mid Severn group were requested by the Worcestershire County Council County Volunteers Emergency Committee to be ready for assignment due to the rising waters of the River Severn. Emergency Planning Officers were concerned at the potential for flooding of adjacent residential properties in parts of Worcester city centre.

Multi agency teams from the County Volunteers Emergency Committee were tasked with notifying homeowners of the threat as well as issuing warnings advice and leaflets. They were also to report back to Social Services on those residents who may not be able to evacuate and could require rest centre assistance.

G8WOX, G6DQM and M0VNG deployed with the team. Having on the ground liaison through RAYNET channels reportedly made of the task a lot easier, especially with some of the properties being so new and road names were not yet in place.

The RAYNET teams completed the task in the early evening and stood down. News reports say that residents were most appreciative of the efforts made to alert them. (UK RAYNET, Southhgate)

RADIO LAW: KALISPELL MONTANA CITY COUNCIL MEMBERS DIVIDED OVER CITY CELLPHONE BAN AND HAM RADIO EXEMPTION

A draft cell phone ban for drivers in Kalispell, Montana from using cellphones while in motion has drawn mixed responses from City Council members. This is because one council member seems to object to exemptions made for users of other portable and fixed vehicle electronics including ham radio gear.

The current proposal mirrors bans enacted in most other Montana cities. The draft ordinance would prohibit people from using handheld electronic communication devices such as cell phones while they are driving or riding a bike. Breaking the law would be considered as a primary offense and civil infraction punishable by fines up to $100 for

a first offense and $300 for later offenses.

However some council members don't feel that the proposed ban goes far enough. Council person Kari Gabriel questioned why the ordinance does not include portable music devices such as iPods. She also expressed concern about an exemption in the ordinance for people who hold amateur radio operator licenses.

In a statement quoted by the press, Gabriel said that she does not think the overall idea is bad, but the ordinance is not written as it should be. In other words hinting that it should be far more inclusive.

Other council members raised concerns about how the ban would be enforced and how effective it would be with so many other activities contributing to distracted driving. Some of them expressed hope for a countywide or even statewide ban on all such activities. (Daily Interlake)

**

RADIO LAW: FCC PLANS HEARINGS ON EFFECTS OF HURRICANE SANDY

The FCC plans to hold several field hearings on the challenges faced by communications networks in the wake of Hurricane Sandy.

Though the agency focused on wired and wireless phones in the announcement, the commission also included broadcasting, noting its experts will want to know how the power held up in studios and at transmitter sites.

Specifically, the agency is asking things like: When commercial power is unavailable, how long should back-up power sources be expected to last?

Beginning in the New Year, the hearings will focus on the challenges faced by communications service providers, state and local officials, emergency personnel and consumers before, during and after Sandy as well as other natural disasters. Business representatives, public safety officials, engineering and academic experts, consumers and other stakeholders will take part.

New York Senator Chuck Schumer had called for the commission to develop a roadmap to better protect critical communications functions during major disasters. (RW)

**

ON THE SCREEN: HAMS PROVIDE REALISTIC WAR DEPARTMENT SET FOR FILM LINCOLN

Members of the Morse Telegraph Club are reported to have played an important role in the production of the Steven Speilberg motion picture "Lincoln."

Jim Wades, WB8SIW, is the International President of the Morse Telegraph Club. He says that several members provided period telegraph instruments for use in the construction of the War Department Set.

Jim Wades was employed as a Technical Advisor for the production, worked with set designers over a period of months to develop the War Department telegraph scenes. Wades coordinated the process of procuring the necessary instruments and served as a historical consultant as the telegraph scenes were developed. Most notably W1TP, WB0TUA, N7JKD and Roger Reinke provided telegraph instruments to equip the sixteen operating positions portrayed at the War Department set.

Nine of the sixteen telegraph positions depicted in the War Department were fully operational. These instruments could be operated in any combination through the use of a specialized computer program and terminal units custom built by WB8SIW for the process. When necessary, a hand key could be inserted in the individual telegraph loops so messages could be improvised

Jim Wilson, K4BAV, and his son, Matt Wilson had minor roles as Extras. K4BAV also worked with production staff and the actors to explain telegraph technology and the role of the telegrapher.

The Morse Telegraph Club is an association of retired railroad and commercial telegraphers, historians, radio amateurs and others with an interest in the history and traditions of telegraphy and the telegraph industry. (ARRL, RAC, WIA)

**

HAM RADIO ON STAGE: TITANIC RADIO SIGNAL MAN INSPIRES NEW STAGE SHOW

The Western Mail newspaper reports that the man who picked up the distress signal from the Titanic over his amateur radio from his shed in Pontllanfraith has inspired a new stage drama.

Called Whispers On The Waves, the play was motivated by the real life story of Welsh wireless operator Artie Moore. Moore is reported to have heard a distress signal from Titanic before news of the disaster arrived in the UK.

The cast of the show features children from Meadowbank School in Cardiff. More is on-line at tinyurl.com/titanic-stage-show. (Western Mail)

THE SOCIAL SCENE: 2013 SOUTHEASTERN VHF SOCIETY CONFERENCE

The 2013 Southeastern VHF Society Conference, sponsored by the Florida Weak Signal Society, will be held next April 19th and 20th. This at the Hilton Cocoa Beach Oceanfront in Cocoa Beach, Florida.

Planned so far are a full slate of events including, a surplus tour, antenna range and noise figure testing, a Friday luncheon and Friday

night flea market. The Saturday night banquet will have awards for the best paper and the best presentation.

For more information plase check on-line at www.svhfs.org or contact Chuck Hoover, K0VXM, by e-mail to k0vxmfl (at) gmail (dot) com. (K0VXM)

**

THE SOCIAL SCENE: PROTECTED BEETLE SPECIES CAUSES CANCELLATION OF 2013 PALM SPRINGS HAMFEST

The Palm Springs Hamfest slated for Saturday, January 26th 2013 has been cancelled due to an endangered species of bug that lives in and around the shows venue. This after the city of Riverside County, California, acts to protect the Dinocoma Brunnescens beetle habitat.

Nope we are not kidding. According the Desert RATS Amateur Radio Club that sponsors the event part of the area in which previous Palm Springs Hamfest had been held has been deemed a protective habitat for this creature of nature. As such, it is therefore no longer available as an event site. And to make matters worse, the radio club was not notified of the situation in time to locate another venue for the 2013 event.

Current plans are to hold the next Palm Springs Hamfest the third weekend in March of 2014 at a venue that is ham radio friendly rather than beetle protected. In the meantime the Desert Rats says that it regrets any inconvenience to those who already made travel and accommodation plans.

For further information you may contact Desert RATS Past President, Peter Reinzuch, VE7REZ by e-mail to ve7rez (at) gmail (dot) com. (Desert RATS ARC)

**

SUPERSTITION HAMFEST DELAYED. TO BE RESCHEDULED FOR EARLY 2013.

The Superstition Arizona Hamfest, that was originally slated for Saturday, December 1st has been pushed back at least 60 days. This due to what's being termed as a last minute paperwork timing issue.

According to Larry Kuck, WB7C, the problem arose on the Monday before the hamfest and sponsors were not able to resolve it in time to keep the scheduled date. Kuck advises that those who have purchased Main Prize drawing tickets are advised to hold on to them as they will be good toward the same drawing when the hamfest is held sometime in early 2013.

For further updates on the delay and to what for the new date please take your web browser to tinyurl.com/superstition-delayed. (WB7C, QRZ.com)

NAMES IN THE NEWS: RADIO WORLD EXCELLENCE IN ENGINEERING AWARD WINNER ANNOUNCED

Turning to names in the news, word that Paul Brenner will receive the 2012 Radio World Excellence in Engineering Award from the editors of Radio World. Brenner is senior vice president and chief technology officer for Emmis Communications. He also is originator of the HD Radio data distribution consortium business model and serves as president of the Broadcaster Traffic Consortium, LLC (BTC).

Radio World is a newspaper for broadcast radio managers and engineers. Recipients of the Radio World Excellence in Engineering Award are said to represent the highest ideals of the U.S. radio broadcast engineering profession and reflect those ideals through contributions to the industry. The announcement of Brenner's selection was made by U.S. Editor in Chief Paul J. McLane (RW)

**

NAMES IN THE NEWS: ARRL CEO INTERVIEWED BY URGENT COMMUNICATIONS MAGAZINE

ARRL Chief Executive Officer Dave Sumner, K1ZZ, has attributed the increased popularity in ham radio in part to the do-it-yourself movement that is sweeping the country and the world.

Author Glenn Bischoff of Urgent Communications magazine took the opportunity to interview K1ZZ while he was visiting New York. Sumner is quoted as saying that the perception is that we're stuck in the Sixties. But the number of licenses continues to grow. In fact, this is the sixth straight year of growth.

K1ZZ attributed at least part of the increased popularity in part to the do-it-yourself movement. He noted that so-called D-I-Y clubs are popping up from coast to coast.

HAM HAPPENINGS: 2013 INTERNATIONAL LIGHTHOUSE AND LIGHTSHIP WEEKEND

While its still months away, plans are already going forward for the 3013 International Lighthouse and Lightship weekend as we hear from Jim

Linton, VK3PC:

--

The 100th registration for this event is in. It comes from the Deutscher Amateur Radio Club, Emden clubstation DL0EM at the Campen Lighthouse, on the North Coast of Germany.

Active since 1891 with Germany's most powerful lighthouse lamp, in the mouth of the Ems River, and with its lattice tower construction it stands 65 metres or 213 feet tall.

Listen for clubstation DL0EM with a team of operators on the HF bands.

The International Lighthouse and Lightship Weekend is an annual fun and friendly event sponsored by the Ayr Radio Group on the third full weekend of August.

The basic objective is to promote public awareness of the historic structures and their need for preservation, promotion of amateur radio and to foster international goodwill.

For the Amateur Radio Newsline this is Jim Linton VK3PC.

--

If you would like to know more or register online for the next event on August the 17th and 18th visit the website illw dot net

(VK3PC)

HAM HAPPENINGS: YOUNGSTERS ON THE AIR THE SUMMER 2013

IARU Region 1 Youth Coordinator Lisa Leenders, PA2LS sends us word on plans for next years European Youth Radio Camp or YOTA. Amateur Radio Newsline's Heather Embee, KB3TZD, has more:

--

During the summer of 2013, a youth radio camp called Youngsters on the Air will be held in Estonia. The event is being organized by the Estonian Radio Amateurs Union. During this week teams of young radio amateurs from 10 different European countries will be participating in different ham radio related activities. These include presentations, competitions, visiting radio stations and much more.

A team consists of a team leader, who could be an older person, and 4 team members ranging in the age from 14 to 25. There will be 10 teams in total representing different European member associations of IARU Region 1.

This outstanding ham radio youth event will take place near the city of Tartu. If you are in Europe and if your organization is interested in taking part, please respond not later than December 20th by means of

the downloadable form that you will find on-line at tinyurl.com/European-youth-radio.

For the Amateur Radio Newsline, I'm Heatrer Embee, KB3TZD, reporting from Berwick, Pennsylvania.

--

The date for this European ham radio youth outing are August 5th to the 12th of 2013. And as previous events in Romania and a combined outing in the Netherlands and Belgium have shown, this will be an amazing experience for the young hams which they will not soon forget. (IARU Region 1)

**

RADIO PHENOMA: IRELAND IS CAMPBELL ISLAND'S ANTIPODE

The much-anticipated DXpedition to Campbell Island, a sub-Antarctic island south of New Zealand, is now underway. And now comes word that Campbell Island's antipode which is described as the point on the Earth's surface diametrically opposite to its location is not far off the south-west coast of Ireland.

Nigel Cawthore, is G3TXF, in Surry, England. He has pointed out that this should provide considerable propagation enhancement across the spectrum for Ireland stations near the antipode. This due to the phenomenon of antipodean focusing which at least in theory can boost signal levels between stations located near their respective sides of the path.

Or to put it another way, those with hams living in Cork and Kerry may be very popular over the next few weeks. (IRTS)

**

DX

In DX, H44RK will be active as 5W0RK from Samoa between December 8th and March 3rd from Samoa. Operations will be on 20 through 10 meters using SSB and the Digital modes. QSL via NR6M.

W8YCM will be on the air stroke 6Y5 from Jamaica until the new year. Hes been heard on 17 through 10 meters using SSB. QSL via his home callsign.

ZS6RI will be active from Lesotho for 20 weeks beginning December 17th using the call 7P8RI from Lesotho. Operations will be on all HF bands using CW, SSB and the Digital modes. QSL via details are at QRZ.com.

TA3J will be active stroke Oh N from various locations in Belgium between December 7th and the 11th. Operations will be on 160 through 2 meters using SSB and FM. QSL to his home callsigneau

And word that JH1NBN will be active from both Pohnpei Island and Yap Island in the not to distant future. He will use the call V63AQ and will be operational on the High Frequency bands using SSB. Moire details to follow. QSL via home call.

N2GG will be on the air as C6AGG from Grand Bahama Island through December 13th. Activity is holiday style on 80 through 10 meters using mostly SSB with some CW. QSL via N2GG.

The Italian Dxpedition Team has announced that its next operation will be from Burkina Faso between February and March 2013. This will be a 15 day affair on all bands and using all modes. The pilot station for HF operation is IK7JWY, and the pilot for 6 meter band is IK0FTA with real time logging on line by IH9GPI. More o this upcoming operation is on-line at i2ysb.com/idt

Lastly, K7ZO will be active from Nicaragua as YN5ZO through December 10th. Operations will be on 40 through 10 meters, including 30, 17 and 12 meters using SSB and RTTY. QSL via K7ZO direct or using Logbook of the World.

(Above from various DX news sources)

**

THAT FINAL ITEM: CELEBRATING THE MAYAN END OF THE WORLD

Finally this week, according to one of the three Mayan Calendars, the end of the world will occur on December 21, 2012. And to celebrate this possibly once in a lifetime event, special event station N-Zero-D which stands for Now Zero Days will be activated on 80 through 10 meters and on several satellite passes for three days during and after the planets destruction. Amateur Radio Newsline's Norm Seeley, KI7UP, takes a look at the operation and what the Mayans say is to come:

--

According to the event planners down in Texas, December 20th will be the celebration of the end of the world. December 21, the day of destruction, they will be on the air as long as possible. As to December 22nd, well that is a little iffy right now.

And less we forget to mention it, you too can become an Official Doomsday Station by registering at www.nowzerodays.com . Those who do will receive a registration number and the authority to identify yourself as "Official Doomsday Station" followed by your Official Doomsday Number.

Official Doomsday stations will receive the Doomsday Station Certificate. Stations contacting at least 10 Official Doomsday Stations during the event will be recognized on the group's website. If there still is one.

QSL's with Self Addressed Stamped Envelope to KK5W at the address on QRZ.com. If Doomsday actually does happen, the event sponsors regret

that a QSL will not be possible so hold on to your QSL card and SASE at least until December 22nd.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, waiting it out here in Scottsdale, Arizona.

--

And if we might add a suggestion of our own: If that particular Mayan calendar is correct and December 21st is to be the end of the world, we are told that the best way to enjoy it is to watch it all implode from your picture window table at Milliways. That's the famed restaurant at the end of the universe. You can find complete directions on how to get there in your copy of the Hitchhikers Guide to the Galaxy authored by the late Douglas Adams. And most important of all, don't forget to bring along your Babblefish and at least one clean towel. (N0D)

==> + AMATEUR RADIO IN SPACE: NASA NOW ACCEPTING APPLICATIONS FOR
HOSTING A REAL-TIME CONVERSATION WITH ISS CREWMEMBERS

NASA is now accepting proposals from US schools, museums, science
centers and community youth organizations -- individually or working
together -- to host an Amateur Radio on the International Space Station
(ARISS <http://ariss.rac.ca/oindex.htm>) contact between May 1, 2013
and November 1, 2013. To maximize these radio contact opportunities,
NASA is looking for organizations that will draw large numbers of
```

participants and integrate the contact into a well-developed education plan. Radio contacts are approximately 10 minutes in length. ARISS contacts are supported by the program's US partners -- the ARRL and AMSAT <http://www.amsat.org/> -- and their member volunteers, as well as other international space agencies and Amateur Radio partners. Proposals are due January 28, 2013.

Interested parties can visit the ARRL website <http://www.arrl.org/amateur-radio-on-the-international-space-station> or the NASA Teaching From Space website <http://www.nasa.gov/education/tfs/ariss> for information about proposal requirements and how to submit a proposal, as well as links to audio and videos of archived contacts. Five information sessions are also available for groups who are considering submitting an ARISS proposal. Access to the Internet and a telephone line are required to connect to a session. Information on how to sign up for these sessions is available on the ARRL and NASA websites.

==> + ON THE AIR: ROOKIES RIDE THE WAVE IN THE ARRL CW ROOKIE ROUNDUP

Newly licensed CW buffs can get their copying skills in shape on Sunday, December 16 as the CW edition of the ARRL Rookie Roundup takes to the airwaves! The Rookie Roundup combines a competitive event with some on-the-air training, with the goal of bringing fun and Elmering into the 21st century. Who is a Rookie? Any amateur licensed for three years or less, regardless of license class. If you received your license in 2010, 2011 or 2012, you're eligible to compete as a Rookie; stations licensed before 2010 can only submit checklogs, but they will be recognized in the final results. Old Timers are encouraged to get on the air and work the Rookies. This is an immediate, hands-on way to teach good operating practices to those just getting started. The Rookie Roundup is also an excellent activity for clubs, offering a chance for club members to open their doors to those newer club members. Read more here <http://www.arrl.org/news/rookies-ride-the-wave-in-the-arrl-cw-rookie-roundup>.

==> + FCC NEWS: KANSAS HAM ISSUED $10,000 FINE FOR OPERATION OF UNLICENSED BROADCAST STATION

On December 5, Glen Rubash, KC0GPV, of Dwight, Kansas, was issued a $10,000 fine for what the FCC called "willfully and Repeatedly" violating Section 301 of the Communications Act of 1934, as amended, by operating an unlicensed radio transmitter on the frequency 88.3 MHz in Manhattan, Kansas.

In response to a complaint, agents from the FCC's Kansas City office used direction finding equipment techniques to locate the source of radio frequency transmissions on the frequency 88.3 MHz. According to a Notice of Apparent Liability for Forfeiture issued on December 6, agents found an FM transmitting antenna mounted on a pole next to a residence in Manhattan, Kansas on September 26, 2012. The agents

determined that the signals on 88.3 MHz exceeded the limits for operation under Part 15 and therefore required a license. The FCC noted that its records showed that no authorization was issued to Rubash or to anyone else for operation of an FM broadcast stations at or near this location. Read more here <http://www.arrl.org/news/kansas-ham-issued-10-000-fine-for-operation-of-unlicensed-broadcast-station>.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature is a concise monthly update of some of the things that the ARRL is doing on behalf of its members. This installment -- which covers the month of November -- takes a look at the November elections for ARRL Director and Vice Director, the new QST app for Apple devices, bug fixes for ARRL's Logbook of The World, W1AW activities, , reports from the Official Observer Desk and more. Read more here <http://www.arrl.org/news/arrl-in-action-what-have-we-been-up-to-lately-52>.

==> + ON THE AIR: ARRL UHF/MICROWAVE BAND PLAN COMMITTEE SEEKS INPUT ON 6 AND 3 CENTIMETER BANDS

Last year, in recognition of the need to update the published band plans for our UHF and microwave bands, the ARRL Board of Directors formed the UHF/Microwave Band Plan Committee to develop revised national plans for the amateur bands between 902 MHz and 3.5 GHz. After receiving extensive user input, the committee completed its task and the resulting band plans were approved by the Board in July 2012. The committee has now received an additional assignment to conduct a similar update to the 6 and 3 centimeter bands. In order to do this effectively, the committee needs to know how various segments of these bands are now being utilized around the country. You can help them by sharing what you know about local usage in your area and by asking other users -- both individuals and groups -- to do the same. Read more here <http://www.arrl.org/news/arrl-uhf-microwave-band-plan-committee-seeks-input-on-6-and-3-centimeter-bands>.

==> ARRL INVITES NOMINATIONS FOR 2012 INTERNATIONAL HUMANITARIAN AWARD

Nominations for the 2012 ARRL International Humanitarian Award close December 31, 2012. This award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize those radio amateurs who have used ham radio to provide extraordinary service to others in times of crisis or disaster.

As one of the few telecommunication services that allow people throughout the world from all walks of life to meet and talk with each other, Amateur Radio spreads goodwill across political boundaries. The ARRL International Humanitarian Award recognizes the Amateur Radio Service's unique role in international communication and the assistance amateurs regularly provide to people in need. Read more here

<http://www.arrl.org/news/arrl-invites-nominations-for-2012-international-humanitarian-award>.

==> SOLAR UPDATE

Tad Cook, K7RA, reports: Solar activity declined again this week, with the average daily sunspot numbers dropping 17.8 points, from 78.9 to 61.1, while the average daily solar flux declined 19.4 points, from 121 to 101.6. The latest prediction from NOAA/USAF has the solar flux at 105 and 110 on December 6-7, 115 on December 8-9, 120, 125 and 130 on December 10-12, 135 on December 13-17, then 130, 125 and 120 on December 18-20, 115 on December 21-23, and back down to 110 on December 24-27. The predicted planetary A index is 5 on December 6-13, 8 on December 14-15, 5 on December 16-28, and rising to 8 on December 29-30. Look for more on the ARRL website on Friday, December 7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>.

==> + ARRL RECOGNIZES: ROBERT BASTONE, WC3O, WINS NOVEMBER QST COVER PLAQUE AWARD

The winner of the November QST Cover Plaque award is Robert Bastone, WC3O, for his article "A Different Way to Assemble PL-259 Coax Plugs <http://www.nxtbook.com/nxtbooks/arrl/qst_201211/index.php?startid=34>." Congratulations Robert! The QST Cover Plaque Award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll web page <http://www.arrl.org/cover-plaque-poll>. Cast a ballot for your favorite article in the December issue today.

==> + RAC ANNOUNCES NEW INCOMING QSL BUREAU ADDRESS

Effective immediately, Radio Amateurs of Canada (RAC <http://www.rac.ca/>) has instituted a new, centralized address for its Incoming QSL Bureau: RAC National Incoming QSL Bureau, Box 51, Saint John, NB E2L 3X1, Canada. RAC International Affairs Officer George Gorsline, VE3YV, told the ARRL that hams should no longer send any cards through the provincial QSL bureaus. Please direct any questions regarding this new policy to Gorsline via e-mail <ve3yv@rac.ca>.

==> + NEW QUICKSTATS POLL NOW AVAILABLE ON ARRL WEBSITE

Four new poll questions have just been published on the QuickStats page <http://www.arrl.org/quickstats> on the ARRL website. Let your voice be heard!

Questions in this month's QuickStats poll:

- What is your outlook for Amateur Radio in 2013?
- How do you feel about a possible low frequency allocation <http://www.arrl.org/news/fcc-seeks-to-assign-entire-amateur-portion-of-160-meter-band-to-primary-status-to-amateur-radio-serv>

for US amateurs?
- Have you added the new digital QST app
<http://www.arrl.org/news/em-qst-em-there-s-an-app-for-that> to your
iPad, iPhone or iPod touch?
- Is your call sign on prominent display at your home station?

Visit the QuickStats page <http://www.arrl.org/quickstats> and be sure
to bookmark it in your browser. Results from this QuickStats poll will
be published in the March 2013 issue of QST on the QuickStats page,
located in the rear advertising section of the magazine. Along with
monthly poll results, QST QuickStats offers colorful charts and graphs
that highlight interesting Amateur Radio statistics.

==> THIS WEEK IN RADIOSPORT

This week:

- December 7 -- NCCC Sprint
- December 8-9 -- ARRL 10 Meter Contest <http://www.arrl.org/10-meter>;
International Naval Contest
- December 9 -- SKCC Weekend Sprintathon; CQC Great Colorado Snowshoe
Run
- December 12 -- NAQCC Straight Key/Bug Sprint; NAQCC-EU Monthly Sprint
- December 12-13 -- CWops Mini-CWT Test

Next week:

- December 14 -- NCCC Sprint; Russian 160 Meter Contest
- December 15 -- OK DX RTTY Contest; Feld Hall Sprint
- December 15-16 -- Croatian CW Contest
- December 16 -- ARRL Rookie Roundup (CW)
<http://www.arrl.org/rookie-roundup>; QRP ARCI Holiday Spirits Homebrew
Sprint
- December 17 -- Run for the Bacon QRP Contest

All dates, unless otherwise stated, are UTC. See the ARRL Contest
Branch page <http://www.arrl.org/contests>, the ARRL Contest Update
<http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest
Calendar <http://www.hornucopia.com/contestcal/index.html> for more
information. Looking for a Special Event station? Be sure to check out
the ARRL Special Event Stations web page
<http://www.arrl.org/special-event-stations>.

==> UPCOMING ARRL SECTION, STATE AND DIVISION CONVENTIONS AND EVENTS

- January 18-19 -- ARRL North Texas Section Convention
<http://www.arrl.org/hamfests/north-texas-section-convention-cowtown-hamfest-
1>,
Fort Worth, Texas
- January 19 -- ARRL Southern Florida Section Convention
<http://www.arrl.org/hamfests/southern-florida-section-convention-3>,
Fort Myers, Florida
- January 25-26 -- ARRL Mississippi State Convention

D*STAR on 10 meters and 6 meters-- Yes you can !!!

Posted: 06 Dec 2012 12:59 PM PST
http://forums.qrz.com/showthread.php?371081-D*STAR-on-10-meters-and-6-meters-Yes-you-can-!!!&goto=newpost

Icom just came out with a new radio which does DC to daylight named the
IC-9100 which can take a new DSTAR board and will enable the user to

work D*STAR simplex on 6 meters and 10 meters, so this effectively moves
DSTAR into HF.

I would appreciate anyone who buys one of these to try it out and comment
on the propogation and contacts they make on either band.

73 all,

Bob Rice, Kilo Golf Four Romeo Romeo November

//
HamRadioNow: FlexRadio SDR Update; A Packet Hailing Channel?; New Life for
Net-44?

Posted: 06 Dec 2012 08:47 AM PST
http://forums.qrz.com/showthread.php?371048-HamRadioNow-FlexRadio-SDR-Update-A-Packet-Hailing-Channel-New-Life-for-Net-44&goto=newpost

HAMRADIONOW.tv

Episodes 36 and 37 from the ARRL/TAPR DCC

Episode 36: FlexRadio ☐ SDR Architecture. This is a bit of a dog and pony
show from FlexRadio's

Stephen Hicks N5AC, but they've got some really talented dogs and ponies.
With their new 6000 Series,

Flex has moved the SDR power from your PC into their box. Stephen explains
why, and he presents

plenty of basic and advanced SDR concepts, so you'll get your money's worth.

HamRadioNow

Episode 37: A Hailing Channel for Packet Radio? / Revising Net-44.

NW Digital Radio's Bryan Hoyer K7UDR and John Hays K7VE share the stage to update

two aspects of Packet Radio. First, Bryan aims as solving the problem of keeping all local activity

on the same page, but not on the same frequency. His recommendation: APRS. Paging Bob

Bruninga! Are you cool with this? (well... he's in the audience, so you'll see). Bryan also reviews their

new company's first product, a "smart" UHF data radio with an Ethernet/browser interface that can

generate multiple data modes at up to 56 kbps. Next, John recalls the "old" AMPRNET Net-44

domain and sees plenty of new uses for it in todays connected world.

HamRadioNow

The ARRL/TAPR DCCis an annual, three-day conference featuring presentations on a variety of

technical and operational aspects of Amateur Radio. This year's DCC, held in Atlanta last

September, had 16 of the 45-minute main presentations, the usual Saturday banquet talk,

and a four-hour "deep dive" into GNU radio on Sunday. HamRadioNow videotaped all the talks,

and we are now releasing them on-line. We'll continue with one or two a week until

you have them all.

Watch these episodes at our web site, www.HamRadioNow.tv.

The following is a QST. Hams provide emergency communications as a massive typhoon hits the Philippines; The IARU Region 3 Monitoring System notes an increase in the number of intrusions into the amateur radio bands; hams in Taiwan say that they are in need of additional operating spectrum and the FCC plans to hold several hearings on the communications breakdowns caused by Hurricane Sandy. Find out the details are on Amateur Radio Newsline report number 1843 coming your way right now.

//
Restore 1.9-2.0 MHz to Primary Status?

Posted: 06 Dec 2012 09:59 AM PST
http://www.eham.net/articles/29449

In ET Docket 12-338 the FCC proposes to raise the secondary amateur service allocation in the 1900-2000 kHz band segment to primary status, providing amateur radio operators nearly exclusive use of the band. At present, amateur use of the top half of the 160m band is on a secondary basis,

shared with Radiolocation beacons that have priority over amateurs on any shared frequency.

Outbound International Reply Coupons Discontinued

Posted: 07 Dec 2012 08:14 AM PST
http://forums.qrz.com/showthread.php?371180-Outbound-International-Reply-Coupons-Discontinued&goto=newpost

International Reply Coupons

Three respondents supported the discontinuance of selling international reply coupons, stating the Postal Service should ☐☐streamline☐☐ their product offering of low volume items. Ninety-one respondents opposed the discontinuance of international reply coupons. Of these, 63 respondents identified themselves as U.S. amateur radio operators who rely on international reply coupons to confirm radio contacts through the exchange of ☐☐QSL cards☐☐ and who stated that no other practical way exists for this kind of exchange. Some of the other comments from the group of 91 included the following statements:

(1) ☐☐In many countries, it☐s either illegal to possess or mail foreign currency, or currency is routinely stolen from the mail;☐☐

(2) ☐☐In many countries the amateur radio operators do not have funds available to answer QSL requests as their income is much lower than we consider average in the United States;☐☐

(3) ☐☐There is no alternative mechanism to supply foreign correspondents with return postage;☐☐ and

(4) ☐☐As a minimum, the USPS should continue to sell IRC☐s at the www.usps.com store or through a few dispersed Post Offices that would sell them by mail to people beyond reasonable driving distance.☐☐

As prescribed in the Postal Regulatory Commission☐s (PRC) Order No. 1541, the PRC approved the Postal Service☐s proposal to discontinue outbound international reply coupons, while retaining inbound international reply coupon service. The PRC determined that the proposal to discontinue outbound international reply coupons was not inconsistent with the statute, and acknowledged that the small number of consumers, such as amateur radio operators, who purchase international outbound reply coupons, will no longer be able to do so, but they will still have options. For countries to which money orders may be sent, once the U.S. sender ascertains (or estimates) the cost of sending the QSL card from the foreign country to the

U.S., the U.S. sender can obtain and send a money order in that amount. Finally, senders and recipients may find it more convenient and less costly to use an online payment service to transmit the cost of mailing a QSL card.

The Postal Service hereby adopts the following changes to Mailing Standards of the United States Postal Service, International Mail Manual (IMM), which is incorporated by reference in the Code of Federal Regulations. See 39CFR 20.1.

SARL NEWS - SUNDAY 09 December 2012

You are listening to ZS6SRL, the official radio station of the South African Radio League, the national body for amateur radio in South Africa. The SARL broadcasts a news bulletin every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream, visit www.sarl.org.za, click on 'Amateur Radio Today' and follow the links for details. For audio via Echolink, connect to ZS0JPL-R.

You can download this bulletin and previous ones from www.sarl.org.za and also subscribe there to receive future bulletins by e-mail.

Your newsreader this morning is (name), (call sign), on 145,725 from Pretoria, with relays on 7,066 MHz and 3,695 MHz SSB. (Other news readers change to suit).

SILENT KEY

It is with regret that it must be announced that the key of E I Terblanche, ZR2ET, became silent recently.

We extend our deepest sympathies to the relatives and friends of the deceased.

(PAUSE)

IN THE NEWS TODAY:

THE SARL ANTENNA DEFENCE FUND REACHES 10% OF ITS TARGET

ZS WORKED ALL GRID SQUARES AWARD

TWO EXPERT WORKGROUPS TO BE ESTABLISHED BY THE SARL

DYNACUBE - Denel Dynamics Interns make good progress

You are listening to ZS6SRL. Stay tuned for more details on these and other important and interesting items.

THE SARL ANTENNA DEFENCE FUND REACHES 10% OF ITS TARGET

The SARL Antenna defence fund, launched last weekend, has already reached almost 10% of its R50 000 target. The fund currently stands at R4 800. A list of donors and details on why the SARL has launched the fund and why you should contribute can be found on www.sarl.org.za. Clubs are encouraged to follow the Kempton Park Amateur Radio Technical Society which made a handsome donation the past week. Thanks to KARTS and all radio amateurs who have thus far contributed. Your support for

amateur radio is much appreciated.

TWO EXPERT WORKGROUPS TO BE ESTABLISHED BY THE SARL

At the recent meeting of the Council of the SARL, it was decided to establish two expert workgroups to focus on technical and regulatory issues. The two groups will act in an advisory capacity to the SARL.

The Technology workgroup will focus on new developments; interact with the various SABS technical committees to monitor the development of standards that may impact on amateur radio and keep the amateur radio community abreast of new developments. One of the immediate tasks will be to coordinate the proposed 5 MHz sharing and propagation research project.

The Regulatory workgroup will focus on various regulatory issues such as frequency allocations, environmental and zoning regulations and building standards as well as any other regulations that may impact on amateurs radio.

The two workgroups will meet for the first time by teleconference in early January when the final terms of reference and a work programme will be discussed and finalised. Radio Amateurs with the expertise and/or interest in these or related fields and who are interested in joining one of the workgroups are invited to submit their names, background and contact details to the secretary of the SARL to secretary@sarl.org.za.

ZS WORKED ALL GRID SQUARES AWARD

Congratulations to Pieter Jacobs, ZS6XT, for achieving the top ZS WAGS award for contacting all 83 grid squares in South Africa. So far only Pieter and Pierre, ZS6A (was ZS6BB), have achieved the highest level of this award.

The ZS Worked All Grid Squares (ZS WAGS) award was created in 2008 to encourage local on-air activity, and the award is currently managed by the Sandton Amateur Radio Club.

Over 50 awards have been granted since inception, and so far only two amateurs have reached the maximum of 83 grids. The full rules and current rankings may be obtained on the website of the Sandton ARC at www.zs6stn.org.za.

The objective of the award is to contact as many of the South African grid squares as possible. The "Hunter" award ranges from the entry-level 25 grids up to the maximum of 83 grids, and an award can also be endorsed for specific bands or modes of operation, such as 40 m only, satellite, QRP, etc. The "Activator" award is also granted to amateurs who make themselves available for at least 10 contacts from any of the less-populated grid squares.

CLUB AFFILIATION

The Southern Suburbs Amateur Radio Club, south of Johannesburg, affiliated last week with the SARL. The total number of affiliated clubs are now 31. For a list af affiliated clubs, visit www.sarl.org.za/public/ClubTalk/default.asp.

NEW MEMBER

The SARL welcomes Isak du Plessis, ZSL153, as a new member.

DYNACUBE - Denel Dynamics Interns make good progress

The 2012 Interns from the Denel Dynamics Engineering Academy of Learning have made good progress with their DynaCube Satellite project. The Interns are all engineers who last year graduated from various universities in South Africa and spend a year working on a project before they are assigned to various departments in the company. The 2012 Interns were tasked with designing, manufacturing and commissioning a 1 U Cube Satellite and its associated ground support systems. It was required that the satellite be launched into orbit and perform a relevant space science mission. The launch would be provided by an external launch provider.

The 20 Interns selected to participate in the 2012 programme were divided into three project teams. Each team was tasked with specific outcomes.

Team Ground Zero was responsible for the Ground Control Station as well as communications equipment on-board the satellite.

Team Virtuoso was responsible for the On-board Computer (OBC), the power system, the satellite structure and telemetry data.

It was decided, in the early stages of the project, that a duplicate satellite should be built which will remain on Earth. This satellite would allow the team to perform software maintenance and troubleshooting before the change or update is implemented on the satellite in orbit.

The main tasks of Team Frodo were to specify the satellite payload, the required sensors, the attitude control and the launch of the satellite.

The primary payloads are particle radiation sensors and structural temperature sensors. The radiation sensors will be used to map radiation density and distribution over the South Atlantic Anomaly. This is the area on the Earth's surface where the Van Allen radiation belts are closest to the surface. Numerous satellite hardware failures have been noted over this area.

The secondary payload is a camera capable of taking images and sending them to the OBC for storage. It was decided that a VGA serial JPEG camera would be used, as it would be able to take photographs fast enough to prevent blurring, whilst also doing its own image processing.

The launch will most likely only happen close to the end of 2013 and possibly only as late as the end of 2014. The funding of the launch,

which may be as high as R1 300 000, is a challenge that needs to be overcome.

All systems have been tested and are now ready for integration. Although the Interns have come to the end of their year and will start their careers in various departments of Denel Dynamics, they are dedicated to complete the project in their free time.

Currently three members of the group have obtained their amateur radio license while a few more members of the team are planning to write the May examination.

DynaCube frequencies have been coordinated by the IARU Satellite Advisory Panel to operate on a downlink of 145,980 MHz, an uplink on 435,050 MHz with a tracking beacon on 145,840 MHz.

2013 ARRL HARDCOVER HANDBOOK NOW IN SOUTH AFRICA

A limited number of the ARRL 2013 hardcover handbooks are now available from the South African Amateur Radio Development Trust. A lot has changed since the Handbook was first published in 1926. But just as was said of the ninth edition can be said of this 90th edition: Anyone who is at all interested in the technical side of radio can ill afford to be without The Radio Amateur's Handbook.

New content included in this latest edition includes

. New antenna projects, including a Low-band Quad, Delta Loops, Coaxial Dipoles for VHF or UHF, and a Skeleton Slot for 14-30 MHz . New material on power supply polarity protection circuits . 144 MHz band-pass filter for reducing harmonics . Updated Pebble Crusher QRP transmitter construction project . Design software on CD-ROM, including ElsieT filter and Pi-El matching networks .and more!

The book is available at R740 plus R60 packing and posting. SARL members get a special discount. SARL members pay only R670 plus R60 packing and posting.

CONTEST NEWS

The November leg of the 2012 SARL National Field Day was held on 17 and 18 November and 19 logs were received. The complete results have been published in HF Happenings 534.

The results are:

Class A - Multi Operator, Field Station 1st West Rand ARC, ZS6WR, 136 680 points; 2nd Bloemfontein ARC, ZS4BFN, 97 680 points; 3rd Sasolburg ARC, ZS4SRK, and Pretoria ARC, ZS6PTA, 61 440 points each.

Class B - Multi Operator, QRP 1st East Rand ARC, ZS6ERB, 37 440 points.

Class C - Single Operator, Field Station 1st Peter Henochsberg, ZS1PMH, 13 968 points.

Class D - Single Operator, Field Station, QRP 1st Dirk Els, ZS6AKU, 10 368 points; 2nd Dennis Green, ZS4BS, 3 960 points; 3rd Eddie Leighton, ZS6BNE, 2 700 points.

Class E - General Stations 1st Pieter Jacobs, ZS6XT, 36 660 points; 2nd Pam Momberg, ZS6APT, 4 716 points; 3rd Marius Snyman, ZR6MS, 2 580 points.

Many stations lost points because of duplicate contacts, one log had 17 dupes! Congratulations to the winners.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. In a period leading up to an expected solar maximum, things appear to be more like a solar minimum.

If you want to do your own frequency predictions, the expected effective sunspot number for the week will be around 51.

All the bands from 20 to 10 m will provide lots of DX fun with 15 m providing the best openings with 20 m not far behind. There will also be frequent 10 m openings.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS 31 January 2013 - Last day for submission of nominations for councilors for the next term and motions for the 2013 AGM.

SARL News invites clubs and individuals to submit news items of interest to radio amateurs and short-wave listeners. Submit news items - if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp, not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to Amateur Radio Today every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area, with relays on 7 082, 7 205 and 17 760 kHz. There is also a podcast by ZS6RO. For a web-stream and Echolink by ZS6FCS, visit www.sarl.org.za, click on 'Amateur Radio Today', go down the green column and click on 'LISTEN ON THE WEB'. A repeat transmission can be heard on Mondays at 18:30 UTC on 4 895 kHz ((A new time and frequency!). Reception reports are invited. We are particularly interested in reports of the 4 895 kHz transmission on Mondays at 16:30 UTC as the frequency is close to the proposed new amateur allocation near 5 MHz. Reception reports from all areas in South Africa would be useful in our bid to ICASA for frequencies pilot studies. Send reports to artoday@sarl.org.za.

Sentech sponsors the transmissions on the non-amateur frequencies.

You have listened to a bulletin of the South African Radio League compiled by George Honiball, ZS6NE.

Thank you for listening, 73.

/EX

The Ohio/Penn DX PacketCluster
DX Bulletin No. 1090
BID: $OPDX.1090
December 10, 2012
Editor Tedd Mirgliotta, KB8NW
Provided by BARF80.ORG (Cleveland, Ohio)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AB5K & the AR TelNet Clusters Network, K1XN & GoList, NJ1Q & W1AW, KH2AR/W4, NG3K & ADXO, W3UR & The Daily DX, N4AA & QRZ DX, W5JON, K6VVA, KH6BZF, W6SZN, ND7K, K8GI, K8YSE, W8GEX & 60m News, WA8JOC, AT International, DD0VR, DK8JB & The DX News Letter, DL1SBF, DxCoffee.com, DX-World.Net, ES1CW, F5NQL, F6AJA & Les Nouvelles DX, G7VJR, H44RK, I1JQJ/IK1ADH & 425 DX News, I2MQP & DX Italia News, IW3SQY, LA4LN, OH9MM, OZ6OM & 50 MHz DX News, Pete's DX-Newsdesk, RSGB IOTA Web Site, Sixitalia Weekly, VA3RJ & ICPO and the VHF-DX-Portal (MMMonVHF) for the following DX information.

DXCC COUNTRY/ENTITY REPORT: According to the AR-Cluster Network for the week of Sunday, 2nd-December, through Sunday, 9th-December there were 224 countries active. Countries available: 3A, 3B8, 3D2, 3DA, 3V, 3W, 4J, 4L, 4O, 4S, 4U1I, 4X, 5B, 5H, 5N, 5R, 5T, 5W, 5X, 5Z, 6W, 6Y, 7P, 7X, 8P, 8Q, 8R, 9A, 9H, 9J, 9K, 9M2, 9M6, 9Q, 9V, 9Y, A3, A4, A5, A6, A7, A9, AP, BV, BY, C3, C6, C9, CE, CE0Y, CE9, CM, CN, CP, CT, CT3, CU, CX, CY0, D2, D4, DL, DU, E5/s, E7, EA, EA6, EA8, EA9, EI, EK, EP, ER, ES, ET, EU, EX, EY, EZ, F, FG, FH, FK, FM, FO, FR, FW, FY, G, GD, GI, GJ, GM, GU, GW, H4, HA, HB, HB0, HC, HI, HK, HL, HP, HR, HS, HV, HZ, I, IS, J2, J3, J5, J6, J7, JA, JT, JW, JX, JY, K, KG4, KH0, KH2, KH6, KL, KP2, KP4, LA, LU, LX, LY, LZ, OA, OD, OE, OH, OH0, OK, OM, ON, OX, OY, OZ, P2, P4, PA, PJ2, PJ4, PJ5, PJ7, PY, PY0F, PZ, R1FJ, S5, S7, SM, SP, ST, SU, SV, SV5, SV9, T5, T7, TA, TF, TG, TI, TJ, TK, TN, TR, TT, TU, TY, UA, UA2, UA9, UK, UN, UR, V2, V3, V4, V5, V6, V7, V8, VE, VK, VP2E, VP2V, VP5, VP8, VP8/h, VP9, VR, VU, XE, XU, YA, YB, YI, YL, YN, YO, YS, YU, YV, Z2, Z3, ZA, ZB, ZC4, ZD7, ZD8, ZD9, ZF, ZL, ZL9, ZP, ZS

* PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later" (WFWL).

5W, SAMOA ACTIVITIES (Update/Callsign Confusion).....
* Ralph, H44RK, who was originally expected to be active as 5W0RK or 5W0KR from Apia until March 3rd (2013) from Samoa, has informed OPDX

of the following [edit]: Hi All.... After a crazy week and weekend of packing, getting my licence and moving to Apia, Samoa, I have finally arrived. The good news is that I have my latest and permanent callsign 5W0W. After a lot of to and fro with suffixes 'RK' and 'KR'. So all is good that ends well, so they say, so 5W0W it is and have now set up QRZ.com for that. For those of you who made a contact with me on Sunday's ANZA DX net as 5W0KR.... well it is a valid one, but if you need a QSL card, I will have to disappoint, but I am sure we will make many more contacts with this final call. Thanks to you all for your understanding..... Best 73... Ralph, 5W0W"
Remember, his activity will be on 20-10 meters using SSB and the Digital modes. QSL via NR6M.

* NOW TO REALLY CONFUSE THE SITUATION! Ralph, VK4VB/5H3RK, was active from Samoa during this past week as 5W0RK (You confused yet!). Activity was on 17 meters CW/SSB, but by the time you read this he will probably be QRT. Ralph was there on business, but plans to be active from Samoa twice yearly until 2015. QSL via VK4VB.

AFRICAN ACTIVITY. Starting December 10th, Roger, LA4GHA, who works for the United Nations Office on Drugs and Crime (UNODC) in East Africa, will be active as 5Z4/LA4GHA from Nairobi, Kenya, and from Garowe, Somalia (license not yet issued) for the next two years. Activity will be on 160-10 meters using CW, SSB and the Digital modes, as time permits. QSL via LA4GHA, by the Bureau or direct. Look for more info to be forthcoming.

C6, BAHAMAS (Update/Another Callsign Confusion). Gil, N2GG, was active as C6AGG early in the week from Grand Bahama Island (NA-001). However, on December 4th, Gil's callsign was corrected to C6AEE. Gil states, "I was originally issued C6AGG in error by the Bahama authority. I will respond to any C6AGG QSL requests with a C6AEE QSL." Actually, C6AGG belongs to Carolyn Wardle of Nassau and has had the callsign for 22 years. Gil will be on the island until December 13th. Activity will be holiday style on 80-10 meters using mostly SSB with some CW. QSL via N2GG.

CE0Z, JUAN FERNANDEZ. Several sources are reporting that a team of 10 operators will be active from Robinson Crusoe Island (SA-005) during mid-2013. It was also mentioned that this is the same group who activated D64K earlier this year. Look for more details to be forthcoming.

EC4, SPAIN (On the Birds!). John, K8YSE, reports: "Luis, EC4TR, is looking for North American stations to set up schedules with him. His grid square is IN80er. E-mail him at his QRZ.com E-mail address if you would like to contact him. FO-29 is over 1300km high during morning passes over the Atlantic now. AO-7 is always around 1450km and is in Mode B on odd days during December."

IOTA NEWS.....
EU-171. Michael, 5P1KZX, will be active from Vendsyssel-Thy/Nordjyl-land [aka North Jutland], Denmark, (DIA NJ-001) between December 23rd and January 9th (2013). Activity will be on all HF bands,

mainly using the Digital modes. Michael will try to be active
on the 160m during Christmas. QSL via his home callsign, direct,
by the Bureau, LoTW or eQSL. See details on QRZ.com.

NA-054. You only have a few more days to work Rick, K6VVA, as C6AVA
from Berry Islands (WLOTA 1903). He will be active until
December 11th. Activity will be on 40/30/20/17 meters using
mainly CW with some SSB. NA-054 is needed by 90% of ASIA/JA
IOTA Claimants, 70% in EU and more than 60% in NA. Special
efforts will be made for JA which is a polar path route.
QSL only via N6AWD, direct or by the Bureau. For more infor-
mation and updates, visit: http://www.k6vva.com/iota/na054

SA-022. Members of the Bahia Blanca DX Group (GDXBB) will be active
as L22D from Gama Island between January 24-27th (2013).
Activity will be on CW, SSB and PSK31. Operations will be on
all bands, possibly including the 17/12 meter bands. Look for
more details to be forthcoming. Also, watch the following Web
page at:
http://lu6evd.wordpress.com/2012/12/07/activacion-isla-gama-iota-sa-022

J3, GRENADA. Roy, KE4TG, will once again be active as J38RF from Grenada
(NA-024, WLOTA 0718) between February 6th and March 8th (2013). His primary
interest is the Digital modes (JT-65HF, PSK-31 and RTTY) using a K-3 with a
G5RV and phased vertical antennas. There may be some CW and SSB. Also some
operations on 60 meters. QSL via his home callsign direct (QRZ.com). Logs
will be uploaded to LoTW.

KH6BZF PROPAGATION FORECAST/REPORT (December 10-16th)....
Dec/10th AN Dec/13th AN Dec/15th HN
Dec/11th HN-AN Dec/14th AN Dec/16th HN
Dec/12th AN

VRY DIS - Very Disturbed Severe Storm K�9 100-400

OF3, FINLAND. Operators Marko/OH8KVY, Juha/OH9MM and possible others
will activate the club callsign OF3I this time from the Arctic Circle.
The operation takes place December 13-16th, including the OK DX RTTY
Contest (December 15th). QSL preferably via LoTW.

OJ0, MARKET REEF. A group of Belgian operators will be active as OJ0V
from Market Reef (EU-053, ARLHS MAR-001, WLOTA 0542) between July 1-6th
(2013). Operators mentioned are Jean-Pierre/ON5JT, Michel/ON6QO, Koen/

ON4CCP, Philippe/ON4LEM and Peter/ON8VP. Activity will be on the HF
bands using CW and SSB. QSL via ON8VP.

PT0S, ST. PETER AND ST. PAUL ROCKS. The following URLs will take you to
some pictures (63 pic) and videos on the recent PT0S DXpedition:

CY0AA LOGS (1996). Ken, WA8JOC/CY0AA, reports that "effective 12/6/2012,
all 15000+ QSOs have been uploaded to LoTW. Direct only cards to W8RHM
for both HF and VHF/UHF will be required in the future for QSLs. Paper
QSL cards will be processed with appropriate return envelope and
postage. NO further Bureau cards will be processed. 16 years is long
enough to delay requests for a needed QSL.. Once again, this is ONLY
for the 1996 CY0AA Expedition."

LOG AVAILABLE. The E51E log has been added to the ClubLog Web page.

QSL STATUS OF H44RK, H44USMC and VP2V/AA7V.Rex, NR6M, reports that
currently all QSL requests for H44RK, H44USMC and VP2V/AA7V are being
mailed out the following day.

QSL RECEIVED VIA LoTW: 4O4A, 6Y9X, 8P5A, 9A7A, 9Y4D, AH0/N0AT, C6AKQ, C6AXY, CR3A, D3AA, D4C, DL1YD, DL2MWB, EA8AY, ED1R, EI3KG, EL2LF, FS/K9EL, FY5KE, G3NKC, GM5X, GX6YB, HA8IE, HI3TEJ, HK1NA, HP1WW, HQ2N, J43J, J68HZ, JA1UNLX/VK4, JA7DOT, JH4MGU, JW2US, KH6LC, KP2MM, NP3X, OK2JS, ON5UR, OT5A, P40T, PJ2T, PJ4X, PT6MM, PT0S, PW7T, PY1PL, PY3OZ, PY4PI, RL9F, S58N, SV1CQN, T30PY, T6LG, TF4X, TM6M, TO2A, TT8TT, UT7KF, V26B, V26K, V63JX, VP2V/AA7V, VQ5X, V26E, YY4DNN and ZK2C

QSLS RECEIVED VIA MAIL: 2E0SQL, 2O12L, 3D2GC, 5H1HS, 5H1HS/3, 6Y9X, A31JY, D64K, EA4CYQ, EC4TR, EY0A, EW6DX, KH8/JA2HGY, PJ7I, RI1ANF, T30PY, T30TT, T40C, TI2CLX, UK/UA1ZEY, VK9PN, VU3BPZ/p, W9IMS, XX9THX and Z81D

QSLS RECEIVED VIA THE BUREAU: 4J85W, 4K9W, 4K0CW, 5X7FN, 6W/DL2AWG, A6/DL9WVM, H44WG, HB0/DF7EF, HS0ZGV, MJ/DL3SEM, S9DX, TF/DL3SEM and V55V

RI1, ANTARCTICA. Alex, RD1AV, will once again be active as RI1ANC from the Russian Vostok Base club station in the Antarctica (AN-016, WFF RFF-168) between December 22nd and February 7th (2013). Activity will be on the HF bands. QSL via RN1ON.

S7, SEYCHELLES. Werner, DC8QT, will be active as S79QT from Mahe (AF-024) between December 19th and January 7th (2013). Activity will be on 40-10 meters using SSB, RTTY and PSK31. He will use an IC-7000 with 100 watts into a vertical antenna. QSL via his home callsign, direct or by the Bureau.

T6, AFGHANISTAN. Vyacheslav, RL3AR, will be active as T6T from Kabul until the summer 2014. Activity will be on 80-10 meters using CW, SSB and PSK. QSL via RL3AR, by the Bureau or eQSL.

T8, PALAU. Operators Mike/JA6EGL, Yasu/JA6UBY and Yu/JE6DND will once again be active as T88SM, T88CP, and T88HK, respectively, from Koror Island (OC-009) between January 9-14th. Activity will be 80-10 meters using CW and SSB. QSL via their home callsigns (direct only).

V3, BELIZE. Operators Ron/WB1EAZ and XYL Elaine/KA1UCC will be active as V31RT and V31BE, respectively, from Belize sometime in mid-March 2013. Activity will be a SSB only operation, and they will focus on EU, Oceania and Asia. QSL via WB1EAZ.

V4, ST. KITTS. Jon, W5JON, will be active again as V47JA from his Calypso Bay vacation home, located 300 feet from the Caribbean Sea (CQ Zone:8, IOTA NA-104, Grid FK87pg), between February 20th and March 21st (2013). Activity will be on 160-6 meters SSB, including 60 meters. He plans to operate in the ARRL International DX SSB Contest (March 2-3rd) as a Single-Op/All-Band entry. The station's equipment is a Kenwood TS-590S, Yaesu FT-857D, and SB200 amplifier. Antennas are a 80-10m multi-band dipole, metal roof (called "Galvalume", which the vertical uses as the ground radials) with mounted S9 (18 ft. and 31 ft. verticals) and a 6m 3 element yagi. Also, look for his XYL Cathy, W5HAM, to also be active occasionally as V4/W5HAM. All QSLs go to his home callsign, W5JON. Also LoTW.

XR0, EASTER ISLAND (Update/Dates Changed). A UK DXpedition team will be active as XR0YG from Easter Island (SA-001) between March 20-27th. Operators mentioned are Michael/G7VJR, Nigel/G3TXF, John/G4IRN and Martin G3ZAY. Activity will be on all bands 160-10 meters, mainly CW. Operations will be on the HF bands, but they also plan to work challenging paths on the low bands and with an emphasis on Europe. They will be using Elecraft K3s, small PAs and vertical antennas. Depending on the space available, they will use a beverage or flag for RX on the low bands. ClubLog and LoTW uploads will occur daily. The log search on ClubLog will be available at: https://secure.clublog.org/charts/?c=0YG There will also be OQRS available. QSL via G3TXF and LoTW.

XU, CAMBODIA. Members of the "Foundation for Global Children" (FGC) are now active as XU1A from the "Kingdom of Cambodia" (XU) until December 17th. Activity will be on 160-10 meters (hopefully 6m also) with a focus on 160/80/75 meters using CW, SSB and the Digital modes. They plan to have three stations operating simultaneously using 2x Yagis, DP and GPs. QSL via JH1AJT: P.O. Box 8, Oiso, Naka, Kanagawa 259-0111, Japan (or via JA Bureau). ClubLog and OQRS will be available later.

XV, VIETNAM. Operators Heli/DD0VR and YL Bigi/DE3BWR will be in Vietnam between December 12th and January 4th (2013). Heli informs OPDX that they will start their trip on the 12th from Munich over to Dubai, then Saigon (HCMC) to north Hanoi. Their travels and activities will be as follows:
December 18-20th on Cat Ba Island (AS-132) in the Halong Bay
December 21-22nd in Hue the capital city of Thua Thien - Hue Province
December 22-24th in Danang which is Vietnam's third largest city
December 24-26th in Nha Trang which is a coastal city and capital of Khanh Hoa Province
December 26-28th in Mui Ne which is a coastal resort town in the Binh Thuan Province
December 28-30th in Can Tho the fifth largest city in Vietnam
December 30th-January 2nd on Phu Quoc Island (AS-128) - the largest island in Vietnam.
January 2-4th return to HCMC (Ho Chi Minh City)

The callsign XV0VR was obtained thanks to NguyenBac, XV2A. Activity will be on 20/17/15/12/10 meters operating only QRP CW and QRO/QRP SSB. He mentions that he will make CW QSO (using his G-QRP-Club NR 7073) in the QRP segments with 10 watts and SSB with 500 watts on all other bands if possible depending on the conditions. Heli will use a Elecraft KX3 with a modified Tokyo High Power HL-1.1 (8w in and 500w out) into various antennas. QSL via DD0VR, direct or by the Bureau.

XV, VIETNAM (IOTA Op!). Operators Sei/JA7LU and Hiroo/JA2VWG will be active as XV4LU and XV4DDD, respectively, from Phu Quoc Island (AS-128) between January 12-16th (2013). Activity will be on 40/20/17/15/12/10 meters using SSB and RTTY. See QRZ.com for details on QSL information.

ZL9, CAMPBELL ISLAND (Update). Members of the Hellenic Amateur Radio of Association of Australia (HARAOA) ZL9HR team are now QRT from Campbell Island (OC-037, WFF ZLFF-019) as of about 1600z, December 8th. The report

on their Web page states on Sunday, December 9th, "After a very long final day, the team on Campbell Island finished operations at about 16:00 UTC 8/12/12 - 05:00 9/12/12 Local time and now starts the work of disassembly of the antenna systems, equipment packing and transfer of everything back to the boat before departure back to New Zealand. We wish all the team a safe and calm trip back to New Zealand and then on to their home countries and look forward to the next HARAOA DX'Pedition wherever that may be to." From the log on their Web page, as of 0243z, December 7th, ZL9HR has made a total of 35607 QSOs with 13456 Unique callsigns (22273/CW, 12584/SSB and 700/RTTY). Breakdown by continent is: 239/AF, 0/AN, 4952/AS, 12949/EU, 14586/NA, 1858/OC and 1023/SA. Remember, QSL via EB7DX direct, LoTW or use the OQRS for Bureau and direct requests. YASME FOUNDATION PRESS RELEASE (via Kip, W6SZN):
"The YASME FOUNDATION
PO BOX 20578
Castro Valley, California 94546

FOR IMMEDIATE RELEASE

December 7, 20 12
Temple Hills, Maryland

YASME EXCELLENCE AWARDS AND SUPPORTING GRANTS

The Yasme Excellence Award is awarded to individuals who through their own service, creativity, effort and dedication have made a significant contribution to amateur radio. The contribution may be in recognition of technical, operating or organizational achievement, as all three are necessary for amateur radio to grow and prosper. The Yasme Excellence Award is in the form of a cash grant and an individually-engraved crystal globe.

The Board of Directors of The Yasme Foundation is pleased to announce the award of the Yasme Excellence Award to the following individuals:

- George Fremin, K5TR; Tree Tyree, N6TR; Trey Garlough, N5KO; and Scott Neader, KA9FOX, for their contributions to many infrastructure projects that benefit the ham community at large.

- Mark Spencer, WA8SME, for his instrumental work in the ARRL Teachers Institute and other training efforts, development of PIC microcontroller projects and books for amateurs, and work with leaders in student and scientific teams applying amateur radio to scientific projects and experiments.

- Champ Muangamphun, E21EIC, and Pornchai Semjang, HS2JFW, for leadership in the Thai amateur community, especially during the recent flooding which helped open the door to the new Thai HF licensing and enhanced the stature of amateur radio with the Thai government.

- Tomas Hood, NW7US, and Carl Luetzelschwab, K9LA, for sustained education of the amateur community regarding propagation, solar and geomagnetic physics.

- David Freese, W1HKJ, for creating and maintaining the freeware software package FLDIGI, probably the most widely used digital communication software in ham radio and a frequent gateway for new hams who are more familiar with computer-based communications.

- Dean Straw, N6BV, for his contributions to amateur antenna system design and the development of software tools such as HFTA to optimize system design.

- Peter Martinez, G3PLX, and Pawel Jalocha, SP9VRC, for the development of PSK31, a widely used digital mode entirely invented by amateurs that is enabling many amateurs to successfully use HF with very modest stations.

- Arie Kleingeld, PA3A, Ad Van Ginneken, PA8AD, and Arie, PA3AN, for their sustained contributions to the Mercy Ships Project.

Thank you for your fine work and congratulations to you all!

The Board of Directors also announces supporting grants to the following:

- WRTC 2014 (www.wrtc2014.org)
- World Wide Radio Operators Foundation (www.wwrof.org)
- Club Log (www.clublog.org)
- NCDXF Beacon Project (www.ncdxf.org)
- Yasme Scholarships (administered by ARRL) (www.arrl.org)
- Amateur Radio Association of Kosovo (SHARK)

The Yasme Foundation is a not-for-profit corporation organized to conduct scientific and educational projects related to Amateur Radio, including DXing (long distance communication) and the introduction and promotion of Amateur Radio in developing countries. For additional information about The Yasme Foundation, visit our website at www.yasme.org.

Fred Laun, K3ZO, Vice-President

Irish Radio Transmitters Society
Radio News Bulletin
Sunday 9th December 2012

IRTS 80m Counties Contest 2013.

The date for the 2013 IRTS Winter 80m Counties Contest is Tuesday 1st January. Check the rules at: www.irts.ie/cgi/showrules.cgi?80m Please take note of Rule 4.4 and 4.5 and keep the portion of the band between 3.650 and 3.700 clear. Also note the change in Rule 10.1 which states that entries must be received by the Contest Manager not more than 14 days after the contest.

Coolmine Radio Rally

Coolmine rally will be held at the Coolmine Community School on Sunday 10th February 2013. Doors open at 8.30am for traders and for member of the public at 11.30am. Admission is 5.00. Usual traders will attend and there will be a bring and buy sale. Tea and refreshments available all day during the event. Unlimited free car parking available. To book a table for the rally please call the following: Tom, 01 8211043 or Tony, 087 2439997. Everyone welcome to this excellent annual event.

Limerick Radio Club

The Annual Christmas Quiz will take place on Wednesday 12 December in the Limerick Institute of Technology at 7.30pm and a great night of fun. Fun is guaranteed, so brush up on your radio theory, general knowledge etc. Great prizes are available on the night and all are welcome. The club wishes all members a very Happy Christmas and prosperous 2012.

South Dublin Radio Club Christmas Party 2011

This year's South Dublin Radio Club Christmas Party will take place on Tuesday the 11th of December.

The venue will be the same as last year, "The Morgue," Templeogue Village from 8.00 pm until late.

Members of other clubs and visitors are as usual very welcome to this social event. Limited free food will be available for paid-up members

& visitors can choose from the bar menu until 9.00 pm.

DX News

Norman 5B4AIF will operate from the South Cook Islands from 10 December until 5 January. He will concentrate on SSB and RTTY with perhaps a little CW. The Islands on the Air reference is OC-083 and the QSL manager is EB7DX.

The multi-national DXpedition by 7P8D from Roma in Lesotho closed down on 3 December. Quite a few EI's got into the log. More activity from Lesotho will take place from 17 December onwards when Chris ZS6RI comes on the air as 7P8RI. Chris has been active from Zambia for the past 20 months as 9J2RI. His work now brings him to Lesotho where he will be on a 3 week on / 3 week off rotation. Some of the other exotic calls held by Chris have been ZS8IR (Marion Island), 5H9IR (Tanzania) and ZD9IR (Gough Island).

Gil N2GG has been quite QRV as C6AGG from Grand Bahama. He will be there until 13 December. He operates SSB and CW on all bands 80 - 10m. QSLs go via his home call.

Vlad UA4WHX, the well known DX traveller, who was operating as UK/UA4WHX from Uzbekistan last month has been reported as active again as SU9VB from Egypt. Vlad was on from Egypt in 2011 and again earlier this year.

Items for inclusion in next week's Radio News can be submitted via e-mail to "newsteam /at/ irts / dot / ie" for automatic forwarding to both the radio and printed news services. Urgent news items for the radio news maybe telephoned to the radio news editor, Aidan, EI7JC on 085 7100511.

Please note that items for the radio news should reach the editor no later than midday on Thursday in order to be guaranteed inclusion in the following Sunday's bulletin.

Hams Provide Emergency Communications:

Posted: 09 Dec 2012 04:00 AM PST
http://www.eham.net/articles/29493

Typhoon Bopha (local name Pablo) has hit The Philippines uprooting trees, downing power lines, sparking landslides and making 40,000 people head for shelters. It was the strongest of about 20 typhoons to affect the country this year with its heavy rain and wind gusting up to 210km/h as it came ashore at Mindanao. The Philippine Amateur Radio Association (PARA) had its ham emergency radio operations (HERO) working when the typhoon struck the southern Philippines. PARA is using all available means of communication like HF radio (7.095 MHz) VHF radio (144.740 MHz), the internet and social media (Facebook, email, echolink) to monitor the situation and give updates to all concerned.

//
Space is Calling:

Posted: 08 Dec 2012 01:15 PM PST
http://www.eham.net/articles/29488

Astronaut on the International Space Station answers 20 Kline School students' questions about being in orbit. Students at Kline School in Costa Mesa made an especially long-distance call Thursday, first to northern Italy and then bounced by ham radio to the International Space Station. Twenty students had been prepped and handed scripts with their questions as required by NASA. They were lined up in front of a microphone, waiting in a silent but crowded room on campus.

//
Local Amateur Radio Club Wins Prestigious Award:

Posted: 08 Dec 2012 01:14 PM PST
http://www.eham.net/articles/29487

The Rochdale and District Amateur Radio Society (R.A.D.A.R.S.) fought off other clubs around the UK to win the G5BY trophy for a second time. The President of the Radio Society of Great Britain visited the Norden based club to present the award on Wednesday evening (5 December. As far as we are aware, RADARS is the only club to have been so honoured, as the awards are usually presented at the RSGB AGM. President Dave Wilson congratulated the club on their achievement, and handed the trophy to contest Manager

Bryan Turner, G3RLE, to the applause of the many members present. The contest took place over the weekend of the 7 July in atrocious weather conditions.

//
Retired Detective Is Lifelong Ham:

Posted: 08 Dec 2012 01:11 PM PST
http://www.eham.net/articles/29486

Union area resident Jim Glasscock has binders in his "man cave" that help tell the tales of his life. One binder is filled with newspaper clippings, photographs, commendations and even some cartoons he drew while with the St. Louis Police Department. In another binder are a collection of QSL cards, which are mementos from the people he has met while an amateur radio operator, also known as ham radio.

Attention GB2RS Newsreaders - not for reading out on the air.

You will see from the following script that there will be no GB2RS news on Sundays 23rd and 30th December.

Some news readers may, of course, wish to operate a news net on these days. If so, please ad-lib an

announcement at the end of the first news story.

We thank all news readers for their dedication to the GB2RS News Service and wish you

a very Happy Christmas and a successful New Year.

Gordon L Adams, G3LEQ, GB2RS Manager

Elaine Richards, G4LFM, RadCom Editor

Giles Read, G1MFG, RadCom Technical Editor.

GB2RS NEWS

Sunday 9th December 2012 The news headlines:

* GB2RS News during the holiday season

* Distance learning for the Advanced exam

* Successful contact from Cuba to Spain on FO-29

There will be no GB2RS news readings on 23 or 30 December this year. Normal service will be resumed on Sunday 6 January 2013.

The Bath Based Advanced Distance Learning team are busy enrolling for the next course, which starts in January. The course will run for twenty weeks, aiming for the July exam. The course works by the team e-mailing weekly work packages. Students submit answers to practice questions and other assignments to an e-tutor. Worked answers are provided to those who submit work. There is no charge for the training or the tutor support, but all students pay a deposit which is refunded to those who actively take part in the learning. Those that do not regularly submit work agree to donate their deposit to a radio charity. The pass rate for those completing the course has been over 90% at every sitting so far, so it seems to work. Past students have studied in France, Kenya, Croatia and all over the UK. For more details, please contact Steve Hartley, G0FUW, who is in the RSGB Yearbook, on QRZ.com and can be contacted via email to g0fuw@tiscali.co.uk.

Radio amateurs in Cuba face a number of challenges but recently Hector, CO6CBF, successfully completed a transatlantic contact between Cuba and Spain using the FO-29 amateur radio satellite. You can read more at www.uk.amsat.org/?p=11766.

The MSF 60kHz time and frequency signal broadcast from Anthorn Radio Station will be shut down on Thursday 13 December from 1000 to 1400UTC. The interruption to the transmission is required to allow maintenance work to be carried out in safety. The time signal is used by radio controlled clocks to set the time, so during this maintenance period such clocks may not function correctly.

The address for the Canadian QSL bureau has changed. All QSL cards for Canada should be sent to RAC National Incoming QSL Bureau, Box 51, Saint John, NB E2L 3X1, Canada.

The RSGB will close for the Christmas and New Year holiday at close of business on 21 December. It will re-open at 08.30am on 2 January. Last orders from the RSGB Shop for Christmas delivery will be 11am on 20 December.

Copyright © RSGB 2012. Not for public release before Monday 10 December 2012 except as a GB2RS broadcast. And now for the details of rallies and events for the coming week

The final rally of the year takes place today, 8 December. The South Lancs Winter Rally will be held in the Bickershaw Labour Club, Bickershaw Lane, Bickershaw, Wigan. Doors open at 10am for the public and entry is £1.50. There will be a talk-in station and a Bring & Buy as well as special interest groups. More details from Allan, 2E0RAG on 07533 970 841.

The first rally of the 2013 will be the Red Rose Winter Rally on 13 January in the George H Carnell Leisure Centre.

Now for the news of special events

5G12ITD is on the air until 16 December in Morocco to commemorate UN Day for Tolerance. They will be active all bands and all modes. QSL via RW6HS.

Ian, M0IAA will be operating GB1WH from 11 to 18 December. The station is on the air to raise awareness and funds for Wakefield hospital. Ian is hoping to work as many stations as possible. More details are on QRZ.com.

And now the DX news compiled from 425 DX News and other sources

H44RK will be active as 5W0RK from Samoa between 8 December and 3 March. Operations will be on 10 to 20 metres using SSB and the digital modes. The IOTA reference is OC-097. QSL via NR6M.

W8YCM will be on the air as W8YCM/6Y5 from Jamaica, IOTA NA-097, until the New Year. He's been heard on the 10 to 17m bands using SSB. QSL via his home callsign.

Zorro, JH1AJT will be in Cambodia until 17 December. He will use the callsign XU1A and be on the air on all bands from 10 to 160m using CW and SSB. QSLs go via the JA bureau.

Haru, JA1XGI will be active from the island of Yap in Micronesia, IOTA OC-012, until 12 December. His call is V63XG and he will be on the 6 to 40m bands using CW, SSB and digital. QSL to his home callsign.

Norman, 5B4AIF will be active as E51E from Aitutaki in the South Cook Islands from 10 December to 5 January. The IOTA reference for the island is OC-083. He will operate SSB and RTTY and possibly some QRS CW, on the 6 to 160m bands. QSL via EB7DX and Logbook of the World.

Now the contest news

The 48 hour ARRL 10m Contest finishes at 2359UTC today, 9 December. Everyone works everyone in this CW and Phone event. The ARRL event has numerous entry categories, so please check the rules online to find an appropriate one for you. The exchange is signal report and serial number, although W, VE and XE stations will send their State or Province code too.

Tuesday 11 December sees the 432MHz UK Activity Contest taking place between 2000 and 2230UTC. Using all modes on the 70cm band, the exchange is signal report, serial number and locator.

Copyright © RSGB 2012. Not for public release before Monday 10 December 2012 except as a GB2RS broadcast. And now the solar factual data for the period from Friday the 30th of November to the 6th of December compiled by Neil Clarke, G0CAS on Friday the 7th of December.

Three small new sunspot groups appeared during the period. Solar activity was low and only small occasional C class solar flares took place. These had very little effect on propagation. In total only 9 C class solar flares took place during the period. Solar flux levels declined from 111 units on the 30th to 96 by the 4th and the 5th. The average was 100 units. The 90 day solar flux average on the 6th was 120 units, that's three units down on last week. X-ray flux levels also declined, from B3.4 units on the 30th to B1.2 by the 6th. The average was B1.8 units. Geomagnetic activity was quiet every day, the Ap index on the 5th and the 6th was only one unit. The most disturbed day was the 2nd with an Ap index of 7 units. The average was Ap 3 units. Solar wind data from the ACE spacecraft saw solar wind speeds vary between 290 and 460 kilometres per second. Particle densities were at elevated levels during most days with 23 particles per cubic centimetre on the 30th, 40 on the 2nd and 22 on the 4th. Only the 5th and the 6th were levels below 10 particles per cubic centimetre. As expected with a quiet geomagnetic field, Bz showed only modest fluctuations throughout the period.

And finally the solar forecast for the coming week. This week the active side of the Sun is expected to be rotating into view. Solar activity is expected to be low, with only C class solar flares taking place. There are no indications that activity would increase any higher

than moderate levels on the occasional day. Solar flux levels should increase and be in the 120's for most of the week. Geomagnetic activity should be quiet today but then a small recurring coronal hole is expected for the next couple of days. However, the disturbance is expected to be very weak. Activity should then decline to quiet levels for the remainder of the week. MUFs during daylight hours at equal latitudes should be around 25MHz for the south and 22MHz for the north. Darkness hour lows should be around 8MHz. Paths this week to South America should have a maximum usable frequency with a 50 per cent success rate of around 30MHz. The optimum working frequency with a 90 per cent success rate will be about 24MHz. The best time to try this path will be between 1100 and 1600 hours.

And that's all for this week from the propagation team.

Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies

can be found on the RSGB website, including email addresses

and website links where known.

[Note to Newsreaders: Please read the local news items appropriate to the service area of your transmission.]

NEWS FOR THE MIDLANDS We start with clubs that have several events this week. Wythall Radio Club is holding a club net on 145.225MHz today and next Sunday. On Tuesday there's a Morse class at 1945 and a committee meeting. Friday sees the shack social from 1930. Details from Chris, G0EYO, on 07710 412 819.

Friskney and East Lincolnshire Communications Club is running a club net on Monday from 7pm on 144.165MHz USB, vertical polarisation. On Wednesday there is the Christmas dinner and monthly meeting from 1900, plus the M3+M6 club net on GB3FR. Friday sees a club net on GB3FR. Contact the FELCC Information Line on 07554 362 020 for more information.

South Birmingham Radio Society is making Christmas party arrangements on Monday and Friday. Tuesday sees a coffee morning in the shack from 11am. Details from Mick Cleary, G7RRP, on 07595 696 359.

Lincoln Short-Wave Club is taking part in the 432MHz UK Activity Contest on Tuesday. On Wednesday G6COL is on the air from the shack and there's a brainstorming session at the BSA Club on the subject of digimodes. The simplex club net is on Thursday from 8pm on 145.375MHz and Saturday sees the Surgery in the shack at 9am. For more information contact Pam Rose, G4STO, on 01427 788 356.

On Tuesday 11 December Worcester Radio Amateurs Association is having a talk on datamodes on Tuesday and a Christmas beer & skittles evening on Friday. Details from Rich Moles, M0UVA, via email to secretary@m0zoo.co.uk.

South Kesteven Amateur Radio Society has its last meeting of year on Wednesday, then the Christmas buffet and raffle next Saturday. Contact Nigel, M0CVO, on 01476 402 550.

Now we return to the traditional listing in date order. On Monday Stratford Upon Avon District Radio Society is having a test equipment evening with John, G0JUQ. Contact G0CHO, on 01608 664 488.

On Monday Sutton Coldfield Amateur Radio Society is holding its Christmas party. More information from Robert Bird, by email to spirit.guide@hotmail.co.uk.

On Monday Welland Valley Amateur Radio Society is having its Christmas dinner. For more information contact Peter D Rivers, G4XEX, on 01858 432 105.

On Tuesday Derby & District Amateur Radio Society is holding a committee meeting. Contact Richard Buckby, by email to radio@dadars.org.uk.

On Tuesday Eagle Radio Group is having a review of the year by Gordon, G4WEC. Contact John, M6JMS, on 01754 873 926.

On Tuesday Loughborough & District Amateur Radio Club is having a talk on computer disasters by Andrew, G7SEG. More information from Chris, G1ETZ, on 01509 504 319.

Copyright © RSGB 2012. Not for public release before Monday 10 December 2012 except as a GB2RS broadcast. On Wednesday Midland Amateur Radio Society is holding its Christmas party. Details from Norman, G8BHE, on 07808 078 003.

On Wednesday South Notts Amateur Radio Club is having its Christmas dinner. Contact Robin, G4NDM, on 01159 372 942.

On Wednesday Telford & District Amateur Radio Society is holding its Christmas dinner at Alscott. Contact Mike, G3JKX, on 01952 299 677.

On Thursday Cheltenham Amateur Radio Association is holding its AGM. Details from Derek Thom, G3NKS, on 01242 241 099.

On Friday Bromsgrove & District Amateur Radio Club is holding its Christmas dinner. Contact Chris, M0BQE on 01905 776 869.

On Friday Coventry Amateur Radio Society is having an introduction to its 2013 project. Contact John, G8SEQ, on 07958 777 363.

NEWS FOR THE NORTH OF ENGLAND We start with advance notice that Stars Radio Club is running new Foundation and Intermediate courses in January. For further information, or to join one of the courses,

contact Darren, 2E0MTY, on 07511 968 073.

On Monday Angel of the North Amateur Radio Club s holding its Christmas bazaar and junk sale. Contact Nancy Bone, G7UUR, on 01914 770 036.

On Monday Bolton Wireless Club is having an open evening including a bring & buy sale. For details, send an email to boltonwireless@gmail.com.

On Monday Sheffield Amateur Radio Club is having a talk by Dave Shaw, M5DWI, on his visit to China. More information from Peter Day, G3PHO, by email to sarc@g3pho.org.uk.

On Tuesday Chester & District Radio Society is holding a committee meeting. Contact Bruce Sutherland, M0CVP, on 01244 343 825.

On Tuesday Morecambe Bay Amateur Radio Society is holding a discussion on how members became interested in amateur radio. Contact Sheila, on 07867 516 836.

On Wednesday Denby Dale Radio Club is having a night on the air on 145.575MHz from 1930. Details from Richard, M0RBG, on 07976 220 126.

On Wednesday Hornsea Amateur Radio Club is holding its Christmas party. Contact Gordon MacNaught, G3WOV, on 01377 240 573.

On Wednesday Mid-Cheshire Amateur Radio Society invites members to bring equipment in for repair. Contact Peter Paul Fox, G8HAV, on 01606 553 401.

On Thursday South Manchester Radio and Computer Club is sharing members' QRP experiences, led by Bill, G4NOL. Details from Ron, G3SVW, on 01619 693 999.

Copyright © RSGB 2012. Not for public release before Monday 10 December 2012 except as a GB2RS broadcast.

NEWS FOR NORTHERN IRELAND Mid Ulster Amateur Radio Club is having a tinker and radio night at the shack on Tuesday. On Friday they start the weekend Foundation course. Details from Brian Burns, MI0TGO, by email to muarc.secretary@yahoo.co.uk.

NEWS FOR SCOTLAND On Tuesday 11 December Livingston & District Amateur Radio Society is having an operating evening. Details from Norman, GM1CNH, on 07740 946 192.

On Wednesday 12 December Ayr Amateur Radio Group is having presentation on how our hobby must change. Details from Tom Ferguson, GM1OST, on 01292 532 088.

On Wednesday 12 December Lothians Radio Society is holding its Christmas curry night. Contact Alan J. Masson, GM3PSP, on 0131 623 4580.

On Friday West of Scotland Glasgow ARS are holding their winter social event from 8pm in the upstairs hall at Garnethill Multicultural Centre, Rose Street. Any former members and friends of the club are warmly invited to attend this free event. More information is available by email from info@wosars.org.uk.

NEWS FOR THE SOUTH EAST and EAST ANGLIA We start with advance notice that Dover Amateur Radio Club will be running a PIC training course in January. The course is aimed at beginners. It is free to members, with a small charge for guests. Places are limited so act fast. For more information contact Pete Halloway, M0PKH, via email to peter.halloway@sky.com.

Now for clubs that have several events this week. Chelmsford Amateur Radio Society has its 2m net on GB3DA on Tuesday from 8:30pm. On Wednesday there's a committee meeting at Danbury Village Hall. Contact Martyn, G1EFL, on 01245 469 008.

Horsham Amateur Radio Club is holding a committee meeting on Thursday. Next Saturday there's the last chance to work GB80PW, with an activity day on 7MHz from 10am. Details are on the web at www.harc.org.uk.

On Monday Braintree & District Amateur Radio Society is holding a social evening. For more information contact John, M5AJB, on 01787 460 947.

On Monday Coulsdon Amateur Transmitting Society is holding its AGM. Details from Steve Beal, G3WZK, by email to secretary@catsradio.org.

On Monday West Kent Amateur Radio Society is holding its Christmas social, with a buffet and soft drinks to mark the season. Details from Keith, G4JED, via email to westkentars@googlemail.com.

On Tuesday Brede Steam Amateur Radio Society is at the shack. For more information contact Steve, on 01424 720 815.

On Tuesday Harwell Amateur Radio Society is having a talk on amateur radio astronomy by Brian Coleman, G4NNS. Details from Malcolm, G8NRP, on 01235 524 844.

On Tuesday South Essex Amateur Radio Society is holding its Christmas social evening. Contact Dave, G4UVJ, on 01268 697 978.

On Wednesday Chesham & District Amateur Radio Society is holding its Christmas party at the QTH of Roger, G3MEH. More details from Terry, G0VFW, on 01442 831 491.

Copyright © RSGB 2012. Not for public release before Monday 10 December 2012 except as a GB2RS broadcast. On Wednesday Darenth Valley Radio Society is holding its last meeting of the year, with a quiz evening following by a fish and chip supper. Contact Bob, M0RAW, on 01322 663 804.

On Wednesday East Kent Radio Society is holding its Christmas dinner. Details from Karl Davies, M1DFM, on 01227 710 120.

On Wednesday Harwich Amateur Radio Interest Group is holding its AGM & Christmas party. Details from Kevan, 2E0WMG, on 07766 543 784.

On Wednesday Norfolk Amateur Radio Club is having its Christmas party. Details from Chris Danby, G0DWV, on 01603 898 678.

On Wednesday Southgate Amateur Radio Club is holding its AGM. Contact Mr K Mendum, G8RPA, by email to g8rpa@arrl.net

On Wednesday Surrey Radio Contact Club is having a natter and fix it night. Contact John, G3MCX, on 02086 883 322.

On Wednesday Worthing & District Amateur Radio Club is having its Christmas party. Contact John, G8FMJ, on 01273 593 232.

On Thursday Edgware & District Radio Society is holding its Christmas social. Contact Mike, G4RNW, on 02089 500 658.

On Thursday Huntingdonshire Amateur Radio Society is having a mince pie evening. Details from David Leech G7DIU, on 01480 431 333.

On Thursday Lowestoft & District PYE Amateur Radio Club is holding a cheese and wine evening at the shack. Contact Tim Ward, 2E0TJW, on 07810 481 182.

On Thursday Reading & District Amateur Radio Club is holding its AGM followed by cheese and wine or beer for members. Details from Pete, G8FRC, on 01189 695 697.

On Thursday Sutton & Cheam Radio Society is holding its Christmas junk sale. Note that this is on the 2nd Thursday of the month, for this month only. Details from Darren, M0PRV, on 07525 753 702.

On Thursday Vange Amateur Radio Society is watching a DVD. Contact Steve, G0KVZ, on 01268 552 606.

On Friday Cambridge & District Amateur Radio Club is having a talk on Colossus and code breaking at Bletchley by Martin, G3ZAY. Contact Ron, G3KBR, on 01223 501 712.

On Friday Fort Purbrook Amateur Radio Club is having a natter night at the Fort from 7pm. Contact Neil Hoare, M0NEH, on 02392 378 559.

On Friday Itchen Valley Amateur Radio Club is holding its Christmas social. Details from Liz, M0ACL, on 02380 254 599.

On Friday Loughton & Epping Forest Amateur Radio Society is having its Christmas buffet and bring & buy. Contact Marc Litchman, G0TOC, on 02085 021 645.

On Friday Mid-Sussex Amateur Radio Society is having an operating evening in the shack. Contact Rob, 2E0RJA, on 01444 232 129.

On Friday Radio Society of Harrow is holding its Christmas social. More information from Linda, G7RJL, on 02083 868 586.

On Friday Wimbledon & District Amateur Radio Society is having its Christmas social. Contact Andrew Maish, G4ADM, on 02083 353 434.

Copyright © RSGB 2012. Not for public release before Monday 10 December 2012 except as a GB2RS broadcast.

NEWS FOR THE SOUTH WEST We start with clubs that have several events this week. Exeter Amateur Radio Society is holding its Monday HF net plus a bring in something interesting evening from 7pm at the Moose Centre. The Tuesday 2m net is on 145.575MHz at 7.45pm and on Thursday it's the 4m net on 70.425MHz from 7pm. Contact Nick, 2E0NRJ, on 01363 775 756.

Riviera Amateur Radio Club is holding its Christmas party at club HQ on Monday from 7.30pm. On Wednesday there's the 2m club net from 8pm on 145.425MHz. Contact Alan Wyatt, G2DXU, by email to rivieraarc@gmail.com.

Now we return to the traditional listing in date order. On Monday Appledore & District Amateur Radio Club is holding its Christmas party. Contact Brian Jewell, M0BRB, on 01237 473 251 for more information.

On Tuesday Plymouth RC Plymouth Radio Club is holding its Christmas party. Details from Rob James, 2E0ONO, via email to Robert-james@virginmedia.com.

On Wednesday Thornbury & South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, on 01454 417 048.

On Thursday South Bristol Amateur Radio Club is holding its Christmas social with Muriel, G4YZR. Details from Andrew Jenner, G7KNA, on 07838 695 471.

On Thursday Swindon & District Amateur Radio Club is having a talk by Mike Parkin, G0JMI, from Alton Antenna Arrays. Contact Den, M0ACM, on 07810 317 750.

On Friday Poole Radio Society is holding its Christmas quiz and photo competition. Details from Bill Coombes, G4ERV, by email to secretary@g4prs.org.uk

On Friday Saltash & District Amateur Radio Club is having a mince pies and sherry evening. Contact Brian, M0BHG, on 01752 844 321.

On Friday Torbay Amateur Radio Society is holding its Christmas party and quiz with invited local clubs. For more information contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

NEWS FOR WALES No news items have been received for Wales this week.

I thought that GB2RS newsreaders were required to stick rigidly to the
script provided to them by the RSGB?

The net is not part of the news. The news readers operate the net using
their own call sign as they normally do after the GB2RS broadcast.

```
:Product: Weekly Highlights and Forecasts
:Issued: 2012 Dec 10 1124 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
03 - 09 December 2012

Solar activity reached low levels this week with a total of four
C-class events, the largest of which was a C3 event at 2121 UTC that
came from region 1621 (N16,L=19, clas/area Axx/10 on 07 December.
This region appeared on 24 November as an Alpha class region and
slowly grew in size (to 130 mil), becoming a Beta class region which
it maintained for 8 days. The region began to decay and produced the
C-class event after it crossed the western limb on 07 December.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
normal levels all week.

Geomagnetic field activity was quiet all week. Solar wind speed
measured 260 km/s - 350 km/s on average with a peak of 459 km/s on
04 December due to the arrival of a coronal hole high speed stream.
The maximum southward component of Bz reached -10.9 nT at 04/0440
UTC, the total IMF reached 13.0 nT at 03/1958 UTC. There were no
CMEs with a significant earthward component during this week.

Forecast of Solar and Geomagnetic Activity
10 December - 05 January 2013

Solar activity is expected to be at low levels with a chance of
isolated M-class flares through the entire forecast period (10
December 2012 - 05 January 2013).

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is
expected to be at normal levels except during 14-21 December
following the onset of a coronal hole high speed stream on 14
December and sustained by another stream which is expected to become
geoeffective on 15 December.
```

Geomagnetic field activity is expected to be at quiet levels for the majority of the forecast period. An isolated period of unsettled levels is expected on 17 December with elevated ambient background solar wind speeds and again on 29 December associated with a recurrent solar sector boundary crossing.

Transcontinental 2M Simplex Relay...

Posted: 08 Dec 2012 09:37 AM PST
http://forums.qrz.com/showthread.php?371292-Transcontinental-2M-Simplex-Relay&goto=newpost

I know this is very possible, not quite sure if anyone has tried it before,

but would like to arrange, see who would be interested, and really

seriously do this, regularly... Here locally (EM63) we have a 2M simplex

net on Sunday nights that has setealdily grown to cover most of the state,

we have done this in response to the recent disasters that have plagued

our state, as power failures can knock-out even the best of repeaters, grid

power being what it is, so our little simplex net draws in most of the state

and oters as well, through "remote" net controlers, "Hill Toppers" and

the guy everybody loves with the four thousand element beam....

but I digress, we have discussed doing this on a national level, but
getting enough folks

together without having committees, donations, and a budget is like

pullin' teeth... so if your interested, which if you've read thus far you
are,

get on the air on Sunday night and lets see if we can get this done, don't
let

the naysayers stop you, if we can grow from a little net that covered

Birmingham, to a bigg'un that covers the whole state; you can join us in

this venture...

Call "CQ Simplex Net"

on 146.580 FM

at 10:00 PM CST - 04:00 AM UTC

Come Join us 73's, KI4CLZ

Re-introduction of the DVRPTR_V1 Boards

Posted: 07 Dec 2012 11:07 AM PST
http://forums.qrz.com/showthread.php?371205-Re-introduction-of-the-DVRPTR_V1-Boards&goto=newpost

Re-introduction of the DVRPTR_V1 Boards as a Low Cost Solution for Building Hotspots, Repeaters and Stand-alone Repeaters

Increased demand for a low-cost solution for building hotspots and repeaters, encouraged the re-introduction of the proven DVRPTR_V1 boards as a viable alternative to the existing offering.

These robust and low-cost boards are a great incentive for many hams to start experimenting with the digital modes.

The "new" DVRPTR_V1 boards will be assembled, individually tested and shipped worldwide from Montreal, Canada. Depending on the demand, the boards are expected to be ready for shipping by the end of February 2013.

" As creator of the original DV-RPTR V1 project (name, hardware and firmware) I'm happy that this project will continue..." said Jan Alte, DO1FJN. "This board is not perfect - I know, but it is a reliable, low-price solution for building hotspots, repeaters and stand-alone repeaters. I will resume my firmware development and I hope to find more dedicated specialists that can help improve the board's open source firmware."

Bruce Given, VE2GZI, hardware engineer with over 20 years of experience in the electronic components business, will coordinate the production and logistics efforts of this project.

"My top priority is to promote this great product in the amateur community and to offer it bundled with timely delivery, excellent service and technical support" said Bruce Given, VE2GZI.

http://forums.qrz.com/showthread.php?371376-1937-Ensor-Transmitte
r-Event-Update&goto=newpost

Saturday evening, 12/8/12 we attempted to return the 1937 W9BSP-W9UA AM Transmitter to the air after a 40 year hiatus. We had spent this last week chasing down some final quirks, neutralizing, tuning and generally tweaking. We completed testing Friday and felt that everything was in order.

This evening about 6 PM CDT, a light misting rain developed at the museum. At 7 PM, when we threw power to the wire, we found our SWR had gone off the scale. We then rechecked the antenna system using the station's Icom 751 at 40 watts AM. All Okay. Switching back to the trasmitter the situation had not improved.

Loading the transmitter into a oil cooled dummy load showed that the problem did not reside in the transmitter. A scramble then insued to check each component of the antenna system, bypassing and swapping out cables and the external tuner.

We determined that the 160 meter fullwave loop antenna was not handling the 350 watts PEP of AM carrier. We had checked this antenna previously and had a 1 to 1 match before the rain. At this point we tried our inverted V dipole without success.The dipole had previously shown an issue with the high power of the 1937 transmitter, it had not been improved by the rain.

We then attempted to rematch the loop antenna system to the 1937 W9BSP transmitter at power, so we could proceeed with our Return to Air Event.

A sudden frying egg sound and the snap of an arc in the final tank circuit told us that trying to load the wet antenna directly had failed. Switching

back to the dummy load showed us that we now had developed problems in the transmitter.

The air in the kitchen of the farmhouse that our radio room adjoins now had a distinct ozone tinge. It was decided that we would have to cancel the event for the evening.

We have great confidence that the current problems are correctable and we will be rescheduling our event when we have resolved them. Our primary problem at this time appears to keeping the antenna dry, or locating the weak spots in the antenna system.

I would like to thank all those who came out to the Ensor Museum for the evening, and everyone who participated in the impromptu standby net to hold 3885 for the event.

The W9BSP Ensor AM Transmitter be heard!

73 to all

Annual Bataan Memorial Death March Marathon - 2013

Posted: 08 Dec 2012 08:31 AM PST
http://forums.qrz.com/showthread.php?371290-Annual-Bataan-Memorial-Death-March-Marathon-2013&goto=newpost

The Annual Bataan Death March Marathon will take place at the White Sands Missile Range (WSMR) on March 17th, 2013.

Details of the event can be seen at http://www.bataanmarch.com .

The Mesilla Valley Radio Club (MVRC) will again be operating Special Events Station K5B during the event. K5B will be offering a commemorative QSL card in conjunction with the event. Details about K5B operation and making QSL requests can be reviewed at http://www.n5bl.org/bataan .

For those who aren't familiar with WW II history, the Bataan Death March took place in the Philippines when our troops were forced to surrender to the Japanese. They were subjected to conditions that caused many of them to suffer and die.

The Army has been putting on this event at WSMR to honor the victims and survivors.

Please work us on the event date.

God bless our veterans.

Fred,
WB4AEJ

Hams Ready as Typhoon Hits Twice:

Posted: 10 Dec 2012 04:02 PM PST
http://www.eham.net/articles/29495

The powerful Typhoon Bopha that killed at least 600 people and left many missing in southern Philippines last week, made an unexpected U-turn to hit the northern part of the archipelago. Active during both disasters were the planned ham radio networks, organised through the national IARU society, the Philippines Amateur Radio Association (PARA). When the typhoon was first seen on the weather radar heading for the southern island of Mindanao, PARA was hosting its 80th birthday celebrations in Manila. Almost immediately it asked for the nets to be activated on VHF and for long haul traffic 7095 kHz, echo-link and Facebook. What unfolded was an outstanding effort for the amateur radio community that included evacuations of riverside and low-lying communities and coordination of rescues including those at sea. The networks played an important coordination role in the south with the Disaster Response Team of the Philippine Red Cross, Delta Fire Volunteers, and the Coastguard.

British Astronomer and Broadcaster Sir Patrick Moore Dead at 89

Posted: 10 Dec 2012 11:00 AM PST
http://forums.qrz.com/showthread.php?371557-British-Astronomer-and-Broadcaster-Sir-Patrick-Moore-Dead-at-89&goto=newpost

British astronomer and broadcaster Sir Patrick Moore has died, aged 89.

He "passed away peacefully at 12:25 this afternoon" at his home in Selsey, West Sussex, friends and colleagues said in a statement.

Sir Patrick presented the BBC programme The Sky At Night for over 50 years, making him the longest-running host of the same television show ever.

He wrote dozens of books on astronomy and his research was used by the US and the Russians in their space programmes.

Described by one of his close friends as "fearlessly eccentric", Sir Patrick was notable for his habit of wearing a monocle on screen and his idiosyncratic style.

Continue reading the main story☐Start Quote

Through his regular monthly programmes he was telling us what to look for and what was out there and that was a real inspiration☐Maggie Aderin-PocockSpace scientist

Sky at Night colleague's tributeSky At Night profile of Sir PatrickTributes paid to Sir Patrick Moore

Sir Patrick presented the first edition of The Sky at Night on 24 April 1957. He last appeared in an episode broadcast on Monday.

A statement by his friends and staff said: "After a short spell in hospital last week, it was determined that no further treatment would benefit him, and it was his wish to spend his last days in his own home, Farthings, where he today passed on, in the company of close friends and carers and his cat Ptolemy.

"Over the past few years, Patrick, an inspiration to generations of astronomers, fought his way back from many serious spells of illness and continued to work and write at a great rate, but this time his body was too weak to overcome the infection which set in, a few weeks ago.

"He was able to perform on his world record-holding TV programme The Sky at Night right up until the most recent episode .

"His executors and close friends plan to fulfil his wishes for a quiet ceremony of interment, but a farewell event is planned for what would have been Patrick's 90th birthday in March 2013."

'Father figure'Patrick Alfred Caldwell-Moore was born at Pinner, Middlesex on 4 Mar 1923.

Heart problems meant he spent much of his childhood being educated at home and he became an avid reader. His mother gave him a copy of GF Chambers' book, The Story of the Solar System, and this sparked his lifelong passion for astronomy.

Continue reading the main storyAnalysisDavid ShukmanScience editor, BBC News

Sir Patrick Moore was the voice of the space age.

I recall as a child not following every detail of that famously rapid patter but I never minded - because like everyone who watched his broadcasts I was swept along by his extraordinary energy and excitement.

Here was someone who could catch the mood of a world enthralled by a heady mix of discovery and achievement.

With rockets launching satellites and then astronauts above Earth and beyond, there was no greater enthusiast to chronicle and illuminate an exhilarating new era of exploration.

Generations grew up with Patrick Moore as their guide and he proved hugely influential. Astronomy was no longer a niche activity.

The man with the monocle had touched people who had never even thought of stargazing.

Read more from David

When war came he turned down a place at Cambridge and lied about his age to join the RAF, serving as a navigator with Bomber Command and rising to the rank of Flight Lieutenant.

But the war brought him a personal tragedy after his fiancee, Lorna, was killed when an ambulance she was driving was hit by a bomb. He never married.

Sir Patrick, who had a pacemaker fitted in 2006 and received a knighthood in 2001, won a Bafta for services to television and was a honorary fellow of the Royal Society.

He was a member of the UK Independence party and, briefly, the finance minister for the Monster Raving Loony Party, and attracted some controversy for his outspoken views on Europeand immigration.

Fellow scientists speak of how Sir Patrick inspired a generation

His other TV credits include the role of Gamesmaster in the 1990s computer games show of the same name.

BBC science correspondent Pallab Ghosh said Sir Patrick's appearance sometimes aroused as much comment as his astronomy: "He was six-foot-three, and was once described as having 'an air of donnish dishevelment', with his raised eyebrow, scarcely-brushed hair and poorly-fitting suits.

"His enthusiasm was unstoppable, and on occasions he would talk at 300 words a minute."

Queen guitarist Brian May, who published a book on astronomy written with Sir Patrick, described him as a "dear friend, and a kind of father figure to me".

He said: "Patrick will be mourned by the many to whom he was a caring uncle, and by all who loved the delightful wit and clarity of his writings, or enjoyed his fearlessly eccentric persona in public life.

"Patrick is irreplaceable. There will never be another Patrick Moore. But we were lucky enough to get one."

Television presenter and physicist Professor Brian Cox posted a message on Twitter saying: "Very sad news about Sir Patrick. Helped inspire my love of astronomy. I will miss him!"

The acting director general of the BBC, Tim Davie, said his achievements at the corporation "were unmatched", adding that Sir Patrick will be missed by his "countless fans".

UKIP leader Nigel Farage said: "Since I first met Sir Patrick when he dominated a UKIP stage in 1999, he has been a friend and an inspiration - not only to us in UKIP, but across the country and around the world. Today we have seen the passing of a true great, and a true Englishman."

Ham Radio Now Episode 32, Part 3 The hidden TWit Tour

Posted: 26 Nov 2012 09:07 AM PST
http://forums.qrz.com/showthread.php?369819-Ham-Radio-Now-Episode-32-Part-3-The-hidden-TWit-Tour&goto=newpost

It's at http://youtu.be/igmTmnX5PWw

Don't know what Ham Radio Now is.

Gary Peirce is a Ham Radio operator who has a podcast called Ham Radio Now. Formally know as Amateur Radio Video News or ARVN, Gary and his cohosts take us behind the scenes at ham radio events, interview those making news in the hobby and tell us about things we may not have known about ham radio. In episode 32 Gary takes us on a video vacation of a recent trip to Atlanta (part 1). Then (in part 2) he goes to California and gets a tour of the TWiT studios and talks with Leo Laporte. If you are a fan of Ham Nation or any of the other programs which air on TWiT you will enjoy that one. Here, in part 3, Gary shows us some extra footage of his

TWiT tour.

If you are a Ham (and you probably are if you are reading this) or interested in Ham Radio (about to get into the hobby?) you should check out his other videos. Just look for HamRadioNow on Youtube or just click here - http://www.youtube.com/user/HamRadio...ow=grid&view=0

Attention all CW DXers, Contesters & Budding DXpeditionists

http://forums.qrz.com/showthread.php?369650-Attention-all-CW-DXers-Contesters-amp-Budding-DXpeditionists&goto=newpost

This is absolutely the best FREE CW pileup training program ever released.

Web Site Here

Strap yourself in as you are transported to your own one man CW DXpedition to North Korea (or North Dakota), your fellow CW enthusiasts are counting on you. :)

Seriously though, Alex, VE3NEA has done an outstanding job with this free program called PileupRunner. Practice with it for 15 - 30 minutes a day for a few weeks and your CW pileup & contesting skills will improve dramatically. Augment PileupRunner with the wonderful German written program RufzXP and MorseRunner for the trifecta of all CW contesting "simulators".....All programs are 100% free.

PileupRunner is as close to the real experience as one can get without going to an exotic land. 'Da Cow here rates it a full 5 bellowing moo's!!! The program is intuitive as to how the pileup is generated & I would recommend reading it's short 3 - 4 page manual before getting started. You will wonder why stations you have already worked keep on calling you if you don't.

I have no monitory interest in anything Alex does & have never meet him.

See ya in the pileups,

Tom KCØW

Superstition Hamfest Mesa, AZ, RESCHEDULED Feb 9, 2013

Posted: 27 Nov 2012 11:31 PM PST
http://forums.qrz.com/showthread.php?370004-Superstition-Hamfest-Mesa-AZ-RESCHEDULED-Feb-9-2013&goto=newpost

SEE UPDATE BELOW THIS POST

Mesa, AZ

SUPERSTITION HAMFEST DELAYED. TO BE RESCHEDULED FOR EARLY 2013.

Superstition Hamfest, set to run on Saturday, December 1, got pushed back due to

some paperwork timing issues. The issue arose on the Monday before the scheduled

event, we were unable to resolve it and keep the scheduled date in play by Tuesday.

It is therefore DELAYED (not "canceled") till a later date in early 2013.

Main Prize drawing tickets already sold will be good toward the same drawing

at Noon of the new date in early 2013 for the Hamfest.

We need to shoot for some time about 60 days out and fit around existing

Hamfests already on the schedule.

January has a hamfest in the west valley by Thunderbird ARC,

and March has one by Scottsdale ARC in the near-east valley,

so we need to fit our delayed 2012 hamfest in around these events.

Superstition ARC will plan its regular December 2013 Hamfest to be held as it

has in the past, on the first Saturday of December, in addition to the delayed 2012 event.

We apologize for the inconvenience to our vendors and attendees.

Please see http://wb7tjd.org/hamfest/ for the latest news.

FITSAT-1 LEDs to Flash Morse Code Over USA and Europe:

Posted: 11 Dec 2012 11:56 PM PST
http://www.eham.net/articles/29498

On December 12-13 FITSAT-1 will be using its optical LED beacon to flash a message in Morse Code over the USA and the British Isles/Europe which should be visible using binoculars. The FITSAT-1 CubeSat was developed by students at the Fukuoka Institute of Technology (FIT) in Japan. As well as the optical LED experiment the satellite carries several amateur radio payloads: a CW beacon on 437.250 MHz, a telemetry beacon on 437.445 MHz and a high-speed data downlink on 5840.0 MHz. The LEDs were successfully tested on November 26 and it had been planned to flash the LEDs on Christmas Eve, however, the FITSAT-1 website reports that there will be a Full Moon that night which would make the signals impossible to see. The plan is now to activate the LEDs on
- December 12, 6:14:30 GMT over the United States for 2 minutes - December 13, 22:10:30 GMT over Europe for 2 minutes or possibly 4 minutes if tests on December 11 over Japan are successful.

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

7P, LESOTHO
Similar to his 9J2RI activity Chris,ZS6RI (ex 9J2RI), will show up on
the bands every two weeks signing 7P8RI in CW, SSB and digital modes
on HF starting from Dec 17. QSL direct (QRZ.com), LoTW.
See also: http://zs6ri.blogspot.co.uk

S7, SEYCHELLES
Tom,DL5NEN, and his XYL Claudia,DO5NEN, will be QRV again from La Digue
from Dec 15-28 using the same callsign S79NEN like on their honeymoon
in March. QSL via DO5NEN.

C6, BAHAMAS
C6AEE is the new callsign of Gil,N2GG, since Dec 4. All QSOs with
C6AGG (issued in error by the Bahama authority) will be confirmed with
a C6AEE QSL. QSL via N2GG.

DU, PHILIPPINES, OC-130
Max,DU9/M0GHQ, is working holiday style from Mindanao (OC-130) until
Jan 18. He also plans to visit Simon,DU9AQQ, on Samal Island (OC-235)
during this time. QSL via homecall.

I, ITALY
The special callsign II1M will be activated by ARI Chivasso (IQ1GJ)
from Dec 14-16 to celebrate the 110th anniversary of the first trans-
atlantic radio contact between Glace Bay in Canada and Poldhu in
Great Britain. The phases of this historic event will be reconstructed
on Dec 15 around 1400 UTC by VO1AAA and GB2GM with the participation
of Princess Elettra Marconi in Rome. QSL via IQ1GJ.
See: http://digilander.libero.it/arichivasso or http://www.gb2gm.org.uk
---
The Christmas special event station II0XMAS is active till Jan 1, 2013.
Antonello,IZ0VHY, is responsible and wishes everybody a Merry Christmas
and a Happy New Year. QSL via M0OXO. See: http://www.m0oxo.com/oqrs

OH, FINLAND
Though there is still no separate DXCC "North Pole" Santa Claus lives
in cold and harsh conditions under the northern lights in the region
of Santa Claus in Lapland in northern Finland. The frozen HAMs
Martti,OH2BH, Rami,OH3BHL, Juha,OH8NC, Kimmo,OH9MDV, and Aaro,OH9RJ,
are on the air as OH9SCL (QSL via OH9AB) and OF9X (QSL via OH2BH) from
Muonio. If you work both stations you can apply for a certificate via
e-mail (of9x@sral.fi). This certificate can be issued also in the name
of children or grandchildren. A discount will be granted during a visit
in the coming year.

---
Marko,OH8KVY, Juha,OH9MM, and possible others will activate the club
call OF3I from the Arctic Circle from Dec 13-16. They plan to take part
also in the OK DX RTTY Contest (Dec 15). QSL via LoTW preferred.

PA, THE NETHERLANDS
The Christmas special event stations (PA12XMAS, PB12XMAS and PD12XMAS)
are activated for the 4th time in a row until Jan 1, 2013, with focus
in SSB on 10m-12m. QSL via PB5X. See: http://www.CQfriends.com/pb12xmas

VP8/A, ANTARCTICA
Alex,RD1AV, is member of the summer team at Vostok base and will be
QRV as RI1ANC during his spare time between Dec 22 and Feb 17, 2013.
QSL via RN1ON.

YA, AFGHANISTAN
Vyacheslav,RL3AR, is signing T6T in CW/SSB/PSK on 80m-10m from Kabul
until summer 2014. QSL via RL3AR.

African Activity: Roger,LA4GHA, is working for the "United Nations Office on
Drugs and Crime" (UNODC) in East Africa for the next two years and will
be active as 5Z4/LA4GHA from Nairobi/Kenya and from Garowe/Somalia
(license not yet issued) during his spare time. Activity will be on
160m-10m in CW, SSB and digital modes. QSL via LA4GHA.

DX Marathon: The "CQ Magazine" invites to its annual "DX Marathon" again.
We need to work as many countries and areas within one calendar year.
No QSLs needed. See also: http://www.dxmarathon.com

LINKS: Current SOTA activities (mountain summits) are announced at:
http://www.sotawatch.org

Detailed information about current VHF activities can be found on the
VHF DX portal "Make More Miles on VHF" at: http://www.MMMonVHF.de

UPCOMING CONTESTS

Dec 15 OK DX RTTY Contest
Dec 15/16 Croatian CW Contest
Dec 16 RTC Party
Dec 16 QRP-ARCI Holiday Spirits Homebrew Sprint

The Radio Club of the Directorate General of Civil Aviation (CE3RAC) invites
all amateur radio operators to participate in the "Dia de la Aeronautica
Bases Concurso Nacional" on the third weekend of December.
See: http://www.ce3rac.cl/index.php?option=com_content&view=article&id=173

IOTA compiled by Klaus, DL7UXG (e-mail: iota@dxhf.darc.de)

Island activities:
AF-024, S7, Inner Islands: Werner,DC8QT, will visit Mahe (WLOTA 3286,
Loc LI75SH) from Dec 18 until Jan 7. He will work holiday style as
S79QT in SSB, RTTY and PSK31 on 40m-10m. QSL via DC8QT.

AS-128, 3W, Gulf of Thailand group/AS-132, 3W, Gulf of Tongking North group:
Heli,DD0VR, and Bigi,DE3BWR, are going to visit Vietnam from Dec 12
until Jan 4. They will sign XV0VR in SSB and CW on 20m-10m from
different places like Cat Ba Island (AS-132) from Dec 18-20 and
from Phu Quoc Island (AS-128, WLOTA 2523) from Dec 30 until Jan 2.
QSL via DD0VR (bureau/direct).

NA-099, KP4, Puerto Rico: David,K3LP/KP4, makes a "Caribbean Island Tour"
during the second half of December. His first stop will be San Juan
on Puerto Rico (USi PR006S, WLOTA 2802). He wants to work holiday style
from Dec 18-22. More information about other stops will follow in the
next DX Newsletter. QSL via K3LP. See also: http://www.k3lp.com

OC-097, 5W, Samoa Island: In DXNL 1809 we have written about the activity
by Ralph,H44RK. Ralph is active since Dec 3 and uses the callsign
5W0W (not 5W0RK or 5W0KR). QSL via NR6M.

OC-151, YB9, Tenggara Timur Islands: Leo,YC9MLL, will be active from
Maumere on Flores Island (Loc PI11ci) from Dec 15 until Jan 15 using
a homebrew radio (50-100 Watt)in CW, SSB, PSK31, RTTY and SSTV
on 40m/20m/15m/10m. QSL direct or via DW1OXL (d) and eQSL.

General information IOTA: IOTA Charges are increasing on Jan 1, 2013.
See: http://www.rsgbiota.org/info/directory/charges-en.pdf and
http://www.rsgbiota.org

ILLW 2013: The next "International Lighthouse and Lightship Weekend" will
take place on Aug 17/18. Until now there have been 100 announcements
already. See also: http://www.illw.net

WIANEWS WEEK COMMENCING DECEMBER 16 2012.

Wyong Mini-Contest-University

Masthead TV devices and electric fences

EMDRC Christmas Foundation Course

THESE STORIES AND MORE IN THIS EDITION OF NEWS FROM THE WIRELESS INSTITUTE
OF AUSTRALIA FOR WEEK COMMENCING DEC 16 2012.

Wyong Mini-Contest-University - February 23rd. 2013 at Wyong.

Trent VK4TS, WIA Director for Awards and Contests is locked in as keynote
speaker to introduce the day. As well as material from the Dayton Contest
University, kindly supplied by Tim K3LR, some local content has been offered
to be presented by members of the VKCC group.

One aim of the "MCU" is to help people understand what contesting is all about.
It's hoped that people who are sitting on the contest sidelines, not knowing
how to move forward can gain from attending this (free) event.

As well as the educational content it is hoped that the networking component
the chance to meet the people you have heard (or heard of) will also form a
major part of the day. The day will run from 10 am to 4pm on Saturday 23rd.

February with an hour break for lunch and if there is sufficient interest extend to a get together and meal in the evening at a local pub or restaurant joining up with others coming to the Field day on the Sunday.

Information and details on how to register can be found under the mini contest university link in the sidebar of www.fieldday.org.au or directly from the link on the Dayton Contest University page at www.contestuniversity.com

(Ed VK2JI)

Masthead TV devices and electric fences

The Australian Communications and Media Authority has a masthead and distribution amplifier fact sheet, and a media article on electrically powered fences - both which can cause interference.

In marginal TV reception areas it is finding faulty, due to age or misuse, mastehead amplifiers that radiate a signal affecting TV viewing, mobile phones, two-way radios and heard on the amateur radio bands.

ACMA field officers have found them either overloaded to distortion, internally mixing a multitude of high level signals, or going into self-oscillation.

Distribution amplifiers are also designed to feed a number of TV sets from a single antenna, but never to oscillate and become an unintended radiator.

Meantime, the ACMA in the Hoofbeats magazine read mainly by horse owners, warns then about the interference that may be caused by faulty electric fences.

The fact sheet and article give helpful installation and operational advice, to avoid fines the ACMA may issue if it enforces the Radiocommunications Act.

(Jim Linton VK3PC)

Proposed changes to radio service in Darwin and Katherine

The Australian Communications and Media Authority is seeking public comment on proposed changes to improve and add radio services in the Darwin and Katherine area.

The ACMA is proposing to amend the Licence Area Plan - Darwin Radio to: formalise the operation of 8PNN Darwin and Katherine and 8HOT and 8MIX Adelaide River improve the operation of the Darwin radio broadcasting services 8ABCFM, 8DDD, 8JJJ, 8PNN, 8SBSFM, 8HOT & 8MIX, 8GGG, 8KNB & 8TOP and the Katherine radio broadcasting service 8KTR make a frequency available for a new community radio service to be provided in Darwin.

The proposed changes are contained in the Draft Variation to Licence Area Plan - Darwin Radio - No. 2 of 2012 and discussed in accompanying explanatory paper.

The documents are available on the ACMA's website or by calling 1300 850 115.

The closing date for comments on the proposals is 5pm Friday 11 January 2013.

WIA BOARD TALK

President Phil Wait VK2ASD vk2asd@wia.org.au
Vice President Chris Platt VK5CP vk5cp@wia.org.au
Secretary David Williams VK3RU vk3ru@wia.org.au
Treasurer John Longayroux VK3PZ vk3pz@wia.org.au

Have you prepared for the last weekend in May; the 2013 WIA AGM and Conference?

Hosted in the Maritime Hub of Fremantle in Western Australia, the 2013 Conference in May offers you the best in Amateur Radio, with seminars, workshops and social activities for Amateur Radio enthusiasts and their partners. Hosted by Western Australian Amateur Radio Clubs and held at the Tradewinds Hotel in Fremantle, it's going to be your event. Why should you make the trip across the globe to Western Australia to visit the most isolated capital city in the world? Find out!

The 2013 WIA AGM and Conference, it's all about Engaging, Learning, Appreciating, Socializing and Discovering.

You'll find all the information online at the VK6 conference site, conference.vk6.net

EMDRC Christmas Foundation Course

For those folk who have heard about Amateur Radio and would like to get involved in the hobby and get on the air with a Foundation Licence, and who may be looking for something to do in the few days between Christmas and New year, then have we a deal for you !
The Eastern and Mountain District Radio Club will once again be running its special Christmas Foundation course.
The course will be run on Thursday the 27th of December with the assessments taking place on the morning of Friday the 28th of December

The course will be held at our EMDRC Clubrooms located at 13a McCubbin Street Burwood, for those not familiar with the area, its location is very close to the RSPCA on Burwood Highway, ideal if you plan on coming by public transport. If you are coming by car, there is plenty of parking available onsite.
To arrive at the clubrooms, simply drive west down McCubbin street and look for the lane way on your left hand side, you will find the clubrooms (Scout Hall) at the bottom of

the lane way.

The course instructors will be myself Robert Broomhead
VK3DN and Damian Ayers VK3KQ.
The Sunday morning the assessments will be run by myself
with Keith VK3FT and assistance from other assessors..

Further details on the EMDRC club website http://www.emdrc.com.au

Cairns Region VHF Repeater back on air

The VK4RCA Cairns 2 metre voice repeater has finally planted its feet yet
again.

After being retrieved from the Mount Yarrabah site and many months of
refurbishment and reliability testing on the workbench the repeater equipment
has received the tick of approval and has just been installed at the
Mount Haren repeater site, up on the range behind Kuranda.

With 13 Watts to the antenna and a 6 dB antenna to boot, the repeater should
have good coverage across the Atherton Tableland region plus good access
from Cairns and the Northern Beaches.

Access and reception reports are requested
secretary@carc.org.au

VK7RCH Antenna Upgrade

The old repeater antenna from VK7RTC - Mt.Nelson has been removed to
reinstall at Grey Mountain at the next possible chance.

This involved careful manoeuvring on top of the tower in windy conditions and
a difficult removal of the antenna from its mast clamp.

The mast had to be cut at the bottom near the plate, and the stays unbolted.

The whole assembly had to be lowered down onto the top of the tower, while
taking care with the weight of the mast - an estimated 50 plus kilos!

A new blog has also been started to check out the status of the repeater
and other associated projects.

The web address is in the email addition of this broadcast.

OPERATIONAL NEWS - DATELINE 2012-13

AMSAT Straight Key Night on OSCAR 2013

You are invited to participate in Straight Key Night on OSCAR 2013.

This year's AMSAT event is dedicated to the memory of John Thompson, W1BIH/PJ9JT, who passed away this year aged 96.

Although known primarily as an HF DXer and contester, John was also active on OSCAR, mostly on CW.

As always, S.K.N. on OSCAR is simple and informal.

Just operate CW through one or more satellites on 1 January 2013 (0000 to 2400 UTC), using a straight hand key.

There is no need to send in a log, but all participants are encouraged to nominate someone they worked for Best Fist.

Your nominee need not have the best fist of anyone you heard, only of those you worked.

Send your nomination to w2rs@amsat.org

8J6HAM - celebrating the 12th West Japan Ham Fair on AS-077 Kyushu
10 Dec to 3 Mar

8N119T - celebrating the 65th anniversary of the Tokyo Fire Department
(119 is the emergency fire/ambulance number in Japan)
23 Dec to 25 Mar active on all HF bands and modes.

DISCUSSION POINT

What use is an f-call?

I'm about to go on a couple of trips and thought that it might be a good idea to have a radio with me, if nothing else, a great opportunity to talk to some locals on their local repeater.

I have a portable kit, that is a Yaesu 857d with 2 x 26Ah batteries which goes forever using 10 Watts. My back of napkin calculation says that on 2m I can transmit continuously for over 12 hours with that - more realistically, if I transmit 10 minutes out of every hour, over 40 hours, though I've never

tested it and likely the numbers will be different for HF using SSB with my Antenna Tuner plugged in.

This amazing battery life comes at a cost, namely size and weight. The batteries fit in a medium size tool-box, and each battery uses more than 8kg from my luggage allowance, so, if I was keen, I could stick my radio and 16 kg of battery in my suitcase and take my toothbrush but I'm pretty sure my hosts would prefer I packed some clean clothes as well.

I've been shopping around for a hand-held and I know that for $100 bucks or so I could select from any number of cheap hand-helds which for some reason that I'm yet to determine the Amateur Radio fraternity appears to refer to as Handy Talkies, rather than Walkie Talkies. The closest I can come is that a HT, or Handheld Transceiver once got explained by a Walkie Talkie User as a Handy Talkie and it stuck, but I don't know; what's in a name?

Anyway, I'd like to be able to use the same accessories I already have, like the nice remote microphone that cost more than the hand-held I can get, my battery charger, the mount I already have in my car, etc.

A friendly HAM had loaned me a hand-held radio for a previous journey and I'm borrowing another one this weekend from another HAM - which is a fantastic way to try before you buy - but I'm not yet convinced.

I've begun to investigate solving the problem in another way. Pack my current radio into a satchel, add a small lithium ion battery of some description and I've got my "normal" radio with me when I travel. I don't yet know if that's going to work - for example, I've not yet figured out how to deal with the antenna, since the radio isn't really designed for sitting on its tail with an antenna hanging out, but perhaps I can set it on a flat surface and poke a multi-band antenna out the back.

I won't be able to attach it to my belt and at this time that's not a great concern.

Ironically, when I started, I skipped the hand-held option and my go-kit has gotten larger and heavier every time I find another essential tool. I think I might need to make two go-kits, one mobile and one portable - hi hi.

It seems that even if you bought yourself your ultimate radio, your needs change.

I'm Onno VK6FLAB

INTERNATIONAL NEWS With thanks to IARU, RSGB, SARL, Southgate AR Club, ARRL, Amateur Radio Newsline, NZART, ARVictoria and the WW sources of the WIA.

ZL Amateur Access to 600 Metres

The band 472 kHz to 479 kHz was allocated to the Amateur service for use on a secondary basis at the World Radiocommunication Conference held earlier this year.

New Zealand Amateurs will be given access to this band with the Radio Spectrum Policy and Planning Group of the Ministry of Business, Innovation & Employment:

Type of allocation: Secondary
Power Output : 25 W eirp
No Bandwidth restrictions:

As a result of this new ZL allocation, Amateurs will no longer have access to the previous temporary allocation at 505 - 515 kHz. The Ministry has, however, agreed that the temporary use in the band 505 kHz to 515 kHz will be permitted for one further year, until the end of 2013, to provide amateurs with an opportunity to retune and/or rebuild their equipment.

BIRD MEN OF SAN QUENTIN

NBC News reports in the USA that inmates at San Quentin prison are building CubeSat orbital deployers.

P-PODs, Poly Picosatellite Orbital Deployers are aluminium boxes designed to hold tiny satellites known as CubeSats, which ride "piggyback" into space as secondary payloads

Watch the NBC video at

Foreign licensees in South Korea

When applying for a South Korean license foreign amateurs may choose between a Korean callsign or HL*/homecall.

The callsign blocks range from HL1Z** to HL1Z** and the number depends on the location in Korea.

The foreign language repeater in Seoul was moved on top of a 600m high mountain: RX 439.6 MHz, TX 434.6 MHz with 123 Hz subtone.

Interestingly, any language OTHER than Korean is allowed on this repeater.

==========

NEWS FROM ARNEWSLINE USA

TAIWAN RADIO HAMS SEEK ADDITIONAL ALLOCATIONS

Hams in Taiwan say that they are in need of
additional operating spectrum and have prepared a
report that explains what, where and why.
Amateur Radio Newsline's Jim Meachen, ZL2BHF, has the details:

--

Taiwan's national society the CTARL, presented a
paper regarding amateur radio in that country at
the recent IARU Region 3 conference. In it the
Taiwanese ham radio community says that it is
seeking to expand several amateur allocations.

On 80 meters where they currently only have 3.5
to 3.5125 and 3.55 to 3.5625 MHz, they are
seeking an allocation from 3.5 to 3.9 MHz. On 6
meters they have just 50 to 50.0125 and 50.11 to
50.1225 MHz. As such they are seeking the entire
50.0 to 54.0 MHz band and to add 146 to 148 MHz
to their existing 144 to 146 MHz allocation.

Taiwan has very limited amateur allocations in
the UHF and Microwave bands, only 430 to 432,
1260 to 1265 and 2440 to 2450 MHz. There they
seek to expand these allocations to from 430 to 440
and 1240 to 1300 MHz.

Of interest, the CTARL reports that its
membership is now just 362. In 2000 the IARU
reported it had a membership of 1264 out of an
amateur population of 24,324. This indicates
that they have lost 72% of their members this
century and one can speculate that perhaps the
number of radio amateurs in that nation has had a similar sharp decline.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF,
in Nelson. New Zealand.

ZONECASTING TO BE TRIED ON THE FM BAND IF FCC SAYS OK

Something new may soon be coming to the FM
broadcast band in the United States. This if a
proposed system called ZoneCasting proves out its proposed technology.

ZoneCasting is the result of research and
development by a company known as Geo-Broadcast
Solutions. It proposes to use a series of
booster transmitters to give FM radio stations
the ability to divide their coverage areas into
geographic zones and "geo-target" their
advertising and programming. Geo-Broadcast
Solutions says its ZoneCasting system uses GPS
and mobile broadband technologies to slice up the
FM signal but avoid interference via a
single-frequency network made up of FM boosters.

To allow the system to work, the company has
asked the FCC to modify its current rule that
prohibits booster stations from originating
programming. A booster operates on the same
frequency as an FM station's main channel and is
used to improve signal within the station's coverage contour.

The company and Harris are partnering on the
first commercial test, which is expected to
launch early next year at WRMF-FM in Palm Beach,
Florida. Broadcast engineers say that limiting
interference between a main channel signal and
booster can be a challenge. Geo-Broadcast
Solutions said the purpose of the test at WRMF is
to prove ZoneCasting will not cause that type of a problem.

WW SPECIAL INTEREST GROUPS --- FEMALES IN RADIO
ALARA - AUSTRALIAN LADIES AR ASSOCIATION
http://alara.org.au
Net is held each Mondays on 3.570 MHz, commencing at 1030 UTC.
(1000utc during daylight saving)

Meet The YL's Of Amateur Radio"

Jean VK3VIP President and VK3 State Representative for ALARA asks
"Would you like to meet YL's interested in Amateur Radio?"

If so then you are invited to go along to Bundoora Park Rotunda no 6 from
10:30am Sunday January 27. (That's in maiden head square QF22MH).

Assisted by members of WANSARC the Ladies of ALARA will be holding a special
meet the YL's BBQ. BYO Meat but salads and sweets along with tea and coffee
will be provided.

Talk in 146.450Mhz Simplex"

There will also be a special event station operating and the entire day will
be televised on VK3RTV digital ATV

WW SPECIAL INTEREST GROUPS --- FINAL FRONTIER

Mission confirmed: British singer Brightman to blast off to space

The Space Adventures agency has confirmed that Phantom of the Opera star Sarah Brightman has signed an agreement with the Russian Space Agency and secured herself a space trip in 2015.

"All legal matters have been settled," the Space Adventures agency said in a statement.

Last month the singer told Russian Trud newspaper she will also have to learn some Russian before her space trip to be able to communicate with the crew.

"I wish some alien would kidnap me," the singer who was once married to composer Andrew Lloyd Webber and starred in the original "Phantom of the Opera" productions said in October.

The Russian Space Agency did not disclose any details of the contract with Brightman, who will join professional cosmonauts on a Russian Soyuz mission to the international space station in three years' time

CALLING FREQUENCIES
Please QSY off the calling frequency after establishing communication.

Australian voice calling frequencies:
3.650, 7.090, 14.190, 21.190, 28.590, 52.160

World CW calling frequencies:
3.570, 7.030, 14.060, 18.080, 21.140, 24.910, 28.180, 50.160

World voice calling frequencies:
3.690 & 3.940 MHz, 7.090 & 7.190, 14.290, 18.140, 21.360,
24.960, 28.390, 50.160

Calling frequencies for Slow Scan TV (SSTV):
3.630, 7.033, 14.227

Calling Frequencies for PSK31
14.070

How time flies, as they say and the 2nd of January may be a Scots day of recovery after Hogmanay but in Maryborough, Queensland, it marks the beginning of 10 action packed days of the Australian Scout Jamboree, AJ2013.

During this past week the courier brought the well boxed HF radio which Icom Australia has donated to the event.

VK4KEV has configured his Echo/IRLP box and registered the Jamboree call sign VI4ASJ for use on the amateur internet linking services of EchoLink and IRLP. Providing the internet remains up, contact from the Jamboree will be

available through these services 24hours a day, worldwide, using 2m simplex.

To find the Jamboree station on EchoLink, you will need to look under the -L listings and with a VI prefix it should be top of the Australian calls. On IRLP the node number will be 6496

Refer to page 27 of this month's Amateur Radio magazine for a listing of the VK and worldwide Scouting calling frequencies. If the magic band of 6m is running listen on both the SSB and FM frequencies.

This station is licenced to operate for 14 days only and at the height of the Aussie summer should provide some interesting contacts with T/E, troppo and ducting all possible. Listen out for VI4ASJ from 1st January, 2013.

For WIA News, I'm Geoff, VK4ZPP from MERG, Inc.

WW SPECIAL INTEREST GROUPS --- RESCUE RADIO
IARU REGION 3
Emergency Centre of Activity (CoA) frequencies
3.600, 7.110, 14.300, 18.160 and 21.360 MHz

WICEN members in Tassie, Peter VK7KPC, Wayne Hodge & Norm VK7KTN attended the Endurance Horse Riding State Championships at Sassafras.

A field of 100+ riders and 2 simultaneous events made for a busy time on the radios.

A highlight of the weekend was the inaugural use of CCARC's mobile comms trailer. This a cabin built on top of a tandem trailer, which is an improvement over a tent normally used for base HQ. It also obviates the risk of 240V equipment mixing with the environment in a wet tent.

CCARC & NTARC WICEN groups have also agreed to investigate the use of the Narrow Band Emergency Messaging System.

N.B.E.M.S, which has been adopted by the ARRL, is based on the use of any transceiver with a digital box (e.g. SIGNAL LINK) attached. Messages are transmitted using email like forms to a base & then decoded, and can be put direct into word processor or spread sheet.

Message protocols are based on United Nations Disaster Management Systems, giving this system a worldwide standard.

(sourced to vk7wi news)

Hams ready for double disaster

Typhoon Bopha that killed at least 700 people in southern Philippines, leaving a trail of mayhem behind, re-emerged out of the South China Sea last week to hit the northern part of the archipelago.

The Philippines's strongest typhoon first reached landfall on the island of Mindanao with 210km'/h winds on December the 4th, and returned to Luzon in the north last weekend.

Active during both disasters were the ham radio networks, organised through the national IARU society, the Philippines Amateur Radio Association (PARA).

Those nets handled emergency and welfare traffic, gave weather reports, detailed utility and infrastructure outages.

The typhoon just missed nearby Guam and was headed for the southern island of Mindanao.

At the time PARA had its 80th birthday celebrations in Manila. Soon after it asked that the emergency nets activate on VHF, for long haul traffic 7095 kHz, echo-link and social media.

What unfolded was an outstanding effort that included evacuations of riverside and low-lying communities and coordination of rescues including those at sea.

The networks played an important coordination role in the south with the Disaster Response Team of the Philippine Red Cross, Delta Fire Volunteers, and the Coastguard.

Among the action was DX5RAN, the District 5 Radio Amateur Network. That net worked with the City Government of Tacloban and the City Disaster Risk Reduction Management Council.

There were many radio amateurs involved. As the toll rose and losses, including export banana plantations on Mindanao mounted, the typhoon returned to northern Luzon. Although downgraded it dumped heavy rain causing flooding and landslides.

Early evacuations in both the south and the north were attributed by the authorities as saving many lives. Many are still missing in southern areas and fishermen at sea.

More than 5.4 million people were affected including 116,400 in evacuation centres.

The Vice Chief Operating Officer of PARA, Ramon J. Anquilan DU1UGZ, said both nets were now closed.

He thanked everyone for coordinating the activities and the worldwide assistance in keeping the HF emergency frequency clear.

(Jim Linton VK3PC, Chairman IARU Region 3 Disaster Communications Committee)

HamRadioNow: APRS, APRS, and even more APRS... from the DCC

Posted: 13 Dec 2012 08:12 AM PST
http://forums.qrz.com/showthread.php?371945-HamRadioNow-APRS-APRS-and-even-more-APRS-from-the-DCC&goto=newpost

HAMRADIONOW.tv

Episodes 38, 39 and 40 from the ARRL/TAPR DCC

Episode 38: An Open-Source APRS-IS Server

Running on Raspberry Pi, no less! APRS-IS is the network that shuttles all
that APRS data

around the world. The results show up on web sites like www.aprs.fi. In
this talk, aprs.fi's

Hessu Hannikainen OH7LZB digs into the stuff that makes APRS-IS run. And
yes, he has

one of the servers running on a little Raspberry Pi.

Episode 39: YAAC - Yet Another APRS Client

Andrew KA2DDO titled his talk as if there were too many APRS clients, and
maybe there are.

But his list of features and functions in this multi-platform program has
Bob Bruninga smiling.

Bob makes a guest appearance at the end of the episode. If you use APRS and
have been

hunting for a better interface, here's a rare opportunity to learn about a
good new one, in depth,

from the guy who wrote it.

HamRadioNow

Episode 40: APRS.fi - Behind the Curtains

If you're into APRS at all, odds are you've spent a fair amount of time on
the APRS.fi web site.

Odds also are that you've missed a lot of the features and functions of the site! And unless you've

already watched Episode 38, you have no idea who and what is behind this amazing web site.

So meet Hessu Hannikainen OH7LZB and get to know this resource a lot better.

HamRadioNow

The ARRL/TAPR DCCis an annual, three-day conference featuring presentations on a variety of

technical and operational aspects of Amateur Radio. This year's DCC, held in Atlanta last

September, had 16 of the 45-minute main presentations, the usual Saturday banquet talk,

and a four-hour "deep dive" into GNU radio on Sunday. HamRadioNow videotaped all the talks,

and we are now releasing them on-line. We'll continue with one or two a week until

you have them all.

Watch these episodes at our web site, www.HamRadioNow.tv.

This is the last ARRL Letter and ARRL Audio News for 2012. Both the
ARRL Letter and ARRL Audio News will resume Thursday, January 10, 2013.
Thanks for reading The ARRL Letter each week -- we'll see you next
year!

==> + FCC NEWS: ARRL FILES PETITION FOR RULEMAKING WITH FCC TO CREATE
NEW MF BAND AT 472-479 KHZ

<http://www.ntia.doc.gov/files/ntia/publications/spectrum_wall_chart_aug2011.
pdf>
At the 2012 World Radiocommunication Conference (WRC-12), delegates
approved a means of satisfying Agenda Item 1.23: a 7-kilohertz-wide
secondary allocation between 472-479 kHz for the Amateur Radio Service,
with a power limit of 5 W EIRP (or 1 W EIRP, depending on location).
Before this portion of spectrum is made available to radio amateurs in
```

the US, the FCC must first approve its use and amend its rules to reflect the change. As such, the ARRL filed a Petition for Rulemaking on November 29, asking the FCC to amend Parts 2 and 97 of its rules and create a domestic Amateur Radio allocation at 472-479 kHz, conforming to the allocation status and limitations set forth in the international Radio Regulations. Read more here <http://www.arrl.org/news/arrl-files-petition-for-rulemaking-with-fcc-to-crea te-new-mf-band-at-472-479-khz>.

==> + FCC NEWS: FCC REDUCES NEW JERSEY HAM'S FORFEITURE FROM $20,000 TO $16,000

After unsuccessfully appealing to the FCC to cancel his $20,000 forfeiture, Joaquim Barbosa, N2KBJ, of Elizabeth, New Jersey must pay $16,000 for "willfully and repeatedly violating Section 301 of the Communications Act of 1934, as amended by operating a radio transmitting equipment on the frequency 296.550 MHz without Commission authorization."

The FCC noted in the Forfeiture Order that based on the examination process involved in pursuing an amateur license, "amateur licensees are expected to have an understanding of radio operations and pertinent FCC regulations, including Part 97 of the FCC's rules governing the Amateur Radio Service. Licensed amateur operators know that they are authorized to operate only on the frequencies listed in Section 97.301 of the rules, as designated by their operator class and license. Pursuant to the Table of Allocations, the 267-322 MHz band -- the band that Barbosa was operating in -- is allocated solely for federal government use, which we continue to believe Barbosa knew (or should have known) was not authorized for non-government use." Read more here <http://www.arrl.org/news/fcc-finds-new-jersey-ham-violated-communication-act -reduces-forfeiture-from-20-000-to-16-000>.

==> + INTERNATIONAL: IARU WELCOMES TWO NEW MEMBER SOCIETIES

Earlier this year, the International Amateur Radio Union (IARU) notified its Member Societies that two new national Amateur Radio organizations wished to join the IARU and would need to be voted in: the Federation of Radio Sport of Azerbaijan (FRSA) and the St Vincent and Grenadines Amateur Radio Club (SVGARC). Ballots from all the Member Societies that responded were counted on November 1 and adopted.

Based in Baku, Azerbaijan, the FRSA was formally organized on December 30, 2001. There are 50 licensed members of the FRSA out of a total amateur population of approximately 50 in Azerbaijan. The SVGARC is based in St Vincent, St Vincent and the Grenadines and was formally organized in 1951. There are 21 licensed members of the SVGARC, out of a total amateur population of approximately 134 in the country. Both organizations have confirmed to the IARU that they have the ability to meet financial obligations as members of the IARU, are legally able to act in the furtherance of IARU objectives within their respective countries and will adhere to the Constitutions of both the IARU and its

respective Regional Organization. Read more here

delines-for-election-of-president-and-vice-presid>.

==> + LOGBOOK OF THE WORLD WEB PAGE NOW FEATURES DAILY AND HOURLY
STATUS UPDATES

The ARRL has created a new informational page
<http://www.arrl.org/logbook-of-the-world> to issue daily status
updates and information of interest to the Logbook of The World (LoTW
<http://www.arrl.org/logbook-of-the-world>) user community. These
updates will include planned downtime and changes that will impact LoTW
operations. In addition, LoTW's processing queue is now updated hourly
<http://www.arrl.org/logbook-queue-status>, telling how many logs and
QSOs have been uploaded to the LoTW system and are awaiting processing.
New hardware that will improve LoTW's throughput is on order and is
expected to be running in six to eight weeks.

Rick Murphy, K1MU, and Dave Bernstein, AA6YQ, have been charged with
rebooting the Trusted QSL open source project. If you have demonstrably
strong C++ development skills that you're interested in applying toward
improving LoTW's usability and efficiency, please contact Bernstein via
e-mail aa6yq(at)ambersoft(dot)com.

We appreciate the user community's patience while we work to bring
LoTW's performance to an acceptable level.

==> + CATCH THE GEMINIDS AND CHAT WITH NASA'S METEOR EXPERTS

The annual Geminids meteor shower, scheduled to reach its peak on
December 13 and 14, is slated to be the most intense shower of the
entire year. This is also prime time for amateurs who enjoy bouncing
their VHF signals off the ionized trails of these space rocks as they
streak into our atmosphere. Known as meteor scatter, this communication
technique takes advantage of temporary radio pathways that can span
nearly 2000 miles. The week of December 10-16 is a good window for
Geminid watching, but the night of Thursday, December 13 is the
anticipated peak of the shower.

On Thursday, December 13 from 11 PM-3 AM EST (0400-0800 UTC December
14), meteor experts from NASA's Marshall Space Flight Center will be
available to answer questions via a late night web chat. NASA will also
provide a live Ustream feed of the Geminid shower via a camera mounted
at NASA's Marshall Space Flight Center in Huntsville, Alabama. Before
the camera activates, viewers will see either pre-recorded footage or a
blank box. The camera is light activated and will turn on at dusk. Read
more here
<http://www.arrl.org/news/catch-the-geminids-and-chat-with-nasa-meteor-expert
s>.

==> THE YASME FOUNDATION ANNOUNCES 2012 YASME EXCELLENCE AWARD
RECIPIENTS AND SUPPORTING GRANTS

The Yasme Excellence Awards <http://www.yasme.org/excellence.html> are given to individuals who through their own service, creativity, effort and dedication, have made a significant contribution to Amateur Radio. Their contribution may be in recognition of technical, operating or organizational achievement. The Yasme Excellence Award is in the form of a cash grant and an engraved crystal globe.

The Yasme Foundation <http://www.yasme.org/> has recognized the following individuals "in order to inspire them and others on behalf of Amateur Radio now and in the future."

- George Fremin, K5TR; Tree Tyree, N6TR; Trey Garlough, N5KO, and Scott Neader, KA9FOX, for their contributions to many infrastructure projects that benefit the ham community at large.
- ARRL Education and Technology Program Director Mark Spencer, WA8SME, for his instrumental work in the ARRL Teachers Institute on Wireless Technology
<http://www.arrl.org/teachers-institute-on-wireless-technology> and other training efforts, development of PIC microcontroller projects and books for amateurs, as well as working with leaders in student and scientific teams in applying Amateur Radio to scientific projects and experiments.
- Champ Muangamphun, E21EIC, and Pornchai Semjang, HS2JFW, for leadership in Thailand's amateur community, especially during the recent flooding which helped open the door to the new Thai HF licensing and the enhanced stature of Amateur Radio with the Thai government.
- Former NCJ <http://www.arrl.org/ncj> Editor Carl Luetzelschwab, K9LA, and Tomas Hood, NW7US, for their sustained education of the amateur community regarding propagation, solar and geomagnetic physics.
- David Freese, W1HKJ, for creating and maintaining the freeware software package Fldigi <http://www.w1hkj.com/Fldigi.html>, probably the most widely used digital communication software in ham radio and a frequent gateway for new hams who are more familiar with computer-based communications.
- Former ARRL Assistant Technical Editor Dean Straw, N6BV, for his contributions to amateur antenna system design and the development of software tools, such as HFTA to optimize system design.
- Peter Martinez, G3PLX, and Pawel Jalocha, SP9VRC, for the development of PSK31 <http://www.arrl.org/psk31-has-rtty-s-replacement-arrived>, a widely used digital mode entirely invented by amateurs that is enabling many amateurs to successfully use HF with very modest stations.
- Arie Kleingeld, PA3A; Ad Van Ginneken, PA8AD, and Arie Noordzij, PA3AN, for their sustained contributions to the Mercy Ships Project <http://www.mercyships.org/>.

The Board of Directors also announces supporting grants to the following projects: WRTC 2014 <http://www.wrtc2014.org/>, the World Wide Radio Operators Foundation (WWROF <http://www.wwrof.org/>), Club Log <http://www.clublog.org/>, the NCDXF Beacon Project <http://www.ncdxf.org/>, Yasme scholarships (administered by the ARRL) and the Amateur Radio Association of Kosovo (SHARK).

The Yasme Foundation is a not-for-profit corporation organized to conduct scientific and educational projects related to Amateur Radio, including DXing and the introduction and promotion of Amateur Radio in developing countries.

==> ARRL INVITES NOMINATIONS FOR 2012 INTERNATIONAL HUMANITARIAN AWARD

Nominations for the 2012 ARRL International Humanitarian Award close December 31, 2012. This award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize those radio amateurs who have used ham radio to provide extraordinary service to others in times of crisis or disaster.

As one of the few telecommunication services that allow people throughout the world from all walks of life to meet and talk with each other, Amateur Radio spreads goodwill across political boundaries. The ARRL International Humanitarian Award recognizes the Amateur Radio Service's unique role in international communication and the assistance amateurs regularly provide to people in need. Read more here <http://www.arrl.org/news/arrl-invites-nominations-for-2012-international-humanitarian-award-1>.

==> SOLAR UPDATE

Tad Cook, K7RA, reports: The average daily sunspot numbers fell 13.5 points this week, from 61.1 to 47.6, while the average daily solar flux was about the same this week as last, rising 1.1 points to 102.7. The geomagnetic indices were even quieter this week than last week. The predicted solar flux is 110 on December 13, 115 on December 14, 120 on December 15-17, 115 on December 18, 110 on December 19-20, 115 on December 21-23, 110 on December 24-27, 100 on December 28-29, 95 on December 30-January 3, 100 on January 4-5, and rising to 105 on January 6-8. The predicted planetary A index is 8 on December 13, 5 on December 14-15, 10 on December 16-17, 5 on December 18-28, 8 on December 29, 5 on December 30-January 5, 7 on January 6-7, 5 on January 8-9, and rising again to 8 on January 10-11. Look for more on the ARRL website -- including reports from last weekend's ARRL 10 Meter Contest <http://www.arrl.org/10-meter>, updated forecasts and a some minor revisions from both NASA and NOAA to the latest predictions for the peak of Solar Cycle 24 -- on Friday, December 14. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>.

==> + ARRL HEADQUARTERS TO CLOSE FOR CHRISTMAS, NEW YEAR'S HOLIDAYS

ARRL Headquarters will be closed Monday, December 24 and Tuesday, December 25, 2012 in observance of Christmas, and Tuesday, January 1, 2013 in observance of New Year's Day. There will be no W1AW bulletins or code practice transmissions <http://www.arrl.org/w1aw-operating-schedule> those days. There will be no ARRL Letter <http://www.arrl.org/arrlletter/> or ARRL Audio News

<http://www.arrl.org/arrl-audio-news> on Thursday, December 20 and 27, 2012 and January 3, 2013; both the Letter and Audio News will return on January 10, 2013. We wish everyone a safe and joyful holiday season and a prosperous 2013.

This Week in Radiosport

This week:

- December 14 -- NCCC Sprint; Russian 160 Meter Contest
- December 15 -- OK DX RTTY Contest; Feld Hall Sprint
- December 15-16 -- Croatian CW Contest
- December 16 -- ARRL Rookie Roundup (CW) <http://www.arrl.org/rookie-roundup>; QRP ARCI Holiday Spirits Homebrew Sprint
- December 17 -- Run for the Bacon QRP Contest

Through January 11, 2013:

- December 21 -- NCCC Sprint; AGB Party-Contest
- December 22-January 1 -- Lighthouse Christmas Lights QSO Party
- December 23 -- RAEM Contest
- December 26 -- SKCC Sprint; DARC Christmas Contest
- December 27 -- NAQCC Straight Key/Bug Sprint
- December 28 -- NCCC Sprint
- December 29 -- RAC Winter Contest
- December 29-30 -- Stew Perry Topband Challenge
- January 1 -- ARRL Straight Key Night <http://www.arrl.org/straight-key-night>; SARTG New Year RTTY Contest; AGCW Happy New Year Contest
- January 4 -- NCCC Sprint Ladder
- January 5 -- PODXS 070 Club PSKFest
- January 5-6 -- ARRL RTTY Roundup <http://www.arrl.org/rtty-roundup>; EUCW 160 Meter Contest
- January 11 -- NCCC Sprint Ladder

All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more information. Looking for a Special Event station? Be sure to check out the ARRL Special Event Stations web page <http://www.arrl.org/special-event-stations>.

==> UPCOMING ARRL SECTION, STATE AND DIVISION CONVENTIONS AND EVENTS

- January 6 -- ARRL New York/Long Island Section Convention <http://www.arrl.org/hamfests/new-york-city-long-island-section-convention-ham-radio-university-2013-1>,
Bethpage, New York
- January 18-19 -- ARRL North Texas Section Convention <http://www.arrl.org/hamfests/north-texas-section-convention-cowtown-hamfest-1>,

Fort Worth, Texas
- January 19 -- ARRL Southern Florida Section Convention
<http://www.arrl.org/hamfests/southern-florida-section-convention-3>,
Fort Myers, Florida
- January 25-26 -- ARRL Mississippi State Convention
<http://www.arrl.org/hamfests/mississippi-state-convention-capital-city-hamfe
st>,
Jackson, Mississippi
- January 26-27 -- ARRL Puerto Rico State Convention
<http://www.arrl.org/hamfests/puerto-rico-state-convention>, Hatillo,
Puerto Rico
- February 2 -- ARRL South Carolina State Convention
<http://www.arrl.org/hamfests/south-carolina-state-convention-2>, North
Charleston, South Carolina; ARRL Virginia State Convention
<http://www.arrl.org/hamfests/virginia-state-convention-frostfest-1>,
Richmond, Virginia
- February 8-10 -- ARRL Southeastern Division Convention
<http://www.arrl.org/hamfests/southeastern-division-convention-orlando-hamcat
ion-1>,
Orlando, Florida
- February 15-16 -- ARRL Arizona State Convention
<http://www.arrl.org/hamfests/arizona-state-convention-yuma-hamfest-1>,
Yuma, Arizona
- February 16 -- ARRL Arkansas State Convention
<http://www.arrl.org/hamfests/arkansas-state-convention-winterfest>,
Hoxie, Arkansas
- February 23 -- ARRL Vermont State Convention
<http://www.arrl.org/hamfests/vermont-state-convention-ham-con-3>,
South Burlington, Vermont
- March 8-9 -- ARRL Oklahoma Section Convention
<http://www.arrl.org/hamfests/oklahoma-section-convention-green-country-hamfe
st-1>,
Claremore, Oklahoma; ARRL Louisiana Section Convention
<http://www.arrl.org/hamfests/louisiana-section-convention-acadiana-53rd-annu
al-hamfest>,
Rayne, Louisiana
- March 16 -- ARRL Nebraska State Convention
<http://www.arrl.org/hamfests/nebraska-state-convention-2>, Lincoln,
Nebraska; ARRL West Texas State Convention
<http://www.arrl.org/hamfests/west-texas-section-convention-58th-annual-st-pa
trick-s-day-hamfest>,
Midland, Texas
- March 23 -- ARRL South Texas State Convention
<http://www.arrl.org/hamfests/south-texas-section-convention-greater-houston-
hamfest-3>,
Rosenberg, Texas
- March 29-30 -- ARRL Maine State Convention
<http://www.arrl.org/hamfests/maine-state-convention-3>, Lewiston,
Maine
- March 30 -- ARRL North Carolina State Convention

<http://www.arrl.org/hamfests/north-carolina-state-convention-raleigh-hamfest
-2>,
Raleigh, North Carolina
- April 13-14 -- Communications Academy
<http://www.arrl.org/hamfests/communications-academy-2013>, Seattle,
Washington
- April 19-20 -- Southeastern VHF Society Conference
<http://www.arrl.org/hamfests/svhfs-conference>, Cocoa Beach, Florida
- April 19-21 -- International DX Convention
<http://www.arrl.org/hamfests/international-dx-convention-2>, Visalia,
California
- April 20 -- ARRL Louisiana State Convention

NZART Headquarters Infoline Issue 264

14 December 2012

MERRY CHRISTMAS FROM NZART HQ

NZART Website: www.nzart.org.nz

In this issue:

· From the desk of HQ

· Amateur access to 600 Metres – ZL2TLL ALO

· Conference 2013 Masterton

· VHF-UHF-SHF-EHF Contest News

· Jock White Memorial Field Day Contest

· ZL9HR Update

Debby Says…well Christmas is almost upon us for another year and it has certainly been a busy one for me here at Headquarters.

The recent membership promotion has been a great success.

A total of 3176 letters were posted to all those who were not presently members of the Association, however there were a couple included whose call signs had changed, but I had neglected to update the NZART database, therefore they too received a letter by mistake.

I am pleased to advise that 236 amateurs have taken the opportunity to join with this special promotional offer. Of those, 115 are newcomers to the Association, with 121 re-joining after a lapsed period.

We must all now strive to retain these members next year when subscription levies return to the normal fee, however I am sure you will continue to encourage their much valued membership.

The special prize draw was conducted under the supervision of the Vice President Stuart Watchman ZL2TW. The winner of the VHF handheld was Tim Hogan ZL2BI, who was contacted by his local NZART Councillor JohnZL2HD, to congratulate him on his good fortune. Tim was very pleased to be getting back into amateur radio after more than 10 years away from it. His wife's comment was "I think I've lost my husband to ham radio again!", but she was assured that she could join in as well! Tim was also presented with a complimentary membership of Branch 74 to go with

his new NZART membership and the handheld, and invited to attend the Branch's next meeting. Tim was an active HF contester and was an active branch member in the 1980s and 1990s.Congratulations on behalf of us all Tim.

Council elections nominations close on the 31st December, so please make sure you have your candidates forms to me by this date.

Remit submissions also close on this date, so if you haven't already considered these two very important aspects of your Association, you had better get in quick.

Finally, for all those Officers who think they can relax for the holidays, can you please make sure you have your annual reports prepared and forwarded to me by the 24th January.

NZART Headquarters will be closed from 31st December until 15th January.

That's all from me this year folks…enjoy your holidays and stay safe.

Debby ZL2DL

Amateur Access to 600 Metres

As members may be aware, the band 472 kHz to 479 kHz was allocated to the Amateur service for use on a secondary basis at the World Radiocommunication Conference (WRC) held earlier this year.

We have now agreed the basis on which New Zealand Amateurs will be given access to this band with the Radio Spectrum Policy and Planning Group of the Ministry of Business, Innovation & Employment:

· Frequency range: 472 kHz to 479 kHz

· Type of allocation: Secondary (see definition below)

· Power Output: 25 W eirp

· Bandwidth restrictions: None (the previous 200 Hz limit is removed)

As a result of this new allocation, Amateurs will no longer have access to the previous temporary allocation at 505 – 515 kHz. The Ministry has, however, agreed that the temporary use in the band 505 kHz to 515 kHz will be permitted for one further year, until the end of 2013, to provide amateurs with an opportunity to retune and/or rebuild their equipment.

It is intended that the necessary alterations to the Amateur General User Licence will be made early in the New Year.

Definition of Secondary Allocation

For members who are unfamiliar with the concept of a secondary allocation, the following excerpt from the International Radio

Regulations may be of interest:

“Allocations are made on a primary or on a secondary basis.
Stations of a secondary service cannot cause harmful interference to
stations of primary services to which frequencies are already assigned
or to which frequencies may be assigned at a later date. Stations of a
secondary service cannot claim protection from harmful interference from
stations of a primary service to which frequencies are already assigned
or to which frequencies may be assigned at a later date.”

Don Wallace, ZL2TLL, NZART Administration Liaison Officer

Annual Conference Masterton 2013

NZART Annual Conference is to be held next year on Queen's Birthday
weekend in Masterton at the:

Copthorne Hotel and Resort Solway Park Wairarapa

Planning is well under way and you can check in on progress at the
special web site at www.nzartconference2013.co.nz.

Links to the venue and other sites plus the Conference registration
form is also available for download from the site. Be in quick for
accommodation as a flat rate applies for any of the rooms including
standard right through to the executive suites. See online for more
details.

See you there.

VHF-UHF-SHF-EHF CONTEST NEWS

Field Day Contest Logs – December 1st & 2nd 2012

Many thanks to the teams who have already submitted their logs. Time is
running out for submitting logs. Please send any remaining logs by email
to: zl2wa@clear.net.nz

with Contest Log in the subject line.

The Next Contest

The next contest is the DX Weekend Contest, all bands 50 MHz and up, on
Saturday the 2nd and Sunday the 3rd of February 2013. The operating
times are: Saturday 1700 to 2300 NZST and Sunday 0700 to 1300 NZST.

The contest after that is the Low Band Contest, all bands 50 MHz to 440
MHz, on Saturday the 6th and Sunday the 7th of April 2013. This is the
weekend after Easter. The operating times are: Saturday 1700 to 2300
NZST and Sunday 0700 to 1300 NZST.

The Contest Rules are available at:
www.vhf.org.nz/VHF-UHF-SHF-ContestRules

All contest logs should be sent, to arrive within two weeks, to:
zl2wa@clear.net.nz

with Contest Log in the subject line.

Or by post to:

Contest Manager

Wellington VHF Group

P.O. Box 12-259

Thorndon

Wellington

Please include your email address if you wish to receive the results as soon as they are available.

Jock White Memorial Field Day Contest

When: Saturday and Sunday February 23rd and 24th 2013.

Times: (NZDT): 1500 to 2400 Saturday then 0600 to 1500 Sunday

Home stations can also operate in the contest but are strongly encouraged to make a minimum of either 50 phone or 25 CW contacts on 80m and/or 40m and submit logs.

Why not combine the event with a club BBQ / Picnic?

Rules: For the latest version please see:
http://www.nzart.org.nz/activities/contest-rules/rules-jock-white-field-day/ Team leaders must be familiar with the rules as on the NZART web site.

Bands, Modes and Power

40 and/or 80 metres, PHONE (SSB) and/or CW, 100 watts maximum.

Stations using two transmitters may operate simultaneously on both bands, however only one transmitter may be operated any one band at any one time. Single transmitter stations may operate on one or both bands.

Sections

Categories:

• Single Operator – unassisted by any other person.

• CW only – single band or two bands

• Phone only – single band or two bands

• 80m only

• Single-transmitter station 40m and 80m

• QRP – 5 watts maximum (WM Hall Memorial Cup)

• Home stations

• Overseas stations in the South Pacific area

Branch Number

If you intend to operate with a branch number that is not that of your 'home' branch, please check the branch number section of the rules carefully. If you need any help or clarification please contact me at my e-mail address below.

I am looking forward to hearing you on, I will be active as part of the Marlborough, ZL2KS team.

Stuart Watchman

ZL2TW, manager.

clareandstuart@xtra.co.nz

"IARU Monitoring System Intruder Watch DK9KR retires and hands over to Peter Jost HB9CET
Resignation as a Vice Coordinator of IARU Monitoring System Intruder Watch and as Coordinator of DARC Bandwatch.

Dear fellow Intruder Busters of IARU Monitoring System Region 1.

Sometimes you have to say good bye to activities which you have liked doing for many years:
So I want to inform you that by 31. December 2012 I will resign from both jobs, the Vice Coordinator of IARU Monitoring System Region 1 and the Coordinator of DARC Bandwatch.

I have been a member of DARC Bandwatch for 45 years, and I am a founder member. For 26 years I have been the Coordinator of DARC Bandwatch. My long time job as a Coordinator of DARC Bandwatch was only possible because I had the big help of Wolf Hadel, DK2OM, my Vice Coordinator at DARC-MS, who has been supporting my work for 24 years.

In 2005 at the IARU Region 1 Conference in Davos Wolf Hadel was elected Coordinator of IARU MONITORING SYSTEM Intruder Watch, and I was elected his Vice Coordinator. His enormous dedication made it possible that now we have 24 Intruder Watches in Region 1.

In 2005 there were only 8. DARC Bandwatch is the most active of all Intruder Watches in Region 1. This was only possible by the enormous input of time by both of Wolf and myself. But I must admit that DARC Bandwatch is more or less a "Two-Men-Business". It consists of Wolf Hadel and myself.

We have about 5 (!) regular contributors. The other 38.000 members of DARC apparently do not hear any intruder on exclusive Amateur Radio frequencies or do not report intruders to the Monitoring System. They are taking part in contests instead or try to reach a new country for their QSL collection. This is not very much encouraging for both of us! We have allocated our jobs: Wolf has become a real specialist dealing with digital intruders.

Some years ago the Swiss producer Wavecom has sponsored to him the most sophisticated equipment to take fingerprints from digital signals. Almost every day he would ring up the German Telecoms authorities in Konstanz, our partner, to report an intruder or to ask them to pin point an intruder.

I have been concentrating on Broadcast Intruders and pirates in spoken voice as I speak several languages. When I hear a broadcast intruder in the range 7000 - 7200 kHz I would first inform the German telecoms authorities and IARU MONITORNG System. If there is no ham radio association in such a country (e.g. in Somaliland or Eritrea) I would send emails, faxes and written letters to the relevant embassy in Berlin, to the broadcaster itself and/or to its telecoms authority. In many cases
these actions were successful. The last success was the frequency change of Radio Bangladesh off 7105 kHz.

Also for 25 years in every second edition of CQDL, the pamphlet of DARC, I would write articles about the situation in our bands and invite fellow radio hams to participate in our system. No response from the Brotherhood of Radio Amateurs!

In 2003 prostate cancer was detected in my body. I had to undergo prostatectomy surgery, exposure to radiation therapy and treatments with hormones, new kinds of drugs and chemo therapeutic infusions. In January 2013 I will have to undergo more examinations to detect further growth of the bone metastases in my body and find out new treatment.

Right now I am feeling rather fine. The hair has grown again: When Hans, PB2T, awarded me the IARU Region 1 Medal this summer at Friedrichshafen Ham Radio Fair I had to wear a base cap because all my hair had gone.

In my situation I have thought over my huge commitment of time, some 2 - 4 hours every day during 26 years into the intruder watch monitoring. There are 38.000 members of DARC who are doing absolutely nothing for the defence of our bands, and I would place my alarm clock at 2.30 hours in the early morning to find out the program schedule of Radio Myanmar or Radio Sri Lanka in the 40- m-band... How crazy of me!

OM Peter Jost HB9CET is so kind to be my follower at IARU MONITORING SYSTEM Intruder Watch. Also he has very sophisticated equipment from Wavecom, and he is an experienced monitoring person and has very good contacts to the Swiss telecoms authorities "BAKOM" and also to the Swiss Military. So he really is the right man at the right place.

For DARC OM Wolf Hadel, DK2OM, will be responsible as a coordinator of DARC Bandwatch.
Thank you, dear Peter and Wolf!
I wish Peter and Wolf good luck, and above all, good health for their time consuming and difficult
task.
Thank you for all your good words and support of my work in the past. I greatly appreciate them.
Fraternally yours in the Amateur Radio hobby,
Ulrich Bihlmayer DJ9KR / DL0IW
Vice Coordinator of IARU MONITORING SYSTEM"

ZL9HR Update
The Hellenic Amateur Radio Association of Australia, ZL9HR team of ten Amateurs from around the world, arrived safely back on the New Zealand mainland on Tuesday 11th. December having completed operations on Campbell Island in the early hours of Sunday morning 9th. December (local time). On arrival back into New Zealand, the last of the log data was sent to the webmaster and the online log updated. The team of operators then set off back to their homes around the world with undoubtedly memories of a once-in-a-lifetime adventure.

Hi praise for the operation has been received by the pilots from Amateurs around the world and the question most often asked is “where will the HARAOA team go next?” - we'll all have
to wait a while before that question can be answered!

Putting on an expedition as big and as remote as this one costs a lot of money and it is not too late to make a small personal contribution to help with the costs if you wish to. This can be done at the website www.zl9hr.com.

The club log Online QSL Request System (OQRS) is active club log for those who wish to request their QSL cards electronically.

http://www.clublog.org/expeditions.php
Until the next one -
73 Ed, VK2JI, Publicity Officer for ZL9HR.

Amateur Radio Newsline(tm) Report 1844 - December 14 2012

Amateur Radio Newsline report number 1844 with a release date of December 14, 2012 to follow in 5-4-3-2-1.

The following is a Q-S-T. A high altitude balloon carrying an amateur radio APRS transponder flies from California to Morocco; D-Star tests coming to the High Frequency bands; two nations on opposite sides of the world gain access to 472 to 479 Kilohertz and more on the Department of Homeland Security sponsored emergency communications traing at the 2013 Dayton Hamvention. Find out the details are on Amateur Radio Newsline(tm) report number 1844 coming your way right now.

(Billboard Cart Here)

EMERGING TECHNOLOGY APRS BALLOON LAUNCHED IN CALIFORNIA LANDS IN MOROCCO

A group of high altitude balloon experimenters have achieved a milestone. This with confirmation that their K6RPT-12 APRS equipped high altitude balloon has successfully crossed the Atlantic and landed in Morocco. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Amateur radio stations from the United Kingdom to the Azores had been listening for the transatlantic balloon signing K6RPT-12 on 144.390 MHz FM. This after it was lofted skyward from California at about 0126 UTC on Monday, December 3rd.

The balloon was launched by the California Near Space Project team with the intent of it crossing the Atlantic heading for the British Isles. When it left the USA it was traveling at over 185 an hour but was believed to have slowed down in its over-water trek to as little as 55 miles an hour. Knowing this, the payload was designed for over 60 hours of flight. It also included a heating system for its 144.390 MHz FM transmitter developed by Johnathan Corgan, AE6HO, to prevent it freezing during overnight flight. This was because the bitterly cold night temperatures at that altitude have caused the transmitters on several amateur radio balloons to fail.

After its journey across the Atlantic its APRS signals were first picked up by stations in Spain. It was last heard at 09:22:31 UTC on December 5th descending rapidly, indicating that the balloon had finally burst. Its last recorded position was 34°25.75' North and 3°58.96' West placing it in the Taza Provence of Morocco North-North East of Tazekka National Park.

It is believed there are less than 150 radio amateurs in Morocco and no known APRS stations. As such the balloon and its payload may never be recovered.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

It should be noted that the amateur radio APRS frequency is not standardized world-wide. The United States uses 144.390 MHz while the British Isles and Europe use 144.800 MHz. To see the See the K6RPT-12 APRS reported flight track please take your web browser to tinyurl.com/k6rpt-12 on the World-Wide-Web. (California Near Space Project, Southgate, others)

**

EMERGING TECHNOLOGY: HF D-STAR TESTS TO BE HELD SATURDAY AND SUNDAY UTC

D-Star is coming to a high frequency band near you. According to a post on the Illinois D-Star Reflector, by Kent Hufford, KQ4KK, D-Star High Frequency tests will be held Saturday at midnight UTC and Sunday at 1500 hours UTC. D-Star operation will last only 5 minutes on each band beginning on 6 meters and working down to 10, 12, 15, 17, 20, 40 and finally 75 meters. The test will be compatible with Icom 9100 series transceivers and other D-Star equipped High Frequency transceivers. The posting did not mention specific frequencies to be used but asked those interested to monitor D-Star reflector 030C to coordinate. (KQ4KK, D-Star Reflector)

**

RESTRUCTURING: NEW ZEALAND HAMS GET 472 to 479 KHZ LOW FREQUENCY BAND

Hams in New Zealand are getting access to the 472 kHz to 479 kHz band. Amateur Radio Newsline's Jim Neachen, ZL2BHF, has more:

--

At the World Radiocommunication Conference held earlier this year the band from 472 kHz to 479 kHz was allocated to the Amateur service for use world wide on a secondary basis. Some nations almost immediately opened it to use by their ham radio communities and now it becomes our turn here, down under.

Its now has been agreed that New Zealand amateurs will be given access to this band following agreements made with the Radio Spectrum Policy

and Planning Group of the Ministry of Business, Innovation & Employment. And the rules they came up with are quite simple.

Like the rest of the world, the frequency range will be 472 kHz to 479 kHz on a secondary, non interfering basis with other spectrum users. Power output will be 25 watts effective radiated with no bandwidth restrictions.

As a result of this new allocation, New Zealand hams will loose access to the previous temporary low frequency allocation from 505 to 515 kHz. However the Ministry has agreed that the temporary use of the band by the nation's ham radio community will be permitted for another 12 months until the end of 2013. This is to provide amateurs with the opportunity to retune or rebuild their equipment to use the new band.

All in all not a bad way to end 2012 and begin the new year.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF, in Nelson, New Zealand.

--

The rules creating the 472 kHz to 479 kHz low frequency band in New Zealand come are effective on December 20th. (NZART)

**

RESTRUCTURING: NEW SPECTRUM FOR UK HAMS AT 474 KHZ AND 5 MHZ

Meantime over in the United Kingdom, holders of a UK Full class license will soon be able to apply for a Notice of Variation to their ham tickets This to use 472 to 479 KHz as well as three additional 5 MHz channels that will permit up to 6 kHz bandwidth emissions.

The new 472 to 479 KHz band is being created as a result of the World Radiocommunications conference held earlier this year. The added spectrum in the 5 Experimental Band is the outcome of negotiations between the spectrums primary user and telecommunications regulator Ofcom. The primary user was unable to agree to contiguous spectrum, however it has been agreed that three additional non-contiguous frequencies will be available.

Notices of Variation will be accepted after January 1st of 2013. Details on the application process will be published shortly. (GB2RS)

**

RADIO POLITICS: IARU ACCEPTS TWO NEW MEMBERS

The Federation of Radio Sport of Azerbaijan and the St Vincent and the Grenadines Amateur Radio Club are the two newest members of the International Amateur Radio Union.

The Radio Sport of Azerbaijan has some 50 members while the Grenadines Amateur Radio Club hosts 21. Both nations have relatively small ham

radio populations with the former representing all 50 of its ham radio population and the latter representing 21 of that nation's 134.

As of February, 2009, the International Amateur Radio Union was composed of 162 national member societies. The addition of The Radio Sport of Azerbaijan and the Grenadines Amateur Radio Club now brings that total to 164. (IARU, Southgate, others)

**

RADIO LAW: CONFRONTATIONAL WORLD CONFERENCE ON INTERNATIONAL TELECOMMUNICATIONS BEING HELD DUBAI

A confrontational United Nations internet regulation treaty being discussed at a gathering in Dubai may impact on amateur radio operators. This, according to the telecommunications information website dot-nxt. Amateur Radio Newslines Bill Pasternak, WA6ITF, explains:

--

At the heart of the issue is the term operating agencies. Currently the international telecommunication regulations or I-T-R's apply only to recognized operating agencies. This really means the large telecommunications operators in each country such as ATT and Verizon here in the United States.

Some countries want that term changed to just the term agencies. This would mean the I-T-R's would become applicable to a vastly larger number of groups. So rather than just ATT, British Telecom or Italia Telecom and the like, the international treaty would then apply to entities such as Google, Facebook, Microsoft and eBay just to name a few. In reality, just about every Internet company, as well private network operators, leased-line operators, government agencies and even amateur radio operators would be included in this new definition.

But this idea is not sitting well with many developed nations. Opposed so far are the United States, Canada, Japan, Korea, Mexico, Poland and the pan-European C-E-P-T and the Inter American Telecommunications Commission which is better known by the acronym Citel. On the other side in favor of the change are the Arab States, African States, Brazil, India, Philippines and several others.

In the meantime hthe entire conference risks grinding to a halt until this issue can be decided.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

You can find out more about the situation on-line at tinyurl.com/wcit-meeting-2012 (Dot-Nxt, NewsGateInternational)

ENFORCEMENT: KANSAS HAM ISSUED $10000 NAL FOR ALLEGED OPERATION OF FM BROSDCAST STATION

A ham in Kansas has been issued a $10,000 Notice of Apparent Liability to Monetary Forfeiture for allegedly operating an unlicensed FM broadcast station. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

The proposed $10,000 fine was issued on December 5th to Glen Rubash, licensee of Amateur Radio Station KC0GPV. This for what the FCC terms as his apparently willful and repeated violating of Section 301 of the Communications Act. This by operating an unlicensed radio transmitter on the frequency 88.3 MHz in Manhattan, Kansas.

By way of background, this past September 26th agents from the Enforcement Bureau's Kansas City Office T-hunted the source of an 88.3 MHz signal to a transmitting antenna mounted on a pole next to a residence in Manhattan, Kansas. The agents determined that the signals from the antenna exceeded the limits for operation under Part 15 of the Commission's rules and therefore required a license. The Commission's records showed that no authorization was issued to anyone for operation of an FM broadcast station at or near this address.

On September 27th the agents from the Kansas City Office again used direction-finding techniques to confirm if the station was still operating on 88.3 MHz from the same location, and found that it was. The agents, accompanied by the property owner, inspected the unlicensed station's antenna and transmitter. The latter was located in a locked detached garage. The property owner stated that he allowed Rubash to use the garage to operate the station and that he thought the operation was legal because Rubash told him that he was a licensed radio operator.

Later that same day a person it identified as Glen Rubash spoke to an agent from the Kansas City Office via telephone. At that time the regulatory agency claims that Rubash confirmed that he was an Extra class amateur licensee assigned call sign KC0GPV. He also admitted that he purchased the radio transmitter and that the station had been on the air for two months. The person on the phone reportedly added that he would not voluntarily relinquish the transmitter if asked to do so.

Now the FCC has acted in the case by proposing the $10,000 fine. It concludes, based on the evidence before it, that Mr. Rubash apparently willfully and repeatedly violated Section 301 of the Act by operating radio transmission equipment without the required Commission authorization and as such is liable for the proposed $10,000 fine.

For the Amateur Radio Newsline, Im, Norm Seeley, KI7UP, in Scottsdale, Arizona

--

As is customary, Rubash was given the customary 30 days to pay the proposed fine or to file an appeal. (FCC)

RESCUE RADIO: UPDATED INFORMATION ON DHS EMERGENCY RESPONSE CLASS AH HAMVENTION 2013

The Department of Homeland Security's Office of Emergency Communications has announced that on January 14, 2013, it will begin accepting registration requests for the training class that it will be sponsoring next May at the 2013 Dayton Hamvention.

Students requesting to attend must meet all pre-requisites and provide electronic scanned images of certain documents at the time of registration. These include proof of completion of FEMA emergency incident instructional sessions IS-100.b, IS-200.b, IS-700.a and IS-800.b. They must also provide a copy of their General Class or above FCC amateur radio license. The DHS says that it is important that all listed documents be submitted at one time along with the registration request in order to be considered.

The session is limited to 50 students and the registration process will be closed when that number of qualified students is reached. But even if you are not among the 50 selected to attend the session there will be other training available. Word is that the instructors conducting the course will also be giving a forum at Hamventionr 2013 regarding the use of trained amateur radio operators as backup communicators in an emergency operations environment.

More information including the actual class and the e-mail address for pre-registration will soon be posted on-line at www.Hamvention.org. (Press release)

**

RESCUE RADIO: AUSTRALIA ACMA FINDS STOLEN EMERGENCY BEACON

Australian Search and Rescue was recently alerted that an activated emergency position-indicating radio beacon, or EPIRB had been stolen from the city of South Melbourne. After narrowing down its initial search, Search and Rescue called in the expertise of a field inspector from the Australian Communications Authority or ACMA. Using a Yagi directional antenna, he eventually found the errant device hanging from

overhead power lines. It was safely retrieved for evidence by members of the Victoria Police. For those not aware, EPIRB's are automatic or manually activated search and rescue beacons linked to satellites when turned on. (VK3PC)

**

HAM HOLIDAY HAPPENINGS: GETTING INTO THE CHRISTMAS SPIRIT BY HAM RADIO

The Moose Jaw Canada Times Herald reports that kids in that city had a chance to tell their holiday gift requests to Santa up at the North Pole using amateur radio. Brenda MacKenzie, VE5TRG, and other members of the Moose Jaw Amateur Radio Club operated the ham radio links. You can read the complete story on-line at tinyurl.com/moose-jaw-holiday. (Via e-mail)

**

HAM HAPPENINGS: NAMES IN THE NEWS OKLAHOMA STUDENTS HOLD RADIO TRIBUTE ON PEARL HARBOR DAY

Okalahoma's Lawton Constitution newspaper reports that students at the Eisenhower Middle School's amateur radio club recently commemorated the 71st anniversary of Pearl Harbor Day. The club held the tribute to honor all veterans, but especially the 2,402 Americans killed in the December 7, 1941 Japanese sneak attack on the United States base in Hawaii.

Clifton Harper, KE5YZB, is the teacher who sponsors the amateur radio club. He told the newspaper that students started contacting other amateur radio operators around the world at 8:30 a.m. and continued until 3:30 p.m. both local time. Three separate stations were in use including one in a trailer from the Lawton Amateur Radio Club operating as W5KS.

According to the newspaper, about 140 students took part in the event throughout the school day. More is on-line at tinyurl.com/lawton-pearl-harbor. (Lawton Constitution)

**

HAM HAPPENINGS: WYONG MINI CONTEST UNIVERSITY OPEN FOR REGISTRATIONS

Registration to attend the free Mini Contest University at Australia's Wyong field day in February 2013 is now open. For details please visit tinyurl.com/contest-u-down-under on the World Wide Web. (VK2JI)

**

NAMES IN THE NEWS: HANDIHAM MANAGER'S TECHNOLOGY AWARD TO KK4JZX.

Some names in the news. Jose Tamayo, KK4JZX, has been named to receive the 2012 Handiham Manager's Technology Award. This for his dedication to the Handiham Remote Base software update project.

According to the Handihams, Tamayo has done exemplary work to debug and update the existing W4MQ remote base client software. He has lead the beta testing team and is working to build accessibility into the newest version of this important remote control client. (WA0TDA)

**

NAMES IN THE NEWS: BRITISH SINGER SARAH BRIGHTMAN TO BLAST OFF TO SPACE IN 2015

The Space Adventures Agency has confirmed that famed British soprano Sarah Brightman has signed an agreement with the Russian Space Agency and secured herself a space trip to the International Space Station for sometime in in 2015.

As previously reported here on Amateur Radio Newsline, about two months ago the singer was cleared to fly by the medical commission and set her schedule to begin gan her training at Russia's Cosmonaut Training Centre outside Moscow. More recently Brightman told a Russian newspaper she will also have to learn speak some Russian before her space trip to be able to communicate with the crew.

Brightman's eventual arrival on-orbit will denote a long period between visitors to the orbiting outpost. The last visitor was Cirque du Soleil founder Guy Laliberte who traveled into space in 2009. (G0SFJ, others)

CHANGING OF THE GUARD: CQ NEW PRODUCTS EDITOR JOHN WOOD, SR., WV5J -SK

The changing of the guard in amateur radio continues with the sad news that John Wood, Sr., WV5J, who served as CQ's New Products Editor since 2009, passed away on December 3 after a brief battle with cancer.

A lifelong journalist, Wood spent most of his career as a reporter and editor for newspapers in and around Memphis, Tennessee. He lived in the Memphis suburb of Germantown.

A contributor to CQ for several years on a variety of topics, John became editor of the "What's New" column as of the magazine's December, 2009, issue. He continued writing occasional feature articles as well. His most recent, "There's a 'Secret Service' in Memphis on the 222 Ham Band," appeared in the Fall 2012 issue of CQ VHF.

Wood is survived by his wife of 41 years, Marie, WA4WFX; his son, John, Jr., KI4VCK; his daughter, Christi, and two grandchildren. The family requests that contributions in John's memory be made to the St. Jude Children's Research Hospital. At the time of his passing John Wood, Sr., WV5J, was only age 61. (CQ)

**

CHANGING OF THE GUARD: HELICOPTER NEWS PIONEER JOHN SILVA -SK

The man who invented helicopter coverage for television, has died. John D. Silva was the chief engineer for Los Angeles television station KTLA when he convinced station executives to give him $40,000 to outfit a rented Bell helicopter with a TV camera for news coverage.

Silva then worked in secrecy with Hollywood special effects shops and engineers from the General Electric Corporation to find or invent technology small and light enough to fit on a helicopter. He and his small team broadcast their first air to ground signal on July 28, 1958 to Los Angeles viewers who would eventually come to equate a helicopter news coverage with a high-speed police pursuits and the like.

In an interview with Smithsonian Air & Space Magazine, Silva said he came up with the idea while on the freeway. He explained that he was driving on the Hollywood Freeway one morning and when the idea came to him.

Silva told Air & Space that he never thought about being a pioneer. Rather all that he ever wanted to do was get KTLA News there and get the picture before the competition got it.

The Los Angeles Times reported Silva died in Camarillo, California, of Pneumonia complications. He was age 92. (RW)

**

WORLDBEAT: HISTORIC BLETCHLEY PARK GB2BP QRT

A historic amateur radio station is going QRT for good. Over the weekend of December 15th and 16th, station GB2BP will be making its final transmissions from the famed Bletchley Park estate in the United Kingdom.

Bletchley Park has been the home of GB2BP as well as serving as the location of its sponsor the Milton Keynes Amateur Radio Society for the past 18 years. But both are being forced to vacate the estate due to a change in its status to a museum. This will mean that it will have scheduled opening and closing times after which there will be no public access.

For those who are not aware of Bletchley Park's significance, during World War 2 it was the site of the United Kingdom's main message intercept center where ciphers and codes of several Axis countries were decrypted. The most important of these were the ciphers generated by the German Enigma and Lorenz machines. The work done there is generally

credited as one of the main reasons that the Allies won the war. While GB2BP may no longer be in full time residence on the Bletchley Park Estate it will re-appear occasionally as a special event station supporting public events at the new museum. (Southgate)

**

HAM RADIO IN SPACE: RUSSIAN HAM TO SPEND A YEAR IN SPACE:

Russian Cosmonaut Mikhail Kornienko, RN3BF, along with NASA Astronaut Scott Kelly have been chosen for a one-year long term assignment aboard the International Space Station. According to NASA, the mission will which will begin in 2015 will include collecting scientific data that will be important to the future of human exploration of our solar system. Also it should help researchers to understand better how the human body reacts and adapts to the harsh environment of space as NASA plans for missions around the Moon, to an asteroid and ultimately to Mars. (ARRL)

**

RADIO IN SPACE: VOYAGER 1 REACHING INTERSTELLAR SPACE

Researchers say that NASA's long-lived Voyager 1 which is heading out of the solar system, has reached what they call the magnetic highway leading to interstellar space

Voyager 1 will be the first manmade object to leave the solar system. Scientists believe the probe is currently in an area of deep space where the magnetic field lines from the sun are intersecting with magnetic fields from interstellar space. They believe that this phenomenon is causing highly energetic particles from distant supernova explosions and other cosmic events to zoom inside the solar system, while less-energetic solar particles exit.

The Voyager 1 probe was launched 35 years ago to study the outer planets. It is currently some 11 billion miles from Earth. At that distance, it takes radio signals traveling at the speed of light 17 hours to reach Earth.

Voyager 2 which is traveling on a different path out of the solar system has experienced similar, though more gradual changes in its environment than Voyager 1. Scientists do not believe Voyager 2, which is about 9 billion miles from Earth, has yet reached the magnetic highway to interstellar space. (Space Update)

ON THE AIR: N4D CELEBRATES ARRL PUERTO RICO STATE CONVENTION

On the air, the ARRL Puerto Rico State Convention operate special event station N4D from January 11th to the 25, 2013 to commemorate the first ever ARRL Convention to be held there. Frequency to listenout on are 14.250, 21.350 and 28.450 MHz on the High Frequency babds as wll as

locally on 147.550 MHz FM on 2 meters. More information on the convention and specialo event station N4D is on-line at www.arrlpr.org or by e-mail to wavilesjr (at) yahoo (dot) com. (ARRL Puerto Rico State Convention)

**

DX

In DX, DD0VR and DE3BWR will be active from Vietnam through January 4th as XV0VR. During their stay they also plan to operate from Cat Ba Island December 18th to the 20th and Phu Quoc Island from December 30th through January 2nd. QSL these operations via DD0VR.

JA7LU will be active from Phu Quoc Island, Vietnam January 12th to the 16 as XV4LU. He will be operational on 40 through 10 meters on SSB and RTTY. QSL direct only via home call,

KE4TG will be active as J38RF from Grenada between February 6th and March 8th. His primary interest is the Digital modes but he may operate some CW and SSB. QSL via his home callsign direct as listed at QRZ.com. His logs will be uploaded to Logbook of the World.

Lastly, several sources are reporting that a team of 10 operators will be active from Robinson Crusoe Island during mid-2013. It was also mentioned that this is the same group who activated D64K earlier this year. Look for more details to be forthcoming.

Above from various DX news sources,

**

SPACE AND THINGS: A STRANGE USE FOR A CUBESAT And finally this week, while hams and researchers look at the now venerable cubesats as communications and scientific research space platforms, a company in Scotland has come up with its own idea. How about space burials? No, we are not kidding as we hear from Amateur Radio Newsline's Cheryl Lasek, K9BIK.

--

A Glasgow based company called Alba Space is planning to use cubesats for just that. Burials of human remains in space.

According to the FAQ on the Alba Space website, the company will take a portion of ones cremated ash and integrate it into its spacecraft called the AlbaCube. It will then launch it skyward using a commercial service provider who takes it from Earth into space.

Why choose Space Burial over other forms of end off life celebration? Alba Space says that space is a place were only very few and very fortunate people have had the chance to venture. The company says that it wants to help make space become a place that is accessible to the public and enable those who have an interest in it to fulfill their

life's ambition to do so. It notes that after passing on that 75% of people in the United Kingdom get cremated and you have to do something with the ashes, so why not a ride into space.

Will this be a burial option only for the rich and famous? Not according to Alba Space. It says that while it has not yet launched its pricing options it is aiming for it to be competitively priced with other funeral options. This so the average consumer can afford to take part.

And if you will excuse a pun or two, this could be another fascinating use for the final frontier or the most extreme of extreme DX.

For the Amateur Radio Newsline, I'm Cheryl Lasek, K9BIK, in Zion, Illinois.

--

Alba Space says that it's still not sure when its space burial service might begin. It says that it's currently at its market research phase and are trying to gauge the demand for different services such as sub-orbital, low earth orbit and beyond. More about Alba Space's plans is on line at www.albaorbital.com. (Southgate)

Propagation Forecast Bulletin #50 de K7RA:

Posted: 14 Dec 2012 05:23 AM PST
http://www.eham.net/articles/29517

Average daily sunspot numbers fell 13.5 points this week from 61.1
to 47.6. Average daily solar flux was about the same this week as
last, rising 1.1 points to 102.7. Geomagnetic indices were even
quieter this week than last.

//
Volunteers Provide Key Emergency Communications:

Posted: 13 Dec 2012 04:11 PM PST
http://www.eham.net/articles/29514

Equipment allows emails to be sent using ham radios and battery-powered
computers: Ham radio operators in Powell River are a key part of the
region's emergency response system. Members of Powell River Amateur
Repeater Society and Powell River Amateur Radio Club volunteer to be part
of the emergency radio communication unit, which comes under the umbrella
of Powell River Regional Emergency Program (PRREP). A major disaster on the
West Coast would have the potential to knock out communications, including
telephone and Internet service. The unit would activate equipment kept in
an emergency communications trailer, which can be set up wherever an
Emergency Operations Centre (EOC) would be established. Both the Powell
River Regional District and City of Powell River have contributed funds for
equipment, as well as a grant from BC Gaming. The emergency radio
communications group, which has 10 regular members, is part of Emergency
Management BC (EMBC), said Russell Storry, emergency radio coordinator. "We
have identify cards and coverage through WorkSafeBC for a tasked event," he
explained. "We complement Emergency Social Services [ESS] and ground search
and rescue."

Catch the Geminids and Chat with NASA's Meteor Experts:

Posted: 13 Dec 2012 03:00 PM PST
http://www.eham.net/articles/29506

The annual Geminids meteor shower, scheduled to reach its peak on
December 13 and 14, is slated to be the most intense shower of the
entire year. This is also prime time for amateurs who enjoy bouncing
their VHF signals off the ionized trails of these space rocks as they
streak into our atmosphere. Known as meteor scatter, this communication
technique takes advantage of temporary radio pathways that can span
nearly 2000 miles. The week of December 10-16 is a good window for
Geminid watching, but the night of Thursday, December 13 is the
anticipated peak of the shower.

Revision: 1.2 2011/11/02 04:08:53
Posting-Frequency: posted twice monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team had decided to consider |
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. After a successful trial |
period (90 days, through early July 2009), we decided to adopt this |
change permanently. |

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.
```

Please direct any comments, questions, or criticisms to
rec-radio-amateur-moderated-request@panix.com.

SARL NEWS SUNDAY 16 December 2012

You are listening to ZS6SRL, the official radio station of the South African Radio League, the national body for amateur radio in South Africa. The SARL broadcasts a news bulletin every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream, visit www.sarl.org.za, click on 'Amateur Radio Today' and follow the links for details. For audio via Echolink, connect to ZS0JPL-R.

You can download this bulletin and previous ones from www.sarl.org.za and also subscribe there to receive future bulletins by e-mail.

Your newsreader this morning is (name), (call sign), on 145,725 from Pretoria, with relays on 7,066 MHz and 3,695 MHz SSB. (Other news readers change to suit).

SILENT KEYS

It is with regret that it must be announced that the keys of two radio amateurs became silent recently. They are:

Philip Conradie, ZS1CON, recently and Thys van Vollensteen, ZS6TVV, on the 11th December.

We extend our deepest sympathies to the relatives and friends of the deceased.

(PAUSE)

IN THE NEWS TODAY:

SARL ANTENNA DEFENCE FUND BREAKS THE R20 000 MARK

TWO SARL EXPERT WORKGROUPS TO MEET SECOND WEEK JANUARY

CONFRONTATIONAL WORLD CONFERENCE ON INTERNATIONAL TELECOMMUNICATIONS COULD AFFECT AMATEUR RADIO

SENIOR SCOUT ADVENTURE CELEBRATED WITH ZS9SSA

You are listening to ZS6SRL. Stay tuned for more details on these and other important and interesting items.

SARL ANTENNA DEFENCE FUND BREAKS THE R20 000 MARK

After only two weeks of the establishment of the SARL Antenna Defence Fund over R20 000 has been raised. Radio Amateurs and clubs have rallied to support the SARL's campaign to have building and zoning

regulations changed to enable radio amateurs to put up antenna structures under 15 metres without having to go through a lengthy process of applying for re-zoning and building approvals which are now required in most major centres of South Africa.

The target is to collect at least R50 000, this means that the campaign has thus far raised over 40% of the target. Thanks to radio amateurs and clubs who have made contributions to the fund. Full details on the campaign and a list of donors can be found on www.sarl.org.za, select Antenna Defence Fund from the left hand menu on the home page.

NOT A QUICK FIX

A campaign of this nature is a long process and requires the employment of various experts. The SARL under the leadership of the Legal Adviser, Johann Marais, ZS1JM, has already liaised with an attorney who is an expert in planning matters to develop the line SARL should take and what the approach should be. The holiday period is working against us as many professionals take their major leave this time of the year.

"We expect that the major thrust of the campaign will only take place after mid-January" said SARL President Rassie Erasmus. ZS1YT. "We will keep members informed through SARLNEWS, Newsletters and the web. If there was ever a time to join the SARL, the national body for amateur radio, then there is no better time than the present", he said. He thanked all who have contributed and said "I challenge all clubs and individual radio amateurs to make a contribution to the fund." The names of clubs who have to date contributed are listed on the ADF webpage.

TWO SARL EXPERT WORKGROUPS TO MEET SECOND WEEK JANUARY

The two SARL work groups, the Technology workgroup and the Regulatory work group will meet second week in January. The two groups are being formed to ensure that amateur radio remains in the forefront of SARL's focus.

The Technology workgroup will focus on new developments; interact with the various SABS technical committees to monitor the development of standards that may impact on amateur radio and keep the amateur radio community abreast of new developments. One of the immediate tasks will be to coordinate the proposed 5 MHz sharing and propagation research project.

The Regulatory workgroup will focus on various regulatory issues such as frequency allocations, environmental and zoning regulations and building standards as well as any other regulations that may impact on amateur radio.

After last week's announcement in SARL News, nominations have been received for the Regulatory Workgroup but no one has as yet come forward to join the technology workgroup.

Radio Amateurs with the expertise and/or interest in these or related fields and who are interested in joining one of the workgroups are invited to submit their names, background and contact details to the secretary of the SARL to secretary@sarl.org.za.

CONFRONTATIONAL WORLD CONFERENCE ON INTERNATIONAL TELECOMMUNICATIONS COULD AFFECT AMATEUR RADIO

A confrontational United Nations internet regulation treaty being discussed at a gathering in Dubai may impact on amateur radio operators. At the heart of the issue is the term operating agencies. Currently the international telecommunication regulations apply only to recognized operating agencies. This really means the large telecommunications operators in each country such as Telkom in South Africa.

News Line's Bill Pasternak explains that some countries want that term changed to just the term agencies. This would mean the International Telecommunications Regulations would become applicable to a vastly larger number of groups. So rather than just ATT, British Telecom or Italia Telecom or Telkom, the international treaty would then apply to entities such as Google, Facebook, Microsoft and eBay just to name a few. In reality, just about every Internet company, as well private network operators, leased-line operators, government agencies and even amateur radio operators would be included in this new definition.

But this idea is not sitting well with many developed nations. Opposed so far are the United States, Canada, Japan, Korea, Mexico, Poland and the pan-European CEPT and the Inter American Telecommunications Commission which is better known by the acronym Citel. On the other side in favour of the change are the Arab States, African States, Brazil, India, Philippines and several others.

In the meantime the entire conference risks grinding to a halt until this issue can be decided.

SENIOR SCOUT ADVENTURE CELEBRATED WITH ZS9SSA

The Senior Scout Adventure is well under way from Matjiesrivier, Cedarberg and uses the callsign ZS9SSA. The station is active on 80, 40, 20, 15, 10, and 6 m throughout the day until 21 December 2012. The base is hosting the scout patrols every evening at 17:00 and 20:00 CAT for around two hours. Amateur radio technologies are discussed and hands-on participation allows the scouts to work SSB, Morse and PSK digital modes from the base. All contacts will be confirmed with a special QSL card. The event is a collaboration between the Scouts and the SARL as part of a campaign to promote amateur radio to the youth. Various international scouts are participating in the events, and they are also now exposed to the brilliant world of technology and what South Africa has to offer.

ORDER YOUR BOOKS FOR CHRISTMAS NOW

The SA Amateur Radio Development Trust has a large number of ARRL books in stock. Details are available on www.amateurradio.org.za. SARL members qualify for a discounted rate. On the web site there are two order forms. If you an SARL member, download the SARL Member order form and you will see the discounts available. Currently the two most popular books are the 2013 Hard cover ARRL Handbook and the Hard cover Antenna Book. If you are planning to write the Radio Amateur Radio Examination in May next year, the ARRL Basic Radio is the ideal book to assist in your studies.

SARL OFFICE CLOSED

The SARL Office is closed for the Christmas and New Year period and will re-open on 7 January 2012. For any urgent matters only send an email to secretary@sarl.org.za. Please hold over any general administrative matters such as address change over till the office reopens in January.

CLUB AFFILIATION

The Zululand Amateur Radio Club and the Port Elizabeth Amateur Radio Society have also affiliated to the SARL. This brings the number of clubs affiliated to the SARL to 33. For a list af affiliated clubs, visit www.sarl.org.za/public/ClubTalk/default.asp.

NEW MEMBERS

The SARL welcomes the following persons as new members and wish them a long and fruitful association with the South African Radio League:
Andr&#65533; Shaw, ZS1AN Ivan Rossi ZSL1054 Johan Latsky ZSL1055

COMPETITION NEWS

Results of the PEARS HF DX CONTEST held 11th November 2012 for which only 4 logs were received:

General stations

1st ZS2DX 1 300 points 2nd ZS6PAM 527 points 3rd ZS2EC 108 points

Field Station

1st ZS2U 140 points

Overall winners 1st ZS2XD 2nd ZS6PAM

Congratulations to the winners in each category, your certificates will soon be forwarded to you.

Results of Digital Contest held on the 2nd December. Six logs were received.

1st - Noel Hammond, ZR6DX - 213 points 2nd - Dirk Els, - ZS6AKU - 147 points 3rd - Marius Snyman, ZR6MS -126 points

The combined results after the three digital contests are as follows:-

1st - Pierre van Deventer ZS6A - 890 points 2nd - Marius Snyman ZR6MS - 879 points 3rd - Brendon Muller ZS4BM - 522 points

Congratulations to Noel and Pierre.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. All four visible sunspot regions are stable.

If you want to do your own frequency predictions, the expected effective sunspot number for the week will be around 63.

All the bands from 20 to 10 m will provide lots of DX fun with 15 m providing the best openings with 20 m not far behind. There will also be frequent 10 m openings.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS 21 December - Last day to contact Senior Scout Adventure station ZS9SSA. 31 January 2013 - Last day for submission of nominations for councilors for the next term and motions for the 2013 AGM.

SARL News invites clubs and individuals to submit news items of interest to radio amateurs and short-wave listeners. Submit news items - if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp, not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to Amateur Radio Today every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area, with relays on 7 082, 7 205 and 17 760 kHz. There is also a podcast by ZS6RO. For a web-stream and Echolink by ZS6FCS, visit www.sarl.org.za, click on 'Amateur Radio Today', go down the green column and click on 'LISTEN ON THE WEB'. A repeat transmission can be heard on Mondays at 18:30 UTC on 4 895 kHz ((A new time and frequency!). Reception reports are invited. We are particularly interested in reports of the 4 895 kHz transmission on Mondays at 16:30 UTC as the frequency is close to the proposed new amateur allocation near 5 MHz. Reception reports from all areas in South Africa would be useful in our bid to ICASA for frequencies pilot studies. Send reports to artoday@sarl.org.za.

Sentech sponsors the transmissions on the non-amateur frequencies.

You have listened to a bulletin of the South African Radio League compiled by George Honiball, ZS6NE.

Thank you for listening, 73.

/EX

UK DX BPSK63 Contest 12-13 January 2013

Posted: 14 Dec 2012 06:52 PM PST
http://forums.qrz.com/showthread.php?372128-UK-DX-BPSK63-Contest-12-13-January-2013&goto=newpost

Dear Fellow Radio Amateurs,

The European PSK Club has the honour to invite the radio amateurs all over the world to participate in the UK DX BPSK63 Contest 2013. The objective of the contest is to establish as many BPSK63 contacts as possible between radio amateurs around the world and radio amateurs of the United Kingdom of Great Britain and Northern Ireland including all the British Overseas Territories and Crown Dependencies. Everybody can work everybody for QSO and multiplier credit. Since this year this contest is handled completely by the European PSK Club. We would like to invite you to take part in the contest, the rules and other information can be found at www.eupsk.com website. Please check the rules as there are important changes. It is strictly BPSK63 contest now, no other modes are allowed. The maximum output power is 100 watts. DXDA is a multiplier list now, and the rules themselves have been changed substantially. Please mark your diaries. In 2013 the new-style contest starts at 12:00 UTC on Saturday 12th January, 2013 and ends at 11:59 UTC on Sunday 13th January, 2013. All the very best to all of you and see you in the UK DX BPSK63 Contest 2013!

Another Way to Enjoy Meteor Showers: Ham Radio:

Posted: 14 Dec 2012 04:31 PM PST
http://www.eham.net/articles/29522

Tonight we should see the peak of this year's Geminid meteor shower. I wrote about the weird scientific mystery surrounding this particular meteor shower yesterday, and Miles O'Brien wrote a great feature on it for us today. In the comments on my post yesterday, reader Clayton Yarbrough mentioned that meteors have an effect on radio signals, and I wanted to follow up on that, because it's a pretty cool phenomenon. Basically, meteors can allow you to send radio signals farther than is normally possible. In the video above, you can watch 7th grader Jeffrey Kelly interview a ham radio operator who explains how this works. But first a little background. Radio waves travel through the air. You are, of course, aware of this. But there's also a limit to how far they can travel. Partly, this is because the radio waves move in what could be characterized as a straight line, but the planet Earth curves. To get around that bend in the horizon, ham operators frequently bounce their signals off a part of Earth's upper atmosphere, called the ionosphere. What makes the ionosphere special? It's ionized, meaning the particles it's made of are electrically charged. That should give you all the background you need to follow along with the video.

//
Interest is Buzzing in Amateur Radio:

Posted: 14 Dec 2012 04:31 PM PST
http://www.eham.net/articles/29521

In the day in age where you can check email on your phone. You can look at people while you're talking to them. You can basically do anything but brush your teeth with my phone. You might think amateur radio would be a thing of the past. You'd be wrong. Interest is actually growing. "Right now the number of amateur radio licenses is at a 10-year high and it's growing rapidly. There's tremendous interest," said Kevin Grantham, from the Dallas Amateur Radio Club.

110 Anniversary of Marconi W to E transmission

Posted: 14 Dec 2012 01:13 PM PST
http://forums.qrz.com/showthread.php?372086-110-Anniversary-of-Marconi-W-to-E-transmission&goto=newpost

II1M, VO1 and GB2M are on air celebrating first reception of West to East transatatlantic transmission in 1902 this weekend. GREAT! Any other stations on air to commemorate it? All CW?

http://oz6gh.byethost33.com/glace_bay.htm is the best technical info I can find out about the historical event, and it says it was on 182 kHz. I wonder what time it happened etc.. Can anybody give a link to more detail?

Personally I do not believe the 1901 claim of reception of S's on Signal Hill on about 850 kHz in daylight but applaud Marconi's belief and perseverence.

Andrew

Editor Tedd Mirgliotta, KB8NW
Provided by BARF80.ORG (Cleveland, Ohio)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AB5K & the AR TelNet Clusters Network, K1XN & GoList, NJ1Q & W1AW, KG2A, NG3K & ADXO, W3UR & The Daily DX, N4AA & QRZ DX, N4JF, KH6BZF, K8GI, K8YSE, W8BBQ, W8GEX & 60m News, WB8RFB, AT International, DK8JB & The DX News Letter, DL1SBF, DxCoffee.com, DX-World.Net, Emirates Amateur Radio Society, F5NQL, F6AJA & Les Nouvelles DX, I1JQJ/IK1ADH & 425 DX News, I2MQP & DX Italia News, IK1SOW, JG7PSJ, LZ1ZF, OZ6OM & 50 MHz DX News, Pete's DX-Newsdesk, RSGB IOTA Web Site, Sixitalia Weekly, VA3RJ & ICPO, the VHF-DX-Portal (MMMonVHF), VK2JI and XE1AO for the following DX information.

DXCC COUNTRY/ENTITY REPORT: According to the AR-Cluster Network for the week of Sunday, 9th-December, through Sunday, 16th-December there were 218 countries active. Countries available: 3A, 3B8, 3D2, 3DA, 3W, 4J, 4L, 4O, 4S, 4U1I, 4X, 5B, 5H, 5N, 5R, 5T, 5W, 5X, 5Z, 6W, 6Y, 7P, 7X, 8P, 8Q, 8R, 9A, 9G, 9H, 9J, 9K, 9M2, 9M6, 9Q, 9V, 9Y, A2, A4, A6, A7, A9, AP, BV, BY, C3, C6, CE, CE9, CM, CN, CP, CT, CT3, CU, CX, D2, D4, DL, DU, E5/s, E6, E7, EA, EA6, EA8, EA9, EI, EK, EL, ER, ES, ET, EU, EX, EY, F, FG, FH, FK, FM, FO, FR, FS, FY, G, GD, GI, GJ, GM, GU, GW, H4, HA, HB, HC, HC8, HI, HK, HL, HP, HR, HS, HV, HZ, I, IS, J2, J3, J6, J7, JA, JD/o, JT, JW, JX, JY, K, KG4, KH0, KH2, KH6, KL, KP2, KP4, LA, LU, LX, LY, LZ, OA, OD, OE, OH, OH0, OK, OM, ON, OX, OY, OZ, P2, P4, PA, PJ2, PJ4, PJ5, PJ7, PY, PY0F, PZ, R1FJ, S2, S5, S7, SM, SP, ST, SU, SV, SV/a, SV5, SV9, T7, T8, TA, TF, TG, TI, TJ, TK, TR, TT, TY, UA, UA2, UA9, UK, UN, UR, V2, V3, V4, V5, V6, V7, V8, VE, VK, VP2E, VP2V, VP5, VP8, VP8/h, VP9, VR, VU, XE, XU, XX9, YA, YB, YI, YL, YN, YO, YS, YU, YV, Z3, ZA, ZB, ZC4, ZD7, ZD9, ZF, ZL, ZP, ZS

* PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later" (WFWL).

7P, LESOTHO. Kiyo, JR1IZM, will be active as 7P8ZM from Maseru City as of December 15th until January 2013. Activity will be holiday style on 40-6 meters using CW, SSB and the Digital modes. He will probably

use an IC-7200 and Loop with ATU/AH-4. QSL via JO1CRA, direct or by the Bureau.

CARIBBEAN TOUR (Reminder/Update on Callsigns). Just a reminder that David, K3LP, will start activating the following Caribbean Islands this week during the month of December. Specifics of his activities are not known at this time, but it will be holiday style. His tentative schedule is as follows:
December 18-22nd - Callsign KP4/K3LP; San Juan, Puerto Rico
December 23rd - Callsign KP2/K3LP; St. Croix, U.S. Virgin Islands
December 24th - Callsign V44KAI (Joel's callsign and station from Basseterre, St. Kitts); Operator will be David/K3LP
December 25th - Callsign J73/K3LP; Roseau, Dominica
December 26th - Callsign J3/K3LP; St. George's, Grenada
December 28th - Callsign KP2/K3LP; Charlotte Amalie, St. Thomas, U.S. Virgin Islands
December 29-31st - Callsign KP4/K3LP; San Juan, Puerto Rico

Look for possible updates and more details at: http://www.k3lp.com

DXCC NEWS (DXCC Year End Reminder & Publication Dates). The following DXCC reminders were announced on the ARRL's Awards Blog page at: http://www.arrl.org/awards-blog
This is a reminder that the deadline for the 2012 DXCC Annual and Honor Roll listing of December 31, 2012, is rapidly approaching. In order to appear in these listings your submission must be postmarked by December 31, 2012. The current publication schedule for these lists is as follows:

2012 DXCC Annual Listing: This listing is scheduled for publication in the 2012 DXCC Yearbook. The 2012 DXCC Yearbook is scheduled for publication, electronically, in August 2013 QST. DXCC no longer sends the free copy as was done in past years since it is available, digitally, in QST now. A limited supply of paper editions of the yearbook, starting with 2011, are available for 8.00 USDs each (Includes postage). To appear in this list you must:
•Present a submission postmarked by December 31, 2012, AND your total on an active award category MUST increase by, at least, one point, or,

•Be current on the DXCC Honor Roll by December 31, 2012. (See Honor Roll listing requirements below under 2012 DXCC Honor Roll List). If you do not present a submission in 2012, but you are current on an Honor Roll category (Mixed, Phone, CW, Digital), only the active Honor Roll category will appear in the Yearbook.

2012 DXCC Honor Roll List: This listing is scheduled for publication in August 2013 QST. (Applicants Honor Roll standing must be current as of December 31, 2012. At present, there are 340 current entities on The ARRL DXCC List. Entry level Honor Roll is 331 current entities. Deleted entities do not count towards this award level). (eg: If you dropped below 331 current in 2012, you must make a submission with a new country to bring you back on the Honor Roll by December 31, 2012).

EI13, IRELAND (Special Event). "The Gathering... an Irish party, on and off the airwaves." Throughout 2013, Irish families and clans will be coming together in thousands of events, both on the island and around the globe, to celebrate their history and heritage in a unique event called "The Gathering". Irish amateur radio stations, North and South, will be participating and all operators throughout the world, whether they have some green Irish blood or not, are invited to join in the celebrations. The special event callsign EI13CLAN will be active throughout the year and there will be a variety of awards and other activities, details of which will be posted on the IRTS Web site at: http://www.irts.ie/thegathering QSL via Bureau or direct to the QSL Manager EI6AL at the following address: Silver Howe Sydenham Mews, Corrig Avenue Dunlaoghaire, Co Dublin IRELAND.

FG, GUADELOUPE. Jean-Pierre, F6ITD, will once again be active as FG/F6ITD from Guadeloupe and two islands between February 1st and March 25th (2013). Activity will be on SSB and the Digital modes. He plans to visit the following two islands in the IOTA NA-102 group: Basse Terre Island (February 1-8th) and La Desirade Island (February 9th-March 25th). QSL via his home callsign, by the Bureau or direct. Logs will be uploaded to ClubLog and LoTW. For more details, see: http://www.qrz.com/db/FGF6ITD

HI, DOMINICAN REPUBLIC. By the time you read this, Alex, RO5D, should be active as HI7/RO5D until December 25th. Activity will be on 20/15/10 meters and possibly 40 meters. QSL via RO5D.

IOTA NEWS.....
AS-021. Members of the Emirates Amateur Radio Society (EARS) will be active as A63HI from Hatab Island (Umm Al Hatab Island), U.A.E., between December 20-24th. Activity will be on all HF bands using CW, SSB and the Digital modes with two stations on the air. QSL via IZ8CLM. Visit the EARS Web page at:
http://www.ears.ae
Facebook:
http://www.facebook.com/Emirates.Amateur.Radio.Society.A62ER
Twitter : http://twitter.com/EarsA62a

EU-030. Tom, DL7UZO, will be active as 5P9Z from Bornholm Island (DIA BO-001, WLOTA 2203) between May 25th and June 1st (2013). Activity will be focused on 160 meters and the Digital modes, as well as all bands on CW. QSL via DL7UZO, direct or by the DARC Bureau. A Web page is available at: http://www.5p9z.com

JD1, OGASAWARA. Harry, JG7PSJ, will once again be active as JD1BMH from Chichijima Island (AS-031) between December 30th and January 4th (2013). Activity will be on 80-10 meters using CW, SSB and RTTY. QSL via the Bureau to JD1BMH or direct to JG7PSJ. Visit his Web page for more details at: http://sapphire.es.tohoku.ac.jp/jd1bmh

QSL SPECIAL EVENT STATION II1M via IQ1GJ or by the Bureau. Activity
is by the members of the A.R.I. section of Chivasso (Turin) which will
be active until December 22nd. Operations are to celebrate the 110th
anniversary of the first transatlantic radio message, on December 15,
1902, between Glace Bay in Canada and Poldhu in Great Britain.

7Z7AB QSL STATUS. It has been reported that QSLs for 7Z7AB (AS-190)
have been received from the printer and mailings were expected to
start going out on December 10th.

5W0W QSL STATUS. QSL Manager Rex, NR6M, reports that he has received
the picture for the 5W0W on December 9th, and plans to do the final
edits on the card before sending it off to Gennady, UX5UO, for printing.

LOTW'S NOW HAS DAILY AND HOURLY STATUS UPDATES! The ARRL's Web page
reports: "The ARRL has created a new informational page to issue daily
status updates and information of interest to the Logbook of The World
(LoTW) user community <http://www.arrl.org/logbook-of-the-world>.
These updates will include planned downtime and changes that will
impact LoTW operations. In addition, LoTW's processing queue is now
updated hourly <http://www.arrl.org/logbook-queue-status>, telling how
many logs and QSOs have been uploaded to the LoTW system and are awaiting

processing. New hardware that will improve LoTW's throughput is on order and is expected to be running in six to eight weeks."

T6LG QSL STATUS. Gosho, LZ1ZF, the T6LG QSL Manager, informs OPDX:
"Last months, I noticed a long delay of direct mail to U.S.A. • 6 to 8 weeks, while the ones sent to Japan and other DX destinations outside Europe arrive within 6 to 8 days. Many U.S.A. hams complain that they didn't received direct T6LG QSL, but it doesn't depends on me.
For example: QSL sent to W3YX on 10th of October 2012 (according to the stamp on the envelope) is received on 3rd of December 2012 • you can check it by asking Scott, W3YX, at: w3yx@aol.com
Please be patient waiting for direct T6LG QSL cards • I always send immediately a direct QSL back. 73's de Gosho, LZ1ZF"

QSL RECEIVED VIA LoTW: 5H1HS, C6AQQ, CO2JD, D3AA, DL4MCF, EL2A, EL2LF, EL2MF, GM5X, HB9BIN, HK3C, I6FLD, JA1NLX/VK4, JA7DOT, KL7RA, LP1H, LX0HQ, NH8S, PJ5DX, PT0S, RL9F, S51DX, VA2EW, VE2OJ, VE3CX, VE3JM, VE3KP, VP5T and YN2CC

QSLS RECEIVED VIA MAIL: 3V8BB, 3B9SP, 5T5BV, 7O6T, A31KJ, CT9/DG3FAW, D2QR, D64K, E77DX, EG5INT, EK6TA, EL2MF, LA/JH0CJH, NH8S, TT8TT, V21C, V63EPO, VK9XM, XX9THX, YN2CC, YV7/UA9YPS, Z60K and ZB2FK

QSLS RECEIVED VIA THE BUREAU: NONE REPORTED THIS WEEK!

SATELLITE ACTIVITY AND NEWS.....
* Omar, XE1AO, is now active as 6D0LM from Mexico (DK89df) until December 17th. The special callsign is to celebrate the 80th anniversary of "The Federacion Mexicana de Radioexperimentadores"(FMRE). QSL via XE1LM. Omar states he will use VO-52 and FO-29. His schedule for December 17th: VO-52 0158z and FO-29 0500z.

* Luci, 9A1Z, is looking to work North America stations on AO-7 Mode B on CW. If you are interested in working him, please send an E-mail to his QRZ.com address for a sked. He is in JN86.

S7, SEYCHELLES. By the time you read this, operators Tom/DL5NEN and XYL Claudia/DO5NEN will once again be active as S79NEN from Mahe (AF-024) and La Digue Islands (AF-024) until December 28th. Activity will be on 40-6 meters using CW, SSB, RTTY and PSK. QSL via DO5NEN. PLEASE NOTE: All donations will be transferred one by one to: http://www.unicef.org They state, "Please help us. DX for kids." There is a donate button on their QRZ.com page, as well as a ClubLog log search.

SPECIAL UK PREFIXES. It was announced in the RSGB magazine that all UK amateurs will be able to apply to use the special V prefix, such as GV, MV and 2V starting July 5th, 2012, until the end of the month of July. These special prefixes will use to celebrate 100th anniversary of the Radio Society of Great Britain (RSGB). Further details on this will be announced nearer to the time of the event.

T2, TUVALU (Update). Operators Rob/GM3YTS, Tom/GM4FDM, Gav/GM0GAV and Clive/GM3POI will be active as T2GM from Tuvalu between March 12-23rd

(2013). Activity will be focused on Europe. QSL via GM4FDM. The group now has a Web page available (but still under construction) at: http://t2gm.org

V2, ANTIGUA. Kei, KG2A/JJ1RJR will be active as V25A from Antigua (NA-100) between December 23-29th. Activity will be on 160-10 meters, including the 30/17/12 meter bands, and using CW and SSB. QSL direct only with SASE to KG2A. PLEASE NOTE: Kei informs OPDX that his callsign V25A is a reissued callsign. QSL ONLY TO KG2A and not to W9NJB listed on QRZ.com.

V2, ANTIGUA. Tom, AA9A, will be active once again from Antigua between February 11-20th. However, he will be using a new callsign V24A instead of V25AA. Activity should be on 160-10 meters, also 60 meters if there is a demand for it, using CW, SSB and possibly RTTY. QSL via his home callsign, by the Bureau or direct.

VO2, CANADA (ZONE 2). David, VE3AAQ, will be active as VO2AAA from the "Hams of Western Labrador" VO2WL club station in Labrador City, Labrador, in CQ Zone 2 between March 7-10th (2013). Activity will also include the RSGB Commonwealth Contest [BERU] (March 9-10th). QSL via VE3AAQ.

VP9, BERMUDA. Masa, K1GI, will be active as K1GI/VP9 from Bermuda between December 29th and January 2nd (2013). Activity will be on 160-10 meters using CW, SSB and the Digital modes. QSL via JG2BRI, direct, ClugLog's OQRS or LoTW. No Bureau.

VP9, BERMUDA. Kurt, W6PH, will once again be active as VP9/W6PH for the 2013 ARRL DX CW Contest (February 16-17th) as a Single-Op/All-Band/Low-Power entry, and the ARRL DX SSB Contest (March 2-3rd) as a Single-Op/ All-Band/Low-Power entry. QSL direct to his home callsign W6PH.

XV, VIETNAM. Members of the Lufthansa Amateur Radio Club will be active as XV2DLH from Mui Ne between February 15-26th (2013). Operators mentioned are Rudi/DK7PE, Juergen/DH6ICE, Juergen/DH0RAK, Bernhard/DK7TF and Zkrinko/ DK8ZZ. QSL via DK8ZZ. More details will be forthcoming.

ZL9, CAMPBELL ISLAND (Update). Ed, VK2JI, Publicity Officer for ZL9HR, reports [edited]: "The Hellenic Amateur Radio Association of Australia, ZL9HR team of ten Amateurs from around the world, arrived safely back on the New Zealand mainland on Tuesday, December 11th, having completed operations on Campbell Island in the early hours of Sunday morning December 9th (local time). On arrival back into New Zealand, the last of the log data was sent to the webmaster and the online log updated. The team of operators then set off back to their homes around the world with undoubtedly memories of a once-in-a-lifetime adventure.
High praise for the operation has been received by the pilots from Amateurs around the world and the question most often asked is 'where will the HARAOA team go next?' - we'll all have to wait a while before that question can be answered!
Putting on an expedition as big and as remote as this one costs a lot of money and it is not too late to make a small personal contribution to help with the costs if you wish to. This can be done at the website

<www.zl9hr.com>. Until the next one - 73 Ed, VK2JI, Publicity Officer
for ZL9HR."
From the log on their Web page, as of 1604z, December 8th, ZL9HR has
made a total of 42922 QSOs with 15487 Unique callsigns (26334/CW, 15279/
SSB, 1259/RTTY and 50/???). Breakdown by continent is: 263/AF, 0/AN,
5625/AS, 17194/EU, 16585/NA, 2121/OC and 1134/SA. Remember, QSL via EB7DX
direct, LoTW or use the OQRS for Bureau and direct requests. For more
information, visit their Web site at: http://www.campbell2012.com
ADDED NOTE: The ClubLog's "Online QSL Request System" (OQRS) is now
activated for those who wish to request their QSL cards electronically
at: http://www.clublog.org/expeditions.php

Irish Radio Transmitters Society
Radio News Bulletin
Sunday 16th December 2012

Silent Key

It is with the sincerest regret that we inform you of the death on Friday last of John Riordan EI6IJ. You will all recall that John very generously donated a car and some equipment to the Society a number of years ago when he could no longer drive. He also donated some valuable equipment to the Cork Radio Club where he got his first introduction to amateur radio. His funeral took place last week in Buncrana. We extend our sincerest sympathy to his family and friends. May he rest in peace.

Echo Ireland

Due to unforeseen circumstances, the next issue of Echo Ireland will not be published until early January. Deadline for inclusion is January 3rd. Your input would be greatly appreciated.

IRTS 80m Counties Contest 2013.

The date for the 2013 IRTS Winter 80m Counties Contest is Tuesday 1st January.

Check the rules at: www.irts.ie/cgi/showrules.cgi?80m Please notice Rule 4.4 and 4.5 and keep the portion of the band between 3.650 and 3.700 clear for non-contesters.

Also notice the change in Rule 10.1 which states Entries must be received by the Contest Manager not more than 14 days after the contest.

Small Beacon

We have just received news that a small beacon transmitting on 3574.5khz using 0.3watts. You can QSL using eQSL or direct .You can see diagrams and pictures as follows http://bit.ly/UHKPoO.

Coolmine Radio Rally

Coolmine rally will be held at the Coolmine Community School on Sunday 10th February 2013. Doors open at 8.30am for traders and for member of the public at 11.30am. Admission is 5.00. Usual traders will attend and there will be a bring and buy sale. Tea and refreshments available all day during the event. Unlimited free car parking available. To book a table for the rally please call the following: Tom, 01 8211043 or Tony, 087 2439997. Everyone welcome to this excellent annual event.

Opportunity for Young Ham Radio Operators

Amateur Radio Supplies in Haverhill, Massachusetts, USA have contacted us with news of a fantastic new program to support youth activity on the HF bands. They seek to help a few lucky young hams get on the HF bands and make some contacts! Do you know any deserving young hams? They will be giving away 3 complete HF stations per year in order to support activity on the ham bands. Full details can be found at the following link http://bit.ly/Pe9bWQ or by contacting Ger McNamara EI4GXB, IRTS Youth Coordinator.

Hurdy Gurdy Museum of Vintage Radio

The Hurdy Gurdy Museum now has a new website, following the following link http://bit.ly/QXkBTi.

DX News

Heli DD0VR will be QRV from Vietnam from 12 December until 4 January. He will use the callsign XV0VR from various locations during his stay including trips to Cat Ba Island (AS-132) from 18 - 20 December and Phu Quoc Island (AS-128) from 30 December - 2 January. QSLs go via his home call.

Sigi DF9FN will operate as H40FN from Temotu from 22 December - 7 January. Operation will be mainly on CW with some SSB. QSL manager is HA8DD.

Werner DC8QT will spend Christmas on the island of Mahe in the Seychelles. While there he will operate holiday-style as S79QT running 100w to a dipole. Relevant dates are 19 December - 7 January. QSL to his home call.

Finally - an unusual station. According to one of the three Mayan calendars the end of the world will occur on 21 December. To celebrate this once in a lifetime event a station signing N0D (November Zero Delta) or Now Zero Days will be active from 20 - 22 December. Obviously they are somewhat doubtful of being able to operate on the 22nd !!!!!!!! If the world survives QSLs will be available via KK5W. Have a look at the details on QRZ.COM

Items for inclusion in next week's Radio News can be submitted via e-mail to "newsteam /at/ irts / dot / ie" for automatic forwarding to both the radio and printed news services. Urgent news items for the radio news maybe telephoned to the radio news editor, Aidan, EI7JC on 085 7100511.

Please note that items for the radio news should reach the editor no later than midday on Thursday in order to be guaranteed inclusion in the following Sunday's bulletin.

Cuba to Spain on Amateur Radio Satellite FO-29:

Posted: 15 Dec 2012 04:26 PM PST
http://www.eham.net/articles/29524

Hector, CO6CBF reports on his successful transatlantic contact between Cuba and Spain using the amateur radio satellite FO-29. I am pleased to report that yesterday morning I had my first transatlantic contact on satellites. I worked EA4CYQ Juan Antonio in IM78cx. I had looked for intercontinental contacts before but it had been very hard for me. Now, running my new donated satellite gear I am able to work FO-29 until 0 degree in any direction. It was my third attempt and was successful! Cubans cannot operate on AO-7 mode B due to a 432MHz restriction in our country, so we have only a few chances on FO-29 every five months when the satellite is getting close to apogee. Juan Antonio and I had a two minutes window and we had enough time to interchange reports, grids and greetings.

//
Solar Activity Remains Quiet for Now, But New Group of Sunspots Emerging:

Posted: 15 Dec 2012 04:23 PM PST
http://www.eham.net/articles/29523

Solar activity has been relatively low over the past two weeks with not much in the way of sunspot activity, but scientists at NASA's Solar Dynamics Observatory are monitoring a new group of sunspots emerging over the sun's southeastern limb today. Over the next few days as this group of sunspots turns toward Earth, scientists will get a better idea on their potential for solar flares in the near future. A clearer view of their magnetic architecture will allow the folks at NASA to make better assessments. In the meantime, forecasters have increased the chance of an M-class eruption to 10% over the next day. This activity could increase significantly into next week.

2569. science fair radio kit 28-222 help needed

Newsgroup: rec.radio.amateur.misc
Date: 2012-12-17 01:16:35 UTC
From: clare@snyder.on.ca
Message-ID: <8jssc8t1se95c33ev7hppba64gdv3uf6jb@4ax.com>
Source record: 1236

I have an old Radio Shack? Science Fair Radio kit model 28-222 -
without instructions.

I need to know where to connect the entenna coil wires, the
speaker/headphone jack, and the battery. I have found points with W,
R, and G that look like the place to connect the red, green, and white
coil wires, but cannot figure out where the black goes. The speaker
connections and battery connections are a complete mystery..
Anyone have the instructions floating around or one you could send
pictures of? It's been sitting here uncompleted for a LONG time.

Attention GB2RS Newsreaders • not for reading out on the air.

You will see from the following script that there will be no GB2RS news on Sundays 23rd and 30th December.

Some news readers may, of course, wish to operate a news net on these days. If so, please ad-lib an

announcement as part of the first news story.

We thank all news readers for their dedication to the GB2RS News Service and wish you

a very Happy Christmas and a successful New Year.

Gordon L Adams, G3LEQ, GB2RS Manager

Elaine Richards, G4LFM, RadCom Editor

Giles Read, G1MFG, RadCom Technical Editor.

GB2RS NEWS

Sunday 16th December 2012 The news headlines:

* GB2RS News during the holiday season

* Bath Buildathon 2013

* Two new national societies join IARU

This is the last GB2RS broadcast of 2012. There will be no news readings on 23 or 30 December. But we will be back in the New Year, bringing you the all the latest amateur radio news. Transmissions re-start on Sunday 6 January. We would like to take this opportunity to send warm season's greetings to all our listeners and wish everyone a prosperous New Year. The RSGB HQ will close for the Christmas and New Year holiday at close of business on 21 December. It will re- open on 2 January. You will be pleased to know that the National Radio Centre at Bletchley Park will continue to be open on Thursdays, Saturdays and Sundays throughout December and January. We would like to thank those volunteers who continue to give their free time to keep the NRC open and on the air.

The 6th Bath Buildathon will take place on Saturday 12 January. The event will run from 9am to 5pm. Tea and coffee, supervision, tools and test equipment will be provided, but bring your own packed lunch. There is just one, or maybe two, places left for the main build, the 40m

Sudden Receiver kit from the G-QRP Club, and several places for the `absolute beginner' build, a medium wave receiver kit. Both are suitable for the Intermediate project assessment and the team will be running an Intermediate exam at the end of the day. The exam is open to anyone who has completed the practical assessments, or would finish them by doing the Buildathon. As a result of a generous donation, there are a few free places for young builders (under 18). Send an email nominating worthy youngsters to Steve Hartley via G0FUW@tiscali.co.uk. Steve can also supply booking forms for the Buildathon from the same email address.

The Federation of Radio Sport of Azerbaijan and the St Vincent and the Grenadines Amateur Radio Club, with 50 and 21 members respectively, are the two newest members of the International Amateur Radio Union. The IARU now has 164 members.

Following the recent news from Ofcom concerning 5MHz changes, the Autumn/Winter edition of The 5MHz Newsletter is now available in Google Drive Docs at http://tinyurl.com/cu3s3hx. This edition also includes latest news on the WRC15 5MHz Agenda item preparations, a Short Coaxial Antenna design for the band from John Pegler, G3ENI and the 5MHz beacon spot this time features GB3RAL.

Copyright © RSGB 2012. Not for public release before Monday 17 December 2012 except as a GB2RS broadcast. The 2012 edition of the ITU Radio Regulations, which includes the results of WRC-12, is now available at www.itu.int/pub/R-REG-RR-2012/en. The electronic version is free of charge, at least until mid-2014 as per ITU Council 2012's decision. You have to pay for the paper or DVD versions.

The January 2013 RadCom includes an article on a folding Yagi antenna for 2m. Unfortunately, due to an editorial error, the dimensions shown in the article are incorrect. A corrected version will be put on the RadCom Plus website as soon as possible and the corrections will also appear in the February RadCom.

Each year on 18 April, radio amateurs around the world celebrate World Amateur Radio Day. On that day in 1925 the International Amateur Radio Union was founded. In 1913, the first recorded instance of amateur radio being used to provide communications in a natural disaster, during severe flooding in the Midwest of the United States. Accordingly, the theme of the event for 2013 is Amateur Radio: Entering Its Second Century of Disaster Communications. Activities on the occasion of World Amateur Radio Day 2013 can be a great opportunity to spread the word about what amateurs are doing in the field of disaster communications in the 21st Century.

Peter Martinez, G3PLX is among those to receive the Yasme Excellence Award, given to those who have made a significant contribution to amateur radio. Peter, along with Pawel Jalocha, SP9VRC, received the award for the development of PSK31, a widely used digital mode entirely invented by amateurs that is enabling many amateurs to successfully use

HF with very modest stations.

And now for the details of rallies and events for the coming week

There are no more rallies taking place this year. The first rally of 2013 is the Red Rose Winter Rally on 13 January in the George H Carnell Leisure Centre.

Now for the news of special events

Ian, M0IAA will be operating GB1WH until 18 December. The station is on the air to raise awareness and funds for Wakefield hospital. Ian is hoping to work as many stations as possible. More details are on qrz.com.

Now for a special event station with a sense of humour. According to one of the three Mayan Calendars, the End of the World will occur on 21 December 2012. To celebrate this literally once in a lifetime event, Special Event Station N0D, Now Zero Days, will be activated for three days starting on 20 December. More information is available on the official N0D website, www.nowzerodays.com.

And now the DX news compiled from 425 DX News and other sources

DD0VR and DE3BWR will be active from Vietnam until 4 January as XV0VR. During their stay they also plan to operate from Cat Ba Island, IOTA reference AS-132, from 18 to 20 December and Phu Quoc Island, IOTA reference AS-12, from 30 December until 2 January. QSL these operations via DD0VR.

ZS6RI will be active from Lesotho for 20 weeks beginning on 17 December using the call 7P8RI. Operations will be on all HF bands using CW, SSB and the digital modes. QSL via details are at QRZ.com.

Ralph, H44RK will be active as 5W0KR from Apia, Samoa, IOTA reference OC-097, until 1 March. He will operate SSB and digital modes on the 10 to 20 metre bands. QSL via NR6M.

Norman, 5B4AIF will be active as E51E from Aitutaki, IOTA reference OC-083, South Cook Islands until 5 January. He will operate SSB and RTTY, and possibily some QRS CW, on the 6 to 160 metre bands. QSL via EB7DX and LoTW.

Copyright © RSGB 2012. Not for public release before Monday 17 December 2012 except as a GB2RS broadcast. Now the contest news

18 December sees the 1.3GHz UK Activity Contest takes place from 2000 to 2230UTC. Using all modes, the exchange is signal report, serial number and locator.

The Christmas Cumulatives take place between 26 and 29 December on the 6m to 70cm bands. To do well in this you'll need to be agile and alert, because to work as many as you can in two hours you need to keep hopping between the four bands. Running from 1400 to 1600UTC each day,

you can use all modes. The exchange is signal report, serial number and locator.

On 1 January the 144MHz UK Activity Contest takes place between 2000 and 2230UTC. Using all modes the exchange is signal report, serial number and locator.

The IRTS 80m Counties Contest takes place on New Year's Day, and it's held at a time of day when Ireland is eminently workable from Britain. It's an SSB-only or CW/SSB event with five sections and awards for the leading non-EI stations. Multipliers are all 32 Irish counties. Running from 1400 to 1700UTC the exchange is signal report and serial number.

The ARRL RTTY Roundup will be making the datamode portions of the HF bands busy on the weekend of 5 and 6 January. Activity is on all datamodes. In this event you can work everyone, but bear in mind that entrants are limited to operating no more than 24 of the 30 hours that run from 1800 to 2359UTC. There are low- and high-power categories for single- and multi-operator stations, but no single-band entries. Entrants are limited to a single transmitter, irrespective of section. Send a signal report and serial number. US stations will send a signal report and their 2-letter State code, while Canadian stations will send a signal report and their 3-letter Province code.

And now the solar factual data for the period from Friday the 7th to Thursday the 13th of December compiled by Neil Clarke, G0CAS on Friday the 14th of December.

A rather quiet week all round considering the active side of the Sun was looking our way and solar maximum is approaching. On some days only two sunspot regions were visible but this increased to four towards the end of the period. Solar activity was very low on the 8th and the 11th with no C class solar flares taking place and low on the rest of the days when only one C class solar flare took place each day. Solar flux levels increased slightly from 97 units on the 7th to 117 by the 13th. The average was 106 units. The 90 day solar flux average on the 13th was 119 units, that's one unit down on the previous week. X-ray flux levels averaged B1.7 units and varied little day to day. Geomagnetic activity was very low every day. The most disturbed days were the 9th and the 13th with an Ap index of only 3 units. The average was Ap 2 units. Solar wind data from the ACE spacecraft saw solar wind speeds vary between 260 and 340 kilometres per second. Particle densities were low except for a sharp rise to 80 particles per cubic centimetre early on the 9th. Bz showed only slight variation every day.

And finally the solar forecast for the coming week. Two `active regions' still on the far side of the Sun which are producing solar flares are expected to rotate into view. Therefore, this week solar activity is expected to be at low levels, however, activity could increase to moderate levels on some days depending on how active these regions are once they are in view. Solar flux levels could increase to the 130's. Geomagnetic activity is expected to be mostly quiet but

could increase after midweek. MUFs during daylight hours at equal latitudes should be around 24MHz for the south and 21MHz for the north. Darkness hour lows should be about 8MHz. The short but reliable winter sporadic-E season should take place during the Christmas and New Year period. This leads me on to thank all the organisations from where we receive solar data to produce these weekly reports and to wish them the best of Seasons Greetings. Also, the Propagation Studies Committee would like to wish all the staff at RSGB HQ, the GB2RS news readers and the listeners a peaceful Christmas and best DX for 2013. Finally, for those who would like to keep up to date with the latest solar events on a daily basis can do so by typing `spots and flares', as one word into your favourite search engine.

And that's all for this year from the propagation team.

Copyright © RSGB 2012. Not for public release before Monday 17 December 2012 except as a GB2RS broadcast.

Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies

can be found on the RSGB website, including email addresses

and website links where known.

[Note to Newsreaders: Please read the local news items appropriate to the service area of your transmission.]

NEWS FOR THE MIDLANDS Wythall Radio Club continues its regular Sunday 2m club nets on 145.225MHz FM from 2000 except for 30 December.

th On Tuesday 18 there is a Morse class and a talk on the Wythall Christmas Contest, which begins at 2000 on Monday

th 24th December. There are Friday shack socials as usual, and a Christmas fox hunt on Friday 28 at 10am. New Year's Eve sees a curry night at the Monsoon. On New Year's Day there's a free 'n' easy evening in the shack, plus the 144MHZ UKAC Contest from 2000. Details from Chris, G0EYO, on 07710 412 819.

Friskney and East Lincolnshire Communications Club is holding its club net on 144.165MHz USB, vertical polarization on Monday 17 December. On Wednesday 19th there is the M3+M6 club net on GB3FR, and the HF Net is on Friday 21st on 3.748MHz. GB2RS has no details of any future events, but information will be available on the FELCC Information Line on 07554 362 020.

Lincoln Short-Wave Club is holding a committee meeting on Monday 17 December. On Tuesday 18th they are taking part in the 1.3GHz UKAC from the shack. Wednesday 19th sees a formal meeting and Christmas quiz at the BSA Club. The normal pattern of nets continues on Thursdays over the Christmas period, as do the Saturday surgeries at the shack. The next actual meeting is on Wednesday 2 January, with G5FZ on the air in

the shack and a natter night at the BSA Club. For more information contact Pam Rose, G4STO, on 01427 788 356.

South Birmingham Radio Society is having a review of 2013 contests for 2013 on Monday 17 December. Tuesday 18th sees the regular coffee morning in the shack. On Friday 21st there is work in the shack, then the club is closed until the following Friday, 4 January, for shack and aerial work. Contact Mick Cleary, G7RRP, on 07595 696 359.

Derby & District Amateur Radio Society is holding its Christmas social evening on Tuesday 18 December. On Tuesday 1 January there's the New Year junk sale. Contact Richard Buckby, by email to radio@dadars.org.uk.

Loughborough & District Amateur Radio Club is having a Christmas drink at the Pied Bull on Tuesday 18 December. The next meeting is on Tuesday 8 January. More information from Chris, G1ETZ, on 01509 504 319.

Midland Amateur Radio Society is closed until Wednesday 9 January. Details from Norman, G8BHE, on 07808 078 003.

South Notts Amateur Radio Club is having a coffee and mince pies evening on Wednesday 19 December. They are taking part in the 2m contest on Tuesday 1 January, then the next meeting is on Wednesday 9 January. Contact Robin, G4NDM, on 01159 372 9423

Telford & District Amateur Radio Society is having a mince pie and mulled wine social on Wednesday 19 December. On 2 January GX3ZME is on the air and there's a committee meeting. Contact Mike, G3JKX, on 01952 299 677.

Bromsgrove & District Amateur Radio Club is holding its Christmas quiz on Friday 21 December. There's a review of the year on Friday 28 December, and the next meeting is on 11 January. Contact Chris, M0BQE on 01905 776 869.

Copyright © RSGB 2012. Not for public release before Monday 17 December 2012 except as a GB2RS broadcast. Coventry Amateur Radio Society is holding a curry night on Sunday 23 December. Tuesday 1 January sees the 1st round G2FDC 2m DF Trophy from 10am. On Friday 4 January there's a talk on getting knotted by G1ORG. Contact John, G8SEQ, on 07958 777 363.

Aldridge & Barr Beacon Amateur Radio Club is closed on Monday 17 December. Contact Albert, G0KFS, on 01922 614 169.

Gloucester Amateur Radio & Electronics Society is holding a Christmas buffet on Monday 17 December. Contact Anne, 2E1GKY, on 01242 699 595, daytime only please.

Worcester Radio Amateurs Association is running its Foundation course on Tuesday 18 December. Details from Rich Moles, M0UVA, via email to secretary@m0zoo.co.uk.

South Kesteven Amateur Radio Society runs its last club net of the year Wednesday 19 December on 145.525MHz from 2000. Contact Nigel, M0CVO, on 01476 402 550.

NEWS FOR THE NORTH OF ENGLAND There are still plenty of opportunities for clubs in Region 4 to take a turn operating the RSGB Centenary Special event station G100RSGB between 28 February and 25 March. Main details were published in the December and January RadCom. For more information, please contact RSGB Region 4 Regional Manager Harold Scrivens, G0UGE, via email to rm4@rsgb.org.uk, as soon as possible.

Now for advance notice that Star radio club is running Foundation and intermediate courses in January. Anyone wishing to participate should email Darren via starsradioclub@yahoo.co.uk or phone 07511 968 073.

Our club news listing for this broadcast covers the three weeks from today until Sunday 6 January. When clubs are closed over Christmas, the date of the next meeting is given, if known.

Angel of the North Amateur Radio Club is on the air on Monday 17 December. The next meeting is on Monday 7 January. Contact Nancy Bone, G7UUR, on 01914 770 036.

Sheffield Amateur Radio Club is holding its Christmas dinner on Monday 17 December at the Fairways, Birley. The next meeting is on Monday 7 January. More information from Peter Day, G3PHO, by email to sarc@g3pho.org.uk.

Workington and District Radio and IT Group is holding its Christmas dinner on Monday 17 December at the Fairways, Birley. The next meeting is on Monday 7 January. Details from Barry Easdon, G0RZI, on 01946 812 092.

Chester & District Radio Society is holding its Christmas social on Tuesday 18 December. The next meeting is on Tuesday 8 January. Contact Bruce Sutherland, M0CVP, on 01244 343 825.

Halifax & District Amateur Radio Society is holding a 'standards' evening on Tuesday 18 December. On Wednesday 2 January the club net is on 145.400MHz from 7.30pm. Details from Martin, M0GQB, on 01422 341 317.

Denby Dale Radio Club is holding its Christmas party on Wednesday 19 December at the Star Inn, Lockwood, from 8pm. Wednesday 2 January sees a club night. Details from Richard, M0RBG, on 07976 220 126.

Hornsea Amateur Radio Club is closed until Wednesday 9 January. Contact Gordon MacNaught, G3WOV, on 01377 240 573.

Mid-Cheshire Amateur Radio Society is having a beer & stew evening on Wednesday 19 December, and is closed on 26 December. Contact Peter Paul Fox, G8HAV, on 01606 553 401.

Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
10 - 16 December 2012

Solar activity was low. The largest flare of the period came from Region 1629 (N11, L=240, class/area=Dai/170 on 14 December), a C5/Sf 12/0727Z. Region 1630 (N19, L=253, class/area=Cai/90 on 11 December), also produced a C5 flare on 10/0558Z. The remainder of the period was dominated by infrequent, low-level C-class activity. No earth-directed coronal mass ejections were observed during the week.

A 10 MeV proton enhancement at geosynchronous orbit was observed on 14-15 December. 10 MeV particle flux was slightly elevated beginning around 14/0900Z. An eruption from the beyond the west limb, in the southern hemisphere, was visible in STEREO-A EUVI imagery beginning around 14/1200Z. 10 MeV flux began climbing more steeply around 14/2245Z, reaching a peak of 9.36 pfu at 15/0155Z, just below the S1 threshold of 10 pfu. Flux returned to normal levels over the course of the next two days.

The greater than 2 MeV electron flux at geosynchronous orbit was at normal levels throughout the week.

Geomagnetic field activity quiet all week. Solar wind speed at the ACE spacecraft ranged from around 270 km/s to the near 470 km/s while Bz was never less than -8 nT. A very weak shock was observed at the ACE spacecraft at 14/1852Z, and at GOES by 14/1946Z. Isolated unsettled to minor storm levels were subsequently observed at high latitudes mid-day on 15 and 16 December.

Forecast of Solar and Geomagnetic Activity
17 December - 12 January 2013

Solar activity is expected to be low with a slight chance for moderate activity through the forecast period.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at background levels except during 19-21 December when a high speed stream is expected to bring the flux to high levels.

Geomagnetic field activity is expected to begin the forecast period at unsettled levels with a slight chance for an active period on 17-18 December as a recurrent coronal hole high speed stream becomes geoeffective. The remainder of the forecast period is expected to be generally quiet barring any geoeffective coronal mass ejections.

http://forums.qrz.com/showthread.php?372311-Mont-Blanc-Expedition&goto=newpost

Hi,

hereby the link at our last HF expedition at almost 4.000mt over the sea.

Great experience!!! Clicking the link you can see a brief "trailer"...and
the friend of mine is saying that the whole video will be delivered when
the 400 contacts will be reached (now +300) :-) :-)

So I encourage to click our experience and...enjoy. Next spring we are
planning to climb on the Breitorn (aroud 4.500mt)...stay tuned & in touch!!

(equipment: Yaesu FT 857, automatic tuner SGC 237, antenna: 10mt vertical
with 20 thin copper radials, power: 17Ah AGM Battery)

Hard to Attract Young People to Join Amateur Radio Club:

Posted: 16 Dec 2012 04:03 PM PST
http://www.eham.net/articles/29527

KOTA SAMARAHAN: With the introduction of advanced technological gadgets such as smart phone, it has become a challenge for Amateur Radio Club Sarawak to continue attracting young blood to join the club. Admitting that amateur radio was a 'dying hobby' nowadays, its advisor Alan Ming Addie said on Friday that sustainability was the biggest issue faced by the club, which was established 18 years ago. The club has about 200 members. "It is indeed an uphill battle for us to get more young people to join the club. Many young people have joined the club, but they become inactive after leaving school. We feel there is a need to revive the hobby," he said when met prior to the opening of the 7th Borneo Amateur Radio Festival at the old campus of Universiti Malaysia Sarawak (Unimas) here. He pointed out that they had been working closely with schools through activities such as Jota (Jamboree On The Air) for Scouts as well as participating in engineering related workshops in universities by setting up roadshows to introduce amateur radio as a hobby to youngsters.

I'll punt on that one for now. That would appear to place it in a
category with the Federal Reserve.

> 2. The FCC has "power" over anyone operating (a specific legal term in

> Federal court order enforced by the US Marshal Service under the
> guidance of FCC personnel.

I won't litigate this with you, point by point. Suffice it to say
that what you have posted is mostly the self-serving posturing of the
FCC's internal legal staff. A well-funded, private sector plaintiff
employing a well-qualified law firm that has technical as well as
constitutional expertise would chop it up quickly and efficiently.

How often did you face an opposing counsel who could really afford to
put in the time and effort to win a case based on esoteric technical
issues that most lay juries could not follow. I was just looking at some
of the past "landmark" cases. Most of your victims in the more
theatrical cases were on shoestring budgets. The FCC has gained a

reputation as an effective "prosecutor" by carefully choosing weak and/or poor opponents. Were you involved in the Pacifica case? They can't afford to feed electricity to a transmitter, let alone put up a legal defense.

Some time back, the were some noises from the FCC to the effect that ownership of a garage door opener gave the FCC the right to warrantless entry into the owner's home, since it is a radio transmitter. When some private organizations and the media asked around Capitol Hill to see if anyone would support that claim, they were unable to find anyone in Congress who would. The issue has never been put to the test in court. You might want to verify that your old colleagues are still making that sort of bellicose claim. You have been retired for some time now.

> You are not a communications lawyer - don't try to play one.

I don't like your tone, Phil. You are no longer the legbreaker for a federal agency. Try to make the adjustment to private life.

2013 Yuma Hamfest & ARRL AZ State Convention

Posted: 17 Dec 2012 07:52 AM PST
http://forums.qrz.com/showthread.php?372388-2013-Yuma-Hamfest-amp-ARRL-AZ-State-Convention&goto=newpost

2013 Yuma Hamfest

The 2013 Yuma Hamfest, site of the ARRL Arizona State Convention, is Friday and Saturday, February 15-16, 2013 at the Yuma County Fairgrounds in Yuma, Arizona. Now in our ninth year and one of the largest hamfests in the Southwestern Division, the Yuma Hamfest is one of the few multi-day convention-style hamfests held in Arizona. And the weather is usually sunny and in the mid-70s!

We feature commercial exhibitors and vendors, tailgating, on-site RV camping, free parking, seminars held in parallel tracks in two separate buildings, amateur license testing, DXCC card checking, an antenna clinic & transmitter hunt, our famous ☐Buzzard BBQ☐ dinner, grand prizes worth well over $10,000, great hourly door prizes, a hospitality area, the "Country Store" consignment sales area, and much more.

Admission is only $5, tailgating spots are $10 for the weekend, and we offer a food concession run by a professional chef. Our now-famous ☐Buzzard BBQ☐ dinner is only $10 and has sold out for the last three years. We are giving away a Samsung Note 10.1 tablet as an admission prize to someone just for attending. Mark the third weekend of February on your calendar and plan on attending the Yuma Hamfest.

Date: February 15-16, 2013

Place: Yuma County Fairgrounds, 2520 E. 32nd Street, Yuma, AZ 85365, Yuma, Arizona

Amateur Radio Newsline☐ Report 1842 ☐ November 30 2012

Attention bulletin stations. Please note that this is an extended
Amateur Radio Newsline report and contains three breaks. Thank you.

Amateur Radio Newsline report number 1842 with a release date of
November 30, 2012 to follow in 5-4-3-2-1.

The following is a QST. The FCC issues a rule making proposal aimed at implementing the 2007 World Radiocommunications Accords; the NTSB says it wants to end all kinds of distracted driving; South Africa☐s ham radio community is told it will have to re-apply for their licenses and the 8th Global Amateur Radio Emergency Communications Conference is called a major success. Find out the details are on Amateur Radio Newsline☐ report number 1842 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: FCC PROPOSES IMPLEMENTING 2007 WRC ACCORDS

The FCC has issued ET Docket 12-338 that if passed as written is pretty
good news for ham radio. Bill Pasternak, WA6ITF, is in the newsroom with
the details:

--

ET Docket 12-338 released on Tuesday, November 20th proposes modify the
rules governing a number of communications services for amateur radio which
falls under Part 97 of its rules, the proposed changes are quite positive.

Starting at the low end of the electromagnetic spectrum and working our
way up, Docket 12-338 proposes the creation of a permanent albeit shared
allocation from 135.7-137.8 kHz with a power output of 1 watt effective
radiated power to an isotropic radiator. To those who have never heard the
term isotropic radiator, this is a theoretical point source of

electromagnetic waves that emits the same intensity of radiation in all directions. Translated into everyday language it really means hams will only be able to transmit a few hundred milliwatts of power if that.

Now going up a few hundred kilohertz to the 160 mter band. That where Docket 12-338 proposes to change the Amateur Radio Service allocation to make 1800 through 2000 kHz a primary amateur service allocation.

By way of background, historically, the 1715 to 2000 kHz band was allocated exclusively to the Amateur Service. In 1953, the FCC removed the 1715 to 1800 kHz segment from the Amateur Radio Service and allocated the 1800 to 2000 kHz band to the Amateur Service on a shared basis with the Radionavigation Service. Then in 1983, the FCC allocated the 1800 to 1900 kHz band to the Amateur Service on an exclusive basis and the 1900 to 2000 kHz band to the Radiolocation Service on a primary basis and to the Amateur Service on a secondary basis.

Lastly, in the WRC-07 Table Clean-Up Order, the FCC combined the 10 to 10.45 GHz and 10.45 to 10.5 GHz bands in the Federal Table of Allocations. In doing so, the frequency band was inadvertently not changed to 10 to 10.5 GHz. To fix this the FCC will revise the text of three footnotes that pertain to this spectrum by adding the existing Amateur-Satellite Service allocation to the list of permitted non-federal services. It will also order that non-federal stations in the Radiolocation Service not cause harmful interference to the Amateur Service in the 10 to 10.5 GHz band.

As we said, its pretty good news for ham radio here in the USA.

From the studio in Los Angeles, Im Bill Pasternak, WA6ITF.

--

If approved as written, these changes will implement allocation decisions from the 2007 World Radiocommunication Conference that concern those portions of the radio frequency spectrum between 108 MHz and 20.2 GHz by making specific updates to the rules in this frequency range. You can download the full text of ET Docket 12-338 at as a Word document at tinyurl.com/proposed-wrc-changes (FCC)

RADIO LAW: NTSB VS CEA ON DISTRACTED DRIVING AND DISTRACTED TRANSIT

The National Transportation Safety Board wants to eliminate all driver distraction and is broadening its focus on the use of portable electronic devices in all types of vehicles. The issue is part of the NTSB□s recently released □2013 Most Wanted List.□ Amateur Radio Newsline□s Norm Seeley, KI7UP, is here with the details:

--

While acknowledging that distracted driving didn□t begin when people began making calls or texting in the car, the National Transportation Safety Board still says that portable electronic devices that do not

directly support the task at hand have no place in any vehicles. This includes automobiles planes, trains, and just about any other vessel you might be able to think of. As such it argues that states and regulators can set the proper tone by banning the nonessential use of such devices in all areas of transportation.

The NTSB says that young drivers are more likely to use portable electronic devices while behind the wheel and therefore are especially at risk. It urges that laws, education, and enforcement efforts should place special emphasis on curbing the use of portable electronic devices by these younger drivers.

The NTSB goes on to say that companies should develop and vigorously enforce policies to eliminate distractions. It also says that manufacturers can assist by developing technology that disables these devices when in reach of operators.

But the NTSB has some strong opposition from the Consumer Electronics Association or CEA. That organization says that while it applauds the effort, it also notes that the NTSB misses the mark on the use of portable electronics in vehicles. It says that calling for an abstinence only approach, the NTSB ignores established realities of human behavior. It also claims that in-vehicle technology when used correctly can make for vastly safer roadways.

The CEA says that rather than calling for broad regulations or outright bans, policymakers should encourage the use of the many innovative driver safety technologies coming on to the marketplace. The CEA notes that it has already forwarded the NTSB a list of third-party applications that promote safe use of portable technologies in the automobile.

How any of this might affect mobile or even hand held pedestrian portable operations in the future by ham radio operators and other users of two-way radio is at this time unknown. But the NTSB stand seems to be that any and all forms of distraction must be removed from the public□s hands while in transit. And that□s not likely to sit well with the public at large.

For the Amateur Radio Newsline, I□m Norm Seeley, KI7UP. In Scottsdale, Arizona.

--

It should be noted that the National Transportation Safety Board is an independent body that has no authority to enact transportation policy, nor to force the federal government to make transportation policy changes. However it makes recommendations to governments, industry and the public and uses its □Most Wanted□ list as a way to highlight changes that it is advocating. (RW)

WORLDBEAT: ALL RADIO SOUTH AFRICAN AMATEURS WILL HAVE TO REAPPLY FOR THEIR LICENSES

All South African radio amateurs are going to have to reapply for their licenses. This is according to the South African Radio League which says its liaison committee met with that nation□s telecommunications regulatory body Independent Communications Authority of South Africa.

At that meeting the national society learned that following an audit by the Auditor General, that the communications regulator has been instructed to implement regulation 15 of the nations Radio Frequency Spectrum Regulations. This is a law that stipulates that an amateur radio license can only be renewed for up to five years after which a new application has to be submitted. Because of this, all South Africa licensed radio amateurs will be required to re-apply for a license for the period of April 1st 2013 through March 31st 2018.

The South Africa Radio League says that the details as to how this will be accomplished are expected to be made public in the next few weeks. Until that time, South African hams should do nothing. As soon as information is made available the South Africa Radio League announce it via its news bulletin service system and make forms available on its website at www.sarl.org.za. (SARL, ICASA)

110 Anniversary of Marconi W to E transmission

Posted: 14 Dec 2012 01:13 PM PST
http://forums.qrz.com/showthread.php?372086-110-Anniversary-of-Marconi-W-to-E-transmission&goto=newpost

II1M, VO1 and GB2M are on air celebrating first reception of West to East transatatlantic transmission in 1902 this weekend. GREAT! Any other stations on air to commemorate it? All CW?

http://oz6gh.byethost33.com/glace_bay.htm is the best technical info I can find out about the historical event, and it says it was on 182 kHz. I wonder what time it happened etc.. Can anybody give a link to more detail?

Personally I do not believe the 1901 claim of reception of S's on Signal Hill on about 850 kHz in daylight but applaud Marconi's belief and perseverence.

Andrew

Ham-In-A-Day Far Exceeds Expectations:

Posted: 17 Dec 2012 10:04 PM PST
http://www.eham.net/articles/29528

The "Ham in a Day" class hosted by the Warren County Department of Public Safety RACES (Radio Amateur Civil Emergency Service) at the Youngsville VFD this weekend was a huge success, according to Terry Carlson, Chief Telecommunicator for the Warren County 911 Center. The class was originally geared towards local Boy Scouts and Girl Scouts but developed into a statewide event with close to 120 participants. "Never in my wildest imagination did I think we would get that many people signed up in such a short amount of time," said Carlson. As testing began late afternoon on Saturday, more than 100 people had attended the class with an additional 15 people walking in to upgrade their licenses. "This is the largest event like this that I know of and definitely the largest Ham in a Day class to be held in Warren County," reported Carlson. In addition to the classes and the testing, participants took advantage of the chance to network with other amateur radio operators, enjoyed refreshments provided by the volunteers and support people, and had a chance to win over 80 door prizes at the lunchtime drawing.

The ARRL Contest Update

Published by the American Radio Relay League
*****************************************

December 19, 2012

Editor: Ward Silver, N0AX <rate-sheet@arrl.org>

==> IN THIS ISSUE

- Auld Lang Call Signs - Straight Key Night
- A Pot Full of Fun - Stew Perry Top Band Distance Challenge
- A Century of Signs
- The Best Engineer Jokes
- W9DXCC 2012 in Pictures
- Certificates In Your Christmas Sock
- Updated GAMMA Software by N6MW
- Your USA Source for Slicers
- Prestidigitation On A Winter's Solstice

NEW HF OPERATORS - THINGS TO DO

If you've never entered a 160 meter contest, you'll definitely want to
determine your grid square and give the Stew Perry contest a try. The
contest is scored by distance and power so even the little pistols can
do well. And before you step out for New Year's Eve, connect up a
straight key and pound a little brass on Straight Key Night or operate
in one of the several New Year's Day contests.

BULLETINS

A heartfelt year-end tip of the Contest Update cap to you and your
families as we close out 2012 and start a new calendar. May the year
2013 be a good one for us all!

The next edition of the Contest Update (Jan 2) will be somewhat
attenuated as your editor takes a bit of a break from wearing the
letters off yet another keyboard.

BUSTED QSOS

Jeff K8ND corrected my call sign error - Joerg, shown operating at PJ2T
is DF9LJ, not DL9FJ. Froeliche Weinachten, Joerg!

CONTEST SUMMARY
```

Complete information for all contests follows the Conversation section

Dec 22-23

- Lighthouse Christmas Lights QSO Party (Dec 21)
- RAEM Contest--CW
- SKCC Straight Key Sprint
- DARC XMAS Contest (Dec 26)

Dec 29-30

- NAQCC Milliwatt Sprint (Dec 27)
- Original QRP Contest--CW
- ARRL Straight Key Night (Jan 1)
- New Years Snowball Contest (Jan 1)
- SARTG New Year RTTY Contest (Jan 1)
- AGCW Happy New Year Contest--CW (Jan 1)

==> NEWS, PRESS RELEASES, AND GENERAL INTEREST

December 13 marked 100 years of Amateur Radio licensing, which began in 1912. Dave Sumner, K1ZZ, noted in the January 2012 QST editorial "It Seems to Us" that in the four months following the August 13, 1912 passage of the legislation, 1,185 amateur stations were licensed - just a small fraction of the number that were active at the time. We are well over 700,000 in the US now...for a quick tally of the current numbers check out AH0A's web site <http://www.ah0a.org/>.

The Reverse Beacon Network is good at showing where you can be heard but what about a tool for showing what you can hear from other places? Faros <http://www.dxatlas.com/Faros/> from Afreet Software (a.k.a. - Alex VE3NEA, creator of CW Skimmer and other software) checks reception of the NCDXF beacons <http://www.ncdxf.org/beacon/beaconschedule.html> from around the world and around the clock and on all the high bands. (Thanks, Chad WE9V)

Array Solutions <arraysolutions.com> has announced that both the 2500A (automatic tune) and 2500HF (manual tune) OM Power amplifiers were recently granted approval for sale in the USA by the FCC. (Thanks, Bob W5OV)

Does it seem like you are working a lot of dupes? It felt that way to Contest Log Analyzer <http://tinyurl.com/7xjxypc> author, Bob K0RC during the recent ARRL 160 Meter Contest. In response, he added a new worksheet to the analyzer that collects and displays the dupes in a log. "This year I had 978 entries in my log with 22 dupes, or about 2.2%. In 2011 there were 471 QSOs with 2 dupes (0.4%), and in 2010 there were 961 QSOs with 10 dupes (1.0%). So my logs do show the significant increase in dupes." Since there is no penalty for logging a duplicate contact in an electronic log, maybe the "dupe taboo" is being relaxed. If you do work a dupe - be sure to leave it in the log and help new contesters understand they should, too.

With the smartphone app becoming nearly ubiquitous, are there any Morse code training programs? Sure! Recommendations include Ham Morse, CWText, and Hot Paw. If anything on a smartphone is cool, then morsing must also be, correct? (Thanks, Julio AK4VL and Tom WB8WOR)

There are many Morse training programs such as the ARRL's training CD <http://www.arrl.org/shop/Your-Introduction-to-Morse-Code-audio-CDs/> that uses the Koch method of sending fast characters with lots of spacing or IK0YGJ's Zen and the Art of Radio Telegraphy <http://www.qsl.net/ik0ygj/enu/index.html>. Phil W0XI has a CW practice resource page <http://www.4sqrp.com/resource/w0xi/w0xi-100/most_common.html> and groups like SKCC <http://www.skccgroup.com/>, FISTS <http://www.fists.org/>, and CWops <http://www.cwops.org/>offer lots of information and help! (Thanks, Jay W5JAY and Terry WA0ITP)

Web Site of the Week - Who says engineers can't have a little fun with themselves? This EDN website <http://www.edn.com/design/diy/4376812/5-great-jokes-about-engineers?cid=EDNToday> collected quite a few of my favorite engineer jokes and a couple that I hadn't heard. Good for a holiday chuckle by you and your friends!

WORD TO THE WISE

The white noise that you hear on an empty frequency is the transmissions of all the hams who have gone before us. (Relayed by Sean N7OUW)

==> SIGHTS AND SOUNDS

Two sets of photos <http://w9dxcc.com/photos.html> from 2012 W9DXCC by Ben K9IDQ have been added to the W9DXCC web site Photo Gallery. (Thanks, Randy K9OR)

There is a wealth of information in the webinars archived on the Potomac Valley Radio Club <http://www.pvrc.org/webinar/webinars.htm> and World Wide Radio Operators Foundation <http://www.wwrof.org/> websites. Watch for new webinars being announced and added!

==> RESULTS AND RECORDS

☐Single-Operator certificates for the 2011 ARRL 10 Meter Contest - all 1,078 of them - have finally been processed. The Multi-op certificates are being processed and will be followed by the 2012 RTTY Roundup certificates and plaques. (Thanks, ARRL Contest Branch Manager, Sean KX9X)

The results for the PreStew <http://www.kkn.net/stew> event from October are now posted. Many thanks to the 200+ people who sent in their log. (Thanks, Tree N6TR)

The CW OPEN results <http://cwops.org/cwo2012-final.html> are now online. Al AD6E reports, "Looks like the next CW OPEN will be Sept 7 beginning with the first session at 0000-0359Z. This change of times is aimed to increase participation in both Europe and Asia. As before, all

parts of the world will have two "good" sessions during the day/evening and one "bad" session in the middle of the night."

OPERATING TIP

This week's tips involve ways to be more effective when operating SO2R (Single-Op, Two Radios):

- Set the CW sidetone pitches to be a little different on the two radios. (Thanks, Glenn K6NA)
- Glue a small micro-switch to the keyboard, paralleled with the foot switch. It can also be configured as a SO2R receive focus switch for non-SSB contests. (Thanks, Kirk K4RO)
- To hear the sidetone from an external keyer, run a wire from the keyer speaker, through a resistor, and tee it into the headphone connector. (Thanks, Steve N2IC)

==> TECHNICAL TOPICS AND INFORMATION

Bill Wortman N6MW has reworked the GAMMA program provided as a supplement to the Antenna Book <http://www.arrl.org/antenna-book-reference> and that is useful to readers of the ARRL Handbook <http://www.arrl.org/arrl-handbook-reference> andLow-Band DXing by ON4UN <http://www.arrl.org/shop/ON4UN-s-Low-Band-DXing>, as well. The previous version of GAMMA failed to find solutions to the calculations when the when the combination of the desired feed line impedance exceeds the product of the raw antenna resistance and the gamma step-up value. Bill's new code fixes that problem and can be found on the Antenna Book and ARRL Handbook web pages as a compressed "zip" file. The ARRL extends its thanks to N6WM for his contribution, as well as to Greg Ordy W8WWV for making some tests of the code.

A terrific book on batteries, "Batteries in a Portable World <http://www.arrl.org/shop/Batteries-in-a-Portable-World/>" by Cadex CEO Isidor Buchmann, is in stock at the ARRL Store. Buchmann also started the popular Battery University <http://www.batteryuniversity.com/> website which has a wealth of information about the use and care of batteries.

Crank-up towers often squeak and squall when being lowered or raised and sometimes when flexing from the wind. Spencer K5GAK says he "solved that problem with some bicycle dry Teflon lube from one of the online bike shops. It goes on as a liquid and the solvent evaporates leaving a Teflon coating."

Sometimes relay contacts that handle received signals (such as transmit-receive relays) develop thin films of oxide or other material that present a high resistance to low voltage signals. (Higher voltages punch right through the film and clear the resistance.) Tom W8JI has published a contact cleaning procedure <http://www.w8ji.com/relay_cleaning_and_life.htm> that may help you clear up an intermittent receive problem caused by a relay contact.

Dennis N6KI noticed this locking power plug <http://www.familysafe.com/powerstop_power_plug_lock.html> that might be useful in securing your station or preventing unauthorized (or unwise) energizing of a piece of gear.

VE7BQH's tables of antenna performance <http://www.bigskyspaces.com/w7gj/6mTable.htm> for 6 meters, 2 meters, and 70 cm are now updated on the web site of Lance W7GJ. (The link is about halfway down the page.) The tables are now in spreadsheet (Excel) format with the band listings on individual worksheets.

Want to make your own radar from "stone knives and bearskins"? The November 2012 IEEE Spectrum article "Coffee-Can Radar <http://spectrum.ieee.org/geek-life/hands-on/coffeecan-radar>" shows how, using a laptop for the computational horsepower. A video <spectrum.ieee.org/diyradar1112> describing the project is also available.

The art store is always a fertile place for the imagination and the workbench. A note in The Canadian Amateur by VE3DCU points out that painting panels <http://ampersandart.com/> for artists (a simple wood frame with a paintable hardboard panel) can be used for simple circuits that don't require a shielded enclosure.

What has KB9YIG, purveyor of the SoftRock SDR kits been up to? He's still pumping out designs <http://fivedash.com/index.php?main_page=product_info&cPath=1&products_id=5>. The time has never been better to try an SDR radio!

Night Fire Electronics <http://vakits.com/> is a recent entry into the kits and parts scene. Along with a wide selection of electronic products, their component collections and prototyping boards are very useful.

This simple and artistic Instructables knife-holder project <http://www.instructables.com/id/Universal-Knife-Block-Design-Martin-Robitsch/> is adaptable to holding all manner of small tools and can act as a third-hand during assembly and soldering. Who says the workbench can't look good as well as be functional?

Technical Web Site of the Week - Does anyone make variable capacitors these days? Yes and right here in Ohio! Oren Elliott Products <http://www.orenelliottproducts.com/> is the primary supplier of "bread slicer" capacitors in the USA. There are a wide variety of values and voltages available as the graphic above illustrates. They also make variable inductors and planetary reduction drives. (Thanks, Carl KM1H)

==> CONVERSATION

Prestidigitation On A Winter's Solstice

A small quasi-literary offering from the N0AX archives to my many readers at the end of 2012. Keep it magical!

This quiet eve with all asleep
The time has come alone to keep
My schedule

Without a station's sign at hand
I simply tune across the band
To listen

Detecting falls of frozen flake
Faint cracklings distant nimbus make
Their message

This window onto blackest night
Envisioned through electric sight
Of wireless

A station under sun or star
>From key or voice or touch afar
Is calling

Waves fly beyond to skybound plane
Yet gently bent to ground again
The signal

Whose fields my silent wires find
Imperatives electrons mind
In current

Miniscule yet well received
A miracle by me perceived
As magic

73, Ward N0AX

==> CONTESTS

19 Dec 2012 through 1 Jan 2013

An expanded, downloadable version of QST's Contest Corral in PDF format <http://www.arrl.org/contest-calendar> is available. Check the sponsor's Web site for information on operating time restrictions and other instructions.

HF CONTESTS

Lighthouse Christmas Lights QSO Party--Phone,CW,Digital, from Dec 21, 0001Z to Jan 8, 2359Z. Bands (MHz): 1.8-28, 50,144. Exchange: Serial or ARLHS number. Logs due: Jan 31. Rules <http://arlhs.com/>

RAEM Contest--CW, from Dec 23, 0000Z to Dec 23, 1200Z. Bands (MHz): 3.5-28. Exchange: Serial and lat/long in degrees. Logs due: Jan 25. Rules <http://raem.srr.ru/>

SKCC Straight Key Sprint--CW, from Dec 26, 0000Z to Dec 26, 0200Z. Monthly on the 4th Wednesday UTC. Bands (MHz): 1.8-28, 50. Exchange: RST, S/P/C, name, SKCC nr or power. Logs due: 5 days. Rules

<http://www.skccgroup.com/>

DARC XMAS Contest--Phone,CW, from Dec 26, 0830Z to Dec 26, 1059Z. Bands (MHz): 3.5-7. Exchange: RS(T) and DOK or special station code. Logs due: 3 weeks. Rules <http://www.darc.de/referate/dx/contest/xmas/en>

NAQCC Milliwatt Sprint--CW, from Dec 27, 0130Z to Dec 27, 0330Z. Bands (MHz): 3.5-14. Exchange: RST, S/P/C, and NAQCC mbr nr or power. Logs due: 4 days. Rules <http://naqcc.info/>

Original QRP Contest--CW, from Dec 29, 1500Z to Dec 30, 1500Z. Bands (MHz): 3.5-14. Exchange: RST, serial, and category. Logs due: Jan 31. Rules <http://www.qrpcc.de/contestrules/hotr.html>

New Year's Eve and New Year's Day Contests

ARRL Straight Key Night--CW, from Jan 1, 0000Z to Jan 1, 2400Z. Bands (MHz): 3.5-28, 50+. Exchange: General QSO information. Logs due: Jan 31. Rules <http://www.arrl.org/straight-key-night>

New Years Snowball Contest--Phone,CW, from Jan 1, 0000Z to Jan 1, 0100Z. Bands (MHz): 3.5. Exchange: RST, serial, AGB number. Logs due: 3 weeks. Rules <http://ev5agb.com/index.htm>

SARTG New Year RTTY Contest--Digital, from Jan 1, 0800Z to Jan 1, 1100Z. Bands (MHz): 3.5-7. Exchange: RST, serial, Happy New Year in your language. Logs due: Jan 31. Rules <http://www.sartg.com/>

AGCW Happy New Year Contest--CW, from Jan 1, 0900Z to Jan 1, 1200Z. Bands (MHz): 3.5-14. Exchange: RST, serial, AGCW number. Logs due: Jan 31. Rules <http://www.agcw.de/>

VHF+ CONTESTS

Lighthouse Christmas Lights QSO Party--Phone,CW,Digital, from Dec 21, 0001Z to Jan 8, 2359Z. Bands (MHz): 1.8-28, 50,144. Exchange: Serial or ARLHS number. Logs due: Jan 31. Rules <http://arlhs.com/>

SKCC Straight Key Sprint--CW, from Dec 26, 0000Z to Dec 26, 0200Z. Monthly on the 4th Wednesday UTC. Bands (MHz): 1.8-28, 50. Exchange: RST, S/P/C, name, SKCC nr or power. Logs due: 5 days. Rules <http://www.skccgroup.com/>

ARRL Straight Key Night--CW, from Jan 1, 0000Z to Jan 1, 2400Z. Bands (MHz): 3.5-28, 50+. Exchange: General QSO information. Logs due: Jan 31. Rules <http://www.arrl.org/straight-key-night>

==> HURRICANE CENTER STATION ACTIVE ON SKYWARN RECOGNITION DAY

WX4NHC <http://www2.fiu.edu/orgs/w4ehw/>, the Amateur Radio station at
the National Hurricane Center <http://www.nhc.noaa.gov/> in Miami,
Florida, was activated on Saturday, December 1, for SKYWARN Recognition
Day, a nationwide event. Julio Ripoll, WD4R, Assistant Coordinator for
the station, said "This was an excellent on-the-air event to practice
our radio skills and exchange basic weather data over ham radio between
NWS forecast offices and volunteer SKYWARN spotters. We tested our
equipment, antennas, computers and several modes of communications that
are used to gather surface eye witness reports during severe weather
events including, of course, hurricanes." Ripoll said that "this was
also a good opportunity to train new operators on equipment and
procedures, and interface with NWS staff that may not be familiar with
the capabilities of Amateur Radio communications."

"Even though HF propagation was poor from our location in south
Florida, WX4NHC operators were able to make a total of 122 contacts --
70 on HF, VHF and UHF frequencies, and 52 on EchoLink and IRLP,"
reported Ripoll. "We made direct contact with 24 NWS offices
nationwide. The farthest station contacted was in Estonia where it was
-1? C with light snow. The coldest weather report received was 18? F
```

from Turner, Maine. The warmest weather report received was 82° F from Brownsville, Texas. The most unique report was "Volcanic Haze" from Honolulu, Hawaii." Ripoll offered special thanks to the VoIP Hurricane Net <http://www.voipwx.net/> team operating from NWS Taunton, Massachusetts, for sponsoring the net on EchoLink/IRLP.

==> HURRICANE SANDY SPAWNS LESSONS LEARNED FOR CONNECTICUT ARES

In last month's issue, Connecticut Section Manager Betsey Doane, K1EIC, reported on her section's comprehensive deployment for massive storm Sandy. This month, her Section Emergency Coordinator Wayne Gronlund, N1CLV, offers his perspective on lessons learned from the event:

The old adage that "a disaster is not the time to be exchanging business cards" was validated. In areas where strong relationships had been previously developed with our served agencies (Red Cross, Connecticut Department of Emergency Management and Homeland Security, and municipal governments), requests for Amateur Radio assistance in shelters and at EOCs were quickly and effectively handled at the local level. In those areas where ARES/SKYWARN officials exercised active/strong leadership and were proactive in offering and providing Amateur Radio support, there were a lot of useful and productive assignments available to our volunteers.

The five regional DECs and the SKYWARN DEC (or their designated representatives) participated in statewide SEC nets conducted every two hours. The SEC net gave me a good feel for where things were going well and where they were not. Section Manager Doane was an active participant and helped me to identify and address any issues in our response.

VHF/UHF frequencies (both repeater and simplex) provided the primary platform for our disaster response and emergency communications needs. During the widespread power outages, many of our repeater systems shifted to emergency power and continued to function. Repeater owners and control operators did an extraordinary job of keeping us on the air. The KB1AEV linked system in particular remained viable and provided coverage for approximately 80% of the state. Many of the facilities where we rendered assistance would not easily accommodate deployment of HF antennas.

Areas for Improvement

A significant number of our volunteers are affiliated with both ARES/SKYWARN and the Red Cross (and to some extent, other volunteer groups who provide disaster support). Depending on the nature of the incident, volunteers may choose to assist one of the other non-governmental organizations (NGOs) whom they support rather than ARES/SKYWARN. This "double counting" of resources creates a shortfall in the numbers of operators expected to be available to help.

Getting more ARES/SKYWARN leaders at all levels (ASEC/DEC/ADEC/EC/AEC) to exercise what we in the Coast Guard call "trained initiative" would

improve our effectiveness when communications up/down the chain of command are difficult or not readily available. Those leadership officials with local situational awareness who know what needs to be done and how to get it done right without being told do so, could help to decentralize control and make the entire organization more responsive. Note: this is NOT suggesting self-deployment of ARES/SKYWARN members, but rather leadership being exercised at the lowest levels of the organization. -- Wayne Gronlund, N1CLV, Connecticut Section Emergency Coordinator

==> SUPER TYPHOON BOPHA: HAMS RESPOND WITH COMMUNICATIONS SUPPORT

Typhoon Bopha (local name Pablo), a Category 5 super storm, hit the Philippines on December 3 uprooting trees, downing power lines, sparking landslides and driving 40,000 people to head for shelters. It was the strongest of about 20 typhoons to affect the country this year with its heavy rain and wind gusting up to 210 km/h as it came ashore at Mindanao. It was the strongest typhoon to ever hit the southern island. More than 600 died.

The Philippine Amateur Radio Association (PARA) had its ham emergency radio operations (HERO) program working when the typhoon struck. PARA used all available means of communication including HF radio (7.095 MHz), VHF radio (144.740 MHz), the Internet and social media such as Facebook, e-mail, and EchoLink to monitor the situation and give updates to all concerned as necessary.

RADNET 5, a local club of Amateur Radio operators in Tacloban City, provided the city with vital communications links and was in constant coordination with the City Disaster Risk Reduction Management Council (CDRRMC). 5700 families were evacuated from Saint Bernard. RADNET 5 also assisted the Red Cross in Tacloban and Saint Bernard. The City Government of Tacloban City used the Tacloban Convention Center as one of its evacuation points.

Operations and relief proceeded well with planning and preparations, the cooperation of evacuees and the mammoth response and recovery efforts. -- Jim Linton, VK3PC, Chairman, IARU Region 3 Disaster Communications Committee, with Philippines Amateur Radio Association Chief Operating Officer Eddie Valdez, DU1EV

==> GAREC-2012 A WRAP

The eighth Global Amateur Radio Emergency Communications Conference, GAREC-2012, took place in Port Dickson, Malaysia, November 12-14, hosted by the Malaysian Amateur Radio Transmitters Society and was attended by 17 delegates from nine countries. The theme of the conference was "One world, One commitment." In 2005, the first Global Amateur Radio Emergency Communications (GAREC) Conference was organized on the initiative of Seppo Sisatto, OH1VR, in Tampere, Finland. Following the success of this event and the increased interest in international and regional cooperation on the function of emergency

communications, GAREC conferences were established as annual events.

For the Malaysia conference last month, presentations were received on the mobile emergency weather system, which provides a means for citizens to assist authorities with weather reports using simple equipment and training, augmented by the amateur service.

The status of the Amateur Radio Emergency Service provisions in Finland, Hong Kong, Indonesia, Germany and Switzerland was discussed, which highlighted the differences and similarities in approaches to emergency planning by the respective countries, directed to meeting the needs of their peoples. The Swiss delegation presented their procedure for a special net control protocol, which provided more efficient message handling when the volume of messages increases beyond the needs of a simple net.

The conferees considered the common issues facing Amateur Radio emergency communicators, and recognized that while solutions may not be easy to find, sharing the problems and allowing individual countries to realize that they were not alone provides valuable support to the global Amateur Radio emergency and disaster relief community.

Conferees participated in two exercises, the first a directed exercise where they were asked to work together as a team, providing emergency communications for a fictional country and event. This encouraged the delegates to consider what their ideal network and licensing environment would look like as well as enhance interpersonal relationships helping them to work together more efficiently in the future.

The IARU HF Emergency Operating Procedure <http://www.dx.ardi.lv/emerg-ww.pdf> was reviewed following the experience of use in GlobalSET and national exercises. A number of opportunities were identified to improve the procedure and these will be developed by the delegates for presentation to the IARU Regional Emergency Coordinators (EMCOR).

The titles of "GAREC" and the "Global Centre of Emergency Frequencies <http://www.iaru.org/uploads/1/3/0/7/13073366/emergencycenterofactivityfrequencies.pdf>" (CoA frequencies) can be misinterpreted as only referring to "Global" emergencies, concluded the conferees. This is not the case, they said. "The Conference and CoA frequencies are available for all emergency communicators around the world to share their knowledge to assist their colleagues who are having problems themselves."

There was a discussion on how GAREC and emergency communications should be branded to allow more exposure to served agencies and the public we also serve: "All emergency communications groups are encouraged to share information on all emergencies they are asked to assist with so that our public profile is raised and understanding of our service improved."

It was discovered that four countries were independently looking at the issue of monitoring the CoA frequencies to allow the alert to be raised for a disaster or emergency in an automatic manner: "It would obviously be better for those countries to collaborate on establishing a standard solution. The continuation of GAREC as a forum to share ideas and plans may prevent duplicate efforts in the future."

There was increased understanding of the restrictions placed on radio amateurs in different countries in the context of emergency response.

The delegates suggested that future conferences seek to involve partners in emergency response such as IFRC and ITU to ensure that the most value is gained from the memoranda of understanding that exist between those organizations and the Amateur Radio community.

The next GAREC will be held in Zurich, Switzerland, June 25-27, 2013 and all groups and organizations are invited to attend. Future conference venues have been identified as Huntsville, Alabama, United States in 2014; and Tampere, Finland in 2015. The conferees thanked their hosts, the Malaysian Amateur Radio Transmitters Society, and the people of Malaysia.

Documents of GAREC-2012 can be found here <http://www.iaru.org/garec.html>.

IARU and GAREC

For each conference, an organizing committee works together with a local host, and IARU representatives participate in the event. In its 2009 meeting in Christchurch, New Zealand, the IARU Administrative Council has now defined the relationship between GAREC and IARU, by adopting the following recommendations contained in the Statement of the GAREC-2009 Conference: "GAREC 2009 recommends that GAREC conferences should continue to be held in locations throughout the world to the extent possible and should maintain the character of GAREC as an informal meeting among representatives of IARU member societies and of Amateur Radio Emergency Communications Groups within or outside of the respective National IARU Member Society, serving as a forum for the exchange of experience and as an advisory body for the work on emergency communications of the IARU."

==> CLARK COUNTY, WASHINGTON SET: INDEPENDENCE DAY IN NOVEMBER

No, it wasn't the misdirection of a national holiday, but rather the opportunity to focus on digital messaging modes that motivated Clark County (Washington) ARES/RACES members to venture out for three hours on a dark and stormy evening, November 19. A weekday evening was selected this time around to allow members who are not normally available for weekday and/or weekend exercises to participate.

This Fall 2012 SET scenario involved a typical "4th of July" public agency communications overload, with the added task load of two simulated major fireworks-related fires, one in a mixed business/residential neighborhood and the other adjacent to Interstate

5 just north of Vancouver. More than 35 members deployed to their designated team locations, including the County EOC, the Sheriff's office, five fire departments, one hospital, one EMS station, and one SAR group. In order to practice multiple messaging modes in parallel, injects of simulated traffic came via Winlink 2000 (RMS Express and Airmail), packet BBS (Outpost), and voice. Interoperability between Windows, Mac, and Linux computers was exercised as well. At one point voice net control was smoothly shifted from 2m to 70cm. The 1.25m band was also used for passing messages. -- Steve Aberle, WA7PTM, Western Washington Official Emergency Station

==> SANTA BARBARA ARES SAVES THE DAY FOR AGENCIES IN EARTHQUAKE DRILL

The four Santa Barbara (California) County ARES units were activated on November 15 to assist the county's public health department in a state-wide emergency response exercise. As it turned out, the amateurs saved the day when the participating agencies were unable to deliver messages through the new WebEOC <http://esi911.com/esi/index.php?Itemid=30&id=14&option=com_content&task=view> computer system.

The scenario was a major earthquake and each county health department was to respond as though the disaster were local. In Santa Barbara County, players included all hospitals, skilled nursing facilities, the American Red Cross, Direct Relief International <http://www.directrelief.org/>, and retirement communities, law enforcement, public works, etc.

The County Office of Emergency Management staff had been training local agencies on the Web EOC computer program for several months. This exercise was to be a real-time test of the system, recently installed in the new Emergency Operations Center (EOC).

ARES members reported to five local hospitals to establish backup communications with the Public Health Department's Operations Center (DOC) and the County EOC. They were also asked to respond to a medical field treatment center in Santa Barbara, about 15 miles from the DOC.

Because three of the hospitals are separated from Santa Barbara and the DOC by a 4,000'-high mountain range, a 2-meter repeater on the ridgeline was used for county-wide voice communications. Each of the four areas established nets on their local repeaters and on 2-meter simplex frequencies to communicate between field units, EOCs, hospitals, and the DOC.

Within an hour of the exercise start, it was apparent traffic flow on the WebEOC system was in trouble. ARES communicators at hospitals and city EOCs were sending queries to the County EOC about messages that had not been answered and information expected to arrive had not been received via WebEOC. Fortunately, flow of traffic to, from, and between the hospitals, EOC, and DOC on the ARES networks was seamless and important information, such as conference call phone numbers and codes,

allowed the exercise to continue as planned. A Battalion Chief who is the Communications Coordinator of the Lompoc Fire Department said, "ARES was about the only communications that worked."

The ARES operator at the EOC also checked in to the state and region nets on 40 meters. In addition to voice communications backup, the Public Health Department requested the Santa Barbara ARES unit to provide Slow Scan TV from a field treatment site they had set up in Santa Barbara, about 15 miles away, to the DOC. A 224 MHz repeater on the mountain was used to send the images, which were received in both the radio room at the DOC and in the operations center so staff managing the emergency could see "victims" arriving, doctors providing triage and care, and transportation. The Emergency Preparedness Program Administrator was extremely pleased with the abilities of Amateur Radio to be flexible and respond to the needs of the operations center staff as they occurred. The staff specifically requests SSTV whenever they feel it will be useful to them.

Nineteen ARES members participated, led by Lou Dartanner, N6ZKJ, District Emergency Coordinator; Bruce Gordon, N6OLT, Santa Barbara EC; Ray Lischka, W9EC, Lompoc EC; Jim Gilbert, AK6JG, Santa Ynez EC; and Dennis Daniel, KM6DF, Santa Maria EC.

The new County EOC opened in 2011. During the construction, the Office of Emergency Management staff solicited input from ARES officials, not only for communications but for ideas and comments in general. When it came to installing amateur antennas on the 40' tower, the OEM manager told ARES there was a problem. He said the sides of the tower were

pretty full, would we mind a spot on the top? We said we would manage! The top of the tower sports a tri-band antenna (2 meter, 220 MHz, 450 MHz bands), and a "Carolina Windom" HF antenna on a cross arm to cover all HF Amateur frequencies from 3.5 to 30 MHz. At the 30' level is a 3-element 2-meter beam antenna aimed at an amateur repeater across the mountain. On top of the building are two discones, 120-1200 MHz, with one also able to work 6 meters and the other 27 MHz. -- Lou Dartanner, N6ZKJ, District Emergency Coordinator, Santa Barbara, California, ARES

==> UTAH ARES/SKYWARN SPOTTERS PROMPT INSIGHTFUL NWS LETTER

The Uintah County (Utah) ARES group was called by the National Weather Service's Grand Junction (Colorado) forecast office on Saturday, August 11, to work in a SKYWARN capacity for expected severe weather. Lamond Harrison, WX7L, Uintah County EC, sent alerting texts and e-mails, and put out a call on the radio to ARES/SKYWARN members to be prepared. Harrison reports: "At about 1:30 PM we were activated. The NWS requested that we have people stationed at multiple points on the mountain north of Vernal to report the received weather. The computer models were predicting heavy rain with hail up to 1.25 inches in diameter and high winds. So we grabbed our equipment and off we went."

Uintah County is located in the northeastern corner of Utah. It's larger than Delaware and has a population of about 33,000. Dagget County is north of the county next to Wyoming, and Moffat County, Colorado, is to the east. The NWS office in Grand Junction is located 140 miles southeast of Vernal, Utah. Because of the mountains in the area, we are in a Doppler radar "black hole," said Harrison. "The bottom of the radar image over Uintah County is about 20,000 feet high. Vernal's elevation is 5230 feet. So, the radar does not come close to seeing what is happening on the ground. The southern part of Uintah County is high mountain desert. Only Sage brush, cactus, and a few clumps of grass grow there. Flash flooding is a constant danger. So having the radar working properly is critical for the highway over the mountains and the many roads and energy workers in the desert. Because the Doppler radar image is only looking at the tops of the storm clouds the NWS has written computer models to let them know what is actually happening on the ground. They want them perfect. That is why they called us, Harrison said.

The storm produced heavy rain as expected, with the largest hail measuring 0.5 inches. Jim Pringle of the NWS office sent this post-event e-mail to Harrison:

Hello Lamond:

Our staff and I are very grateful for the assistance of you and your SKYWARN folks to mobilize and monitor the weather for us today. Although there were no "big" events from this afternoon's thunderstorms in northern Uintah County, your information helped us in several ways: Based on your reports, we learned that our radar was running "too hot" as it was indicating hail stones up to 1.25 inches in diameter, not only in Uintah County but also in Moffat County. Your information also indicated that the strong winds (i.e., greater than 50 mph) did not materialize. This information resulted in our forecast staff making the apparently correct decision to NOT issue any Severe Thunderstorm Warnings for northern Uintah County or Moffat County, even though our radar algorithms were telling us otherwise.

Also, your reports confirmed that heavy rain was occurring from those storms over northern Uintah County, which essentially confirmed the radar rainfall precipitation estimates of a third to half an inch over any one spot from any individual storm cell.

This morning, our forecast staff did discuss the possibility of drier air moving into northern Uintah County sooner than any thunderstorms could develop. Depending on the atmospheric computer model, thunderstorms could have been totally suppressed over northern Uintah County or they could develop and persist into the evening hours. That is why we were on the fence this morning when I spoke with you and Julie during the "standby" notification at 0900 MDT. Then after the thunderstorms initially developed before noon today, and when they persisted through the time that I requested the SKYWARN activation, it was decided in our office to err on the conservative side and assume the possibility that the storms could persist into the early evening

hours in northern to central Uintah County. Well, hindsight is always 20-20, and the drier air moved into northwest Uintah County by 1600 MDT. As of 1700 MDT, that drier air already moved southward with the cool front into central Uintah County.

It was a sincere pleasure working with you and your SKYWARN spotters today. :-) -- Jim

Harrison said his group was grateful to have been of help: Erik Larsen, AD70V; Heather Larsen, AD7OW; Christopher Larsen, KF7JRE; Jonathan Larsen, KF7JRK; Dirk Checketts, KD7ZLG; Susan Checketts, KF7MWS; and Lamond Harrison, WX7L, who concluded "It was fun, wet, and deliciously cool on the mountain. The temperature dropped to 51 degrees while we were there. It felt good to provide a service that afternoon, and have a heck of a lot of fun also."

==> NOMINATE NOW: 2012 ARRL INTERNATIONAL HUMANITARIAN AWARD

Nominations are open for the 2012 ARRL International Humanitarian Award <http://www.arrl.org/international-humanitarian-award>. This award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize those radio amateurs who have used ham radio to provide extraordinary service to others in times of crisis or disaster. As one of the few telecommunication services that allow people throughout the world from all walks of life to meet and talk with each other, Amateur Radio spreads goodwill across political boundaries.

The ARRL International Humanitarian Award recognizes the Amateur Radio Service's unique role in international communication and the assistance amateurs regularly provide to people in need. Nominations should include a summary of the nominee's actions that qualify the individual (or individuals) for this award, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. These statements may be from an official of a group (for example, the American Red Cross, The Salvation Army, a local or state emergency management official) that benefited from the nominee's particular Amateur Radio contribution. Nominations should include the names and addresses of all references. A committee appointed by the League's President recommends the award recipient(s) to the ARRL Board, which makes the final decision. The committee is now accepting nominations from Amateur Radio, governmental or other organizations that have benefited from extraordinary service rendered by an Amateur Radio operator or group.

Andrey Fedorov, KL1A/RW3AH, received the 2011 ARRL International Humanitarian Award. Fedorov is the former Chief Coordinator of the Russian Amateur Radio Emergency Service (RARES) and has been involved in providing communications support via Amateur Radio for almost 25 years. He has also served in Rwanda, Turkey and Kosovo as an Emergency Rescue Service Officer, and as a Regional Communications Officer for

the UN Peacekeeping Mission in Afghanistan.

All nominations and supporting materials for the 2012 ARRL International Humanitarian Award must be submitted in writing in English to ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA. Nomination submissions are due by December 31, 2012. In the event that no nominations are received, the committee may determine a recipient or decide to make no award. The recipient of the ARRL International Humanitarian Award receives an engraved plaque, as well as a profile in QST and other ARRL venues.

==> K1CE FOR A FINAL

I was taken by the letter from the National Weather Service's meteorologist to the EC of Uintah county, Utah, Lamond Harrison, WX7L. It provided an intimate glimpse into just how significant the NWS considers Amateur Radio's SKYWARN contributions are. I found it be fascinating and richly rewarding. Congratulations to Uintah county ARES.

And finally, happy holidays from all of us here on the corporate mega-campus of the ARES E-Letter Editorial and Production offices, Daytona Beach, Florida, the world's most famous beach! Catch you next year! 73, Rick, K1CE

Brevard Radio Amateurs Ready to Tune In for Doom:

Posted: 18 Dec 2012 04:02 PM PST
http://www.eham.net/articles/29532

John Rogers doesn't expect the sky to peel back into a purple haze or the ground beneath him to give way to flames, but he does believe Friday -- the date for the much-talked about end of the Mayan calendar -- will bring about a spiritual shift in the consciousness of man. "There is a lot of anxiety out there, but hopefully it's a spiritual awakening for a lot of people," said Rogers, a member of the Spiritualist Church of Melbourne, a congregation that focuses on spiritual planes, prophecies and seeking contact with the afterlife through mediums. "Just the idea of it is putting a lot of fear in people today," he said. "I've heard of folks in other parts of Florida buying boats and stocking up on supplies. After years of buildup, hype, books, documentaries and even movies about predictions for cataclysmic or transformative world events tied to the end of a 5,126-year cycle, the long count Mayan Calendar comes to an abrupt halt Friday.

DXNL 1811/1812 - Dec 19, 2012
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

Editor: Johannes Amchewicz, DK8JB
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

This double issue is the last issue of this year.
We would like to say a big Thank you to all who contributed to the
success of DXNL in 2012 with your information! We wish all our readers
and their families a Merry Christmas and a Happy New Year.

The DXNL team:
Johannes, DK8JB Editor
Klaus, DL7UXG IOTA announcements
Robert, DL7VOA translation and webadmin
Fabian, DJ1YFK support
Julian, DL6OCK IT support

7P, LESOTHO
Kiyo,JR1IZM, will be active as 7P8ZM from Maseru City in holiday style
using CW/SSB/digital modes on 40m-6m probably using an IC-7200 and loop
until Jan 15. QSL via JO1CRA.

DU, PHILIPPINES, OC-042
Al,W7XA, is living in the Philippines now. He is working as DU1/W7XA
mainly in CW on 40m-10m with 100 watts and an Inverted-V near Tagaytay,
40 km south of Manila. In February he'll start with QRO and a Hexbeam.
The QSL route will be announced on QRZ.com.

G, ENGLAND, EU-005
The RSGB celebrates its 100th jubilee in 2013. Special event stations
from all call areas (Gx100RSGB) will be active on the air. See also:
http://www.rsgb.org/aboutrsgb/rsgbcentenary2013/?id=rsgb-centenary-home
---
After 18 years the clubhouse of GB2BP in Bletchley Park has to make way
for the new park entrance and an access road to the park. It will be
re-activated occasionally as a special event station by the Milton
Keynes Amateur Radio Society (MKARS). See also: http://www.mkars.org.uk

HB9, SWITZERLAND
The Tera Radio Club (HB9OK) plans to be active with the special call
HB30OK almost everyday between Jan 1 and Dec 31, 2013 celebrating the
30th anniversary of the club.

HI, DOMINICAN REPUBLIC, NA-096
Alex,HI7/RO5D, is working on 20m/15m/10m and maybe 40m until Dec 25.
QSL via homecall.

JA, JAPAN, AS-007
The special event station 8N119T will be active in all modes on all
HF bands between Dec 23 and March 25 to celebrate the 65th anniversary
of the Tokyo Fire Department. 119 is the emergency number in Japan fo
ambulance and firemen. QSL via bureau.

LY, LITHUANIA
The Christman special event station LY12XMAS is working until Dec 31.
QSL via LY2QT.

OA, PERU
Martijn,OA4/PA3GFE, will be working holiday style mainly in CW/digital
on 40m-10m from Dec 20 until Feb 2. He also wants to put a resonant
80m antenna on air. QSL via homecall, LoTW.

SP, POLAND
The special event station HF0WOSP will be activated by the "Klub
Krotkofalowcow Lok" in January. QSL via SP2KFL. See: http://sp2kfl.org
---
The special event station HF2012PLL is working from Swidnik until
Jan 14 to promote the new airport Lublin. The OPs are Marek,SP8QEJ,
Arek,SQ8BGR, Zdzisiek,SQ8EP, and Krzysiek,SP8GVM.
See also: http://www.zwiedzajlubelskie.pl/lotnisko

SU, EGYPT
Gerd,DJ5IW, received a licence for Egypt and is active as SU/DJ5IW
until Dec 21. QSL via homecall.

VE, CANADA
The special event station CK3B celebrates the 50th anniversary of the
Nature Conservancy of Canada (NCC) until Dec 28. QSL via VE3JPP.

VP9, BERMUDA ISLANDS, NA-005
Masa,K1GI/VP9, wanrs to hit the airwaves in CW, SSB and digital modes
on 160m-10m from Dec 29 until Jan 2.
QSL direct via JG2BRI, LoTW, ClugLog (OQRS).

W, USA
On Dec 21 the Mayan calendar comes to an end. Some people are afraid
of the the end of the world. The OPs of N0D are waiting for the
possible events on Dec 20/21. If nothing happens they will be QRV
also on Dec 22. QSL via KK5W, unfortunately only direct.
See also: http://www.nowzerodays.com

XE, MEXICO
Members of the Radio club Cancun announced to activate the special
event station 4A0MAYA in SSB, RTTY and PSK31 on 40m-6m from Dec 19-23.
QSL via XE3RCC. See also: http://www.4a0maya.info

Markus,XE1/DJ4EL, will be working from Tlaxcala near the Malinche
volcano (4460m) from Dec 20 until Jan 2. QSL via homecall.

LINKS: Current SOTA activities (mountain summits) are announced at:
http://www.sotawatch.org

aVEhKMVE6MQ

IOTA compiled by Klaus, DL7UXG (e-mail: iota@dxhf.darc.de)

Island activities:
AS-013, 8Q, Maldive Islands: Max,HB9TUZ, is going to spend his holidays on
the North Male Atoll (WLOTA 3911) from Dec 26 until Jan 3. He will sign
8Q7MS in holiday style on 80m-10m SSB. QSL only via eQSL.

AS-021, A6, Trucial Coast group: Members of the Emirates Amateur Radio
Society are planning a trip to Umm Al Hatab Island from Dec 19-24.
They will be active as A63HI on the HF bands. QSL via IZ8CLM.
See also: http:/www.ears.ae

AS-031, JD, Chichi/Haha/Muko Islands: Harry,JG7PSJ, will be QRV as JD1BMH
from Chichijima (WLOTA 2269, Loc QL17cc, JCG 10007) between Dec 30 and
Jan 4. Listen for him in CW, SSB and RTTY on 80m-10m.

QSL via JD1BMH (bureau) or JG7PSJ (direct). See: http://jd1bmh.zxq.net

EU-171, OZ, Jylland North group: Michael,5P1KZX (EPC #19406), will show up
from Frederikshavn on Vendsyssel-Thy (DIA NJ-001, Loc JO57gk) from
Dec 23 until Jan 9. Michael uses this call for QSOs in PSK and RTTY.
He wants to work also on 160m during Christmas. QSL via homecall.

Caribbean Tour by K3LP: David,K3LP, continues his trip through the Caribbean
and will show up in holiday style from following islands:
Dec 23: NA-106, KP2, Virgin Islands: St. Croix (USi VI002S, WLOTA 2477)
as KP2/K3LP
Dec 24: NA-104, V4, St. Kitts and Nevis: from Basseterre as V4/K3LP
Dec 25: NA-101, J7, Dominica: from Roseau as J73/K3LP
Dec 26: NA-024, J3, Grenada: from St. George's (WLOTA 0718) as J3/K3LP
Dec 28: NA-106, KP2, Virgin Islands: from Charlotte Amalie, St. Thomas
(USi VI004S) as KP2/K3LP
Dec 29-31: NA-099, KP4, Puerto Rico: San Juan (USi PR006S, WLOTA 2802)
as KP4/K3LP
All QSLs via K3LP (bureau/direct). See also: http://www.k3lp.com

NA-046, W1, Massachusetts State South (Bristol to Barnstable County) group:
Howie,K1VSJ/p, will be QRV from Martha's Vineyard (USi MA005S,
WLOTA 2804) from Dec 28 until Jan 1 with focus on working JA on 15/10m.
QSL via homecall (bureau/direct).

NA-100, V2, Antigua and Barbuda: Kei,KG2A (aka JJ1RJR), is going to visit
Antigua (WLOTA 1118) from Dec 23-29 and will hand out IOTA points as
V25A in SSB and CW on 160m-10m. QSL only direct via KG2A.

NA-103, VP2M, Montserrat: Nao,JN1RVS, plans to show up as VP2MRV in CW and
RTTY on 80m-10m from Montserrat (WLOTA 1475) between Dec 21 and Jan 3.
QSL via JA1HGY (bureau/direct/LoTW).

NA-114, FG, Les Saintes Island: Nicolas,FG4NO, will move from Terre de Haut
to Les Saintes Island on Jan 1 which makes him the only active station
from this IOTA group. See also: http://fg4no.fr
QSLs for stations in region 1 via F4AVX (bureau/direct).
QSLs for stations in region 2 and 3 via FG4NO (d).

OC-009, T8, Palau Island: Ryosei,JH0IXE, will be QRV again as T8CW from
Koror Island (Loc PJ77fi) working in RTTY, PSK31 and JT65A on 160m-6m
from Dec 24 until Jan 6. QSL via homecall (bureau/direct).

OC-100, H40, Nendo Island: Sigi,DK9FN, is visiting the Solomon Islands again
and plans to show up as H40FN from Nendo Island (Temotu province) in
in CW (only little SSB) from Dec 22 until Jan 7.
All QSOs will be confirmed via bureau automatically. Direct requests
should be sent to HA8DD.

IOTA general information: Following operations of Oct/Nov 2012 were
approved for the IOTA program: VK4EI/P (OC-171) and 7Z7AB (AS-190).
AS-190 is a valid IOTA group now.

Cobb commission orders man to remove his amateur radio towers
Marietta Daily Journal
Nesbitt responded by arguing that ham radio operators are licensed by the

Federal Communications Commission and therefore are exempt from local ordinances. But just to be safe, he applied for a special land permit for the 140-foot tower, which the ...

MMMonVHF Newsletter No. 1/ WEEK 51 2012

Hallo dear MMMonVHF friends,

please find below our latest NEWSLETTER from the VHF-DX-Portal
"Make More Miles on VHF" (www.MMMonVHF.de), dated 2012-12-31
We try to distribute our Newsletter, once a week on thursday;
if any special activity will make it necessary
we will inform you with Breaking News or a Special NL-Edition.
For further details please be so kind and look at our "News"-page
http://www.mmmonvhf.de/latest.php - you are welcome for any
input and we hope you will enjoy the VHF-DX-Portal MMMonVHF!

****
Latest NEWS and INFO for the NEWSLETTER

** DXCC: 3B9 ; Rodrigues Isl ; Square: MH10 ; start 2013-09-01

3B9EME will be qrv from Rodrigues Isl. (MH10qh) in september 2013.
After the success of the J52EME DXpedition by the Verona DX Team,
we are pleased to announce the activation of a new one for 2013.
We will be in 3B9, Rodrigues Island, for EME activity in 144 and 432 Mhz.
The period will be 1 to 9 September 2013. Flights and hotel are already booked.
We await the granting of the call 3B9EME, with the aid of the contacts of Rene PE1L,
which is, along with Atletico Team, our example for DXpedition activity.
Soon more news about equipment, antennas and QRG.
Best 73 from Lucio I3LDP, team leader Verona DX Team - ARI Verona

SOURCE: tnx to Lucio I3LDP direct to MMMonVHF

Episodes 41 and 42 from the ARRL/TAPR DCC

Episode 41: Experimenting with High Speed

Wireless Networking in the 420 MHz Band

David Bern W2LNX looks into long distance, high-bandwidth digital signals
using

low-power, off-the-shelf data radios in the 420 MHz band. He uses digital
television to generate

the wideband signals, and a little lift from some Virginia mountains to
extend his line-of-sight.

How far do you think these few-hundred milliwatt radios worked to carry
several megabits per second?

HamRadioNow

Episode 42: On-line Alternation of

Modulation Techniques using a Dynamic Switch

Shashank Gaur and his masters degree classmates from Ecole Centrale
d'Electronique

in Paris are experimenting with ways to dynamically change digital
modulation modes to adapt

to changing conditions for maximum throughput, using USRP radios.

HamRadioNow

The ARRL/TAPR DCCis an annual, three-day conference featuring presentations
on a variety of

technical and operational aspects of Amateur Radio. This year's DCC, held in Atlanta last

September, had 16 of the 45-minute main presentations, the usual Saturday banquet talk,

and a four-hour "deep dive" into GNU radio on Sunday. HamRadioNow videotaped all the talks,

and we are now releasing them on-line. We'll continue with one or two a week until

you have them all.

Watch these episodes at our web site, www.HamRadioNow.tv.

AGB-PARTY-Contest-2012 = Dec 21, 2012

Posted: 20 Dec 2012 01:04 AM PST
http://forums.qrz.com/showthread.php?372748-AGB-PARTY-Contest-2012-Dec-21-2012&goto=newpost

I invite you to take active or possible part in the forthcoming
AGB-PARTY-Contest-2012

which will be on Friday December 21, 2012 = 2100 - 2400 UTC.

http://www.ev5agb.com/contest/agb_party.htm

AGB-PARTY Contest

DATE: Therd Friday of Decemberr (21 Dec 2012) 2100 - 2400 UT

The object of the Contest: Licenced amateurs radio worldwide and SWL;

CONTEST CALL: CW - TEST AGB; SSB - CQ AGB CONTEST;

MODE: CW, SSB and Digital modes;

FREQUENCIES: CW (3510 - 3555); SSB (3700 - 3750) - recomende; Pilot
frequency (for Pile-Ups before Contest): CW-3540, SSB-3720

REPEAT: Each 15 minutes (12 periods) you can make CW-QSO and SSB-QSO with
every station.

Also you can make QSO Digital-Digital other modes.

There are periods :

2100 - 2114, 2115 - 2129, 2130 - 2144, 2145 - 2159,

2200 - 2214, 2215 - 2229, 2230 - 2244, 2245 - 2259,

2300 - 2314, 2315 - 2329, 2330 - 2344, 2345 - 2400,

ENTRY:

A ☐ Single Operator MIXED (CW + SSB) ☐ AGB-member

B ☐ Single Operator CW ☐ AGB-member

C ☐ Single Operator SSB ☐ AGB-member

D ☐ Single Operator MIXED (CW + SSB)

E ☐ Single Operator CW

F ☐ Single Operator SSB

G ☐ Single Operator MIXED (CW + SSB) QRP (Max 10W)

H ☐ Multi Operator

I - SWL

J - Digital (RTTY, PSK, AMTOR, PACKTOR...)

K - ONE HOUR (Special for Contesters, who havn't Time - Health, some problems in Family, for take part in Contes ...)

This year there will be a special category, for calculation of the best result among participants from KDR club. - Woulf you like (KDR-members) to write your KDR-number in LOG.

EXCHANGE: No AGB member stations - RST + number of QSO (599-001);

AGB member station - RST + number QSO + AGB-number (599-001/60 or 599-001-A60);

Annual AM Night on 1936 KHz.

Posted: 18 Dec 2012 08:22 PM PST
http://forums.qrz.com/showthread.php?372614-Annual-AM-Night-on-1936-KHz&goto=newpost

The Greater Cincinnati Amateur Radio Association's weekly net on1936KHz at 9PM every Thursday will be hosting its annual AM Night on ThursdayDecember 27th.

AM stations running every vintage of AM equipment from retiredbroadcast rigs, classic boat anchor rigs and the latest software defined radiosare invited to join the activity on 1936KHz. On the Thursday followingChristmas. Net Control station NM4A at Union, Ky. will host theactivity which formally begins at 9PM ET.

Pre net activities will begin as early as 6 PM ET. All stationschecking in early will be logged in via Net Logger. You can monitor theactivity by going to www.netlogger.organddown loading the program and then looking for the GCARA AM Night log.

Certificates will be issued to all stations checking inas well as to stations in various classes of equipment.

This activity has usually attracts 70 + AM stations from allover the US operating a wide variety of heavy metal rigs as well as the latestin AM technology. All station operators are invited to join in on this annualgathering. Each operator will be asked to describe his or her station.

Join the fun on 160!

Reliving the 'Final Dash' to Mark Morse Code Anniversary:

Posted: 20 Dec 2012 12:25 AM PST
http://www.eham.net/articles/29534

A VERY special slice of local history unfolded to the tune of dots and dashes in the Bombala Post Office last Thursday, December 13. Here a fascinated group of locals gathered to watch a re-enactment of the final Morse code message ever sent in NSW. This last telegram was originally transmitted from the Sydney GPO in Martin Place to the Post Office in Bombala on December 13 of 1962, with this year representing the 50th anniversary of the milestone.

Press Release from the Santa Claus Post Office

December 20, 2012

<http://www.laplandfinland.com/In_English.iw3>

SANTA HITS THE RADIOWAVES THIS COMING WEEKEND

Temperatures have dropped down to minus 34.5C (-30.1F) in Lapland (OH9) while ever energized Santa Claus will have his final radio sessions from the Far North, using his own Santa path this weekend around 14.225 kHz (Europe and North America) and 21.295 kHz (Asia and Europe) to greet children and True Believers alike before taking his long journey to the world. Today Santa's office is busy sending out 150 operating awards often addressed to the children of radio families.

<www.qrz.com/db/OF9X>

Santa Radio OF9X is active this weekend but OH9SCL (Santa Claus Land) will stay on for a few more days after Christmas from the Far North of Lapland – the village of Lankojarvi, near Pello (Location 66.44N, 24.21E) with Kimmo, OH9MDV at the controls.

The members of Santa Team are here to wish everyone the very best of Season's Greetings for Christmas 2012.

SECRET OF CHRISTMAS

Santa Claus! It is quite a remarkable name. When hearing this name, everyone forms their own image of the white-bearded bringer of Christmas cheer. Although we all have our own image of Santa Claus that may greatly differ from others, one thing is certain: Santa Claus represents

Finnishness, warmth, joy and the magic of Christmas. But some secrets prevail this Christmas; for instance, that Santa is a ham, works DX, and lives under the largest antenna in the world.

Have you ever wondered how long Santa's beard is, or how the Northern Lights in Lapland, Finland are created? Did you know this about Santa in Lapland? There is a data archive maintained by Professor Elf that will answer all the questions you care to raise. Mrs. Santa Claus also wants to reveal some of her own secrets, so the Secret Recipe File is published as a cookbook telling you how to prepare delicious Yuletide delicacies. By the way, we bet not many people know that there is indeed a Mrs. Santa Claus. Did you know that?

The white-bearded Old Man and Mrs. Santa Claus have known each other from well before the first fells formed in the wilderness of Finnish Lapland. Mrs. Santa Claus also lives at Korvatunturi and her job is to keep the entire Korvatunturi neighborhood running while the Old Man and the elves concentrate on their own important tasks. Mrs. Santa Claus can also be met in the Municipality of Savukoski to which Korvatunturi belongs, where she has her own cabin.

The story is reaching its climax this coming weekend, before Christmas Day, when Mrs. Santa Claus is brought into the limelight upon her return from a short stint in the United States and her picture is posted here on this website. Her name will be made public for you to observe. This is "Breaking News" since no one knew that Santa has a Lady Friend. And what the heck was she doing in the United States just prior to Christmas?

So, be prepared, on Saturday and Sunday this weekend. Slightly above 14.225 kHz, tune in to the famous Santa Radio, OF9X and listen. It is only a few days to Christmas and the Santa magic is here. Ask the magic question: what is the exact name of Santa's Lady Friend and why was she in the U.S. this week?

Amateur Radio Newsline(tm) Report 1845 - December 21 2012

Amateur Radio Newsline report number 1845 with a release date of December 21, 2012 to follow in 5-4-3-2-1.

The following is a QST. New Zealand approves a Digital amateur radio repeater to test compatibility with other radio services; the United States says no to a new I-T-U treaty to govern the Internet; the Dutch military wont give up 915 MHz for unlicensed short range devices; and a new eye on the sky down-under will warn of solar eruptions. Find out the details are on Amateur Radio Newsline(tm) report number 1845 coming your way right now.

**

RADIO COMPATIBILITY: NEW ZEALAND ATV REPEATER TO TEST COMPATABILITY WITH COMMERCIAL BROADCASTING

In what may be a first anywhere world-wide, a New Zealand amateur radio service digital ATV repeater has been given a chance to test its compatibility with commercial broadcasters. Amateur Radio Newsline's Jim Meachen, ZL2BHF, reports from down-under:

--

New Zealand Radio Spectrum Management or RSM has granted the first Digital Amateur TV License to NZART Branch 74, the Wellington VHF Group, for use at its main station located on Mount Belmont, in Wellington.

The main features of License 236831 are: Digital TV Channel 25 (DTV25); 502 MHz to 510 MHz; DVB-T format; 7.7 MHz emission bandwidth; 100 Watts mean effective isotropic radiated power and horizontal polarization

The license is valid for an initial period of 6 months, from 1st January 2013 to 30th June 2013.

The license permits DATV transmissions for the purpose of testing compatibility with services on the adjacent frequencies and requires the production of a comprehensive report to RSM.

The DTV25 channel is, in effect, the guard band between Communications services below 502 MHz and Digital TV Broadcasts above 510 MHz (DTV26 and above).

It is hoped that these tests will, once again, demonstrate the engineering capabilities of Radio Amateurs and lead the way to the granting of DATV licenses throughout New Zealand.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF, in Nelson, New Zealand.

--

If the test proves successful it holds the potential of opening up a new concept in channel sharing between amateur radio and other telecommunications services. (ZL2BHF)

**

RADIO LAW: FOLLOW-UP - US SAYS NO TO DUBAI INTERNET TREATY

A follow-up to last weeks story regarding that confrontational meeting in Dubai to discuss the future of the Internet. As the gathering drew to a close the United States joined 20 other counties in refusing to sign a treaty that they say will harm Internet freedom.

The final proposal was forged at an international communications conference that ended Friday, December 14th. A major problem of the treaty produced by the 193 nation International Telecommunications Union was its endorsement of greater control over the Internet by governments.

United States Ambassador Terry Kramer said that rejecting the treaty was an obvious direction for the U.S. delegation to take. He told the media that there were too many concerns that were problematic for the nation.

AS reported last week, one issue troubling the United States is language extending the treaty to Internet Service Providers and private network operators, as well as governments. The United States believes this would invite greater government control of the Internet. The same is true of provisions in the treaty to fight cybercrime. According to the U.S. delegation the broad powers designed to increase network security could too easily be abused by governments.

The chair of the World Conference on International Communications is Mohamed Nasser Al-Ghanim. He disagreed with the dissenting countries noting that their concerns are addressed in the text. Al-Ghanim said that special provisions were written into the treaty to say that content is excluded and that he Internet will continue to express freedom of thought as it has.

If the Dubai conference showed anything, it's that a major schism exists between the developed nations and much of the ITU over Internet issues. Some believe this could result in a second, more strictly regulated Internet emerging, although experts acknowledge that would be difficult to actually create.

The final version of the treaty goes into effect in 2015, but without the signatures of many of the Internet super powers, its effect is likely to be minimal at best. (Various Internet news sources)

**

RESTERUCTURING: DUTCH MILITARY STILL INSIST ON 915 MHZ

With almost 42 CEPT nations reporting that 915 to 921 MHz is empty, or emptying, it is hoped the band will soon be made available for Short Range Devices or SRD's.

An article by Bill Ray in UK newspaper The Register implies that the Dutch military appear to be just about the only obstacle to 915 to 921 MHz being available for Short Range Devices use on a world-wide basis.

To date there has been no globally available license exempt spectrum for Short Range Devices available between 42 MHz and 2.4 GHz. In some countries such as the United Kingdom, spectrum at 433 to 435 MHz has been used as a stopgap move. However this has caused considerable interference to other existing licensed services. (UK Register, Southgate)

RADIO FROM SPACE: NORTH KOREA SATELLITE ATTAINS ORBIT BUT NOBODY HAS HEARD IT TRANSMIT

North Korea appears to have successfully launched a satellite into space through the use of its Unha 3 satellite launcher, but may have lost control over the bird soon after it attained orbit.

As reported by several news outlets, according to U.S. officials, the satellite which was launched by North Korea on Wednesday, December 12th is now believed to tumbling out of control in an uncontrolled orbit and nobody is quite sure what the spacecraft's purpose or capabilities are.

North Korea lofted the spacecraft on the long-range rocket from its Sohae Satellite Launch Station on the nation's northwest coast. The launch was detected by United States missile warning systems. NORAD, the North American Aerospace Defense Command said the Unha-3 rocket's first stage fell into the Yellow Sea, while the second stage fell into the Philippine Sea. It went on to state that the missile deployed an object that appeared to achieve orbit.

According to the ITU the North Koreans have so far not specified the type or format of the data or video transmissions it plans to make through the satellite although said it expects the transmissions to continue for up to 2 years. Currently the only claim from North Korea is that the bird is transmitting music on either 470 or 479 MHz but so far no monitoring stations have reported hearing this new bird or its sound. Similar claims were made in 1998 for another North Korean orbital launch attempt that is believed to have failed. (Space.com and various news sources)

HAM RADIO NEAR SPACE: END OF THE WORLD TRANSATLANTIC HIGH ALTITUDE BALLOON PREMATURELY BURSTS

The transatlantic crossing attempt by an amateur radio balloon carrying an 18 MHz PSK beacon ended over the coast of Mississippi when the balloon prematurely burst.

The ham radio balloon called BLT-32 carried a PSK 31 transmitter on 18.100 MHz. It was due to be launched late Saturday, December 15th from near Sugarland, Texas with its destination aimed at Europe. According to reports it only made it a few hundred miles.

The South Texas Balloon Launch Team had joined the N0D End of the World Special Event with the launch its high altitude 'floater' balloon with hope of it reaching Europe before the End of the World took place as described in one Mayan calendar. And in keeping with the theme of the event the beacons and APRS tracker on the balloon were to use the N0D call sign. N0D meaning Now Zero-Days. And it was a case of Now Zero-Days for this ham radio balloon flight.

As reported last week a similar ham radio floater balloon launched by a group in Northern California dis make it across both the United States and the Atlantic Ocean before descending in Morocco. (Southgate)

ENFORCEMENT: UK REGULATOR OFCOM SUPPORTS INVALIDATED EXAM

The United Kingdom's Radio Communications Foundation or RCF has announced that telecommunications regulator Ofcom has supported its decision to disallow an amateur radio examination in Northern Ireland.

According to a statement on the RCF, the Ofcom findings were that there is no hard evidence of wrong doing by the club or candidates but nevertheless the examination results were considered unsafe. Also that the suspension of the club concerned from running examinations was appropriate in the circumstances but it is now free to resume this activity.

The Radio Communications Foundation has offered a free re test to both of the candidates whose exam was invalidated. (Southgate)

ENFORCEMENT: FCC AFFIRMS $16000 FINE FOR OUT OF BAND OPERATION

Back in the USA, the FCC has affirmed a $16,000 fine issued to a radio amateur for his alleged operating on a frequency reserved for government use only. We have the details in this report:

--

Recipient of the monetary forfeiture order is Joaquim Barbosa, N2KBJ, of Elizabeth, New Jersey, whom the FCC says operated a transmitter on the frequency 296.550 MHz without Commission authorization.

In his own defense Barbosa who holds an Extra class license, filed a response to the original Notice of Apparent Liability. In it he admitted to operating a radio transceiver on the frequency 296.550 MHz but contended that that cancellation or a substantial reduction of the then proposed $20,000 forfeiture is warranted nonetheless for several reasons. First that he reasonably believed that he had authority to operate on the frequency 296.550 MHz. Second, that his constitutional rights had been violated. Third that the unlicensed operation did not cause harm or interference. Forth that the forfeiture amount is not supported by case precedent and lastly that there are other factors such as his cooperation with the investigation, inability to pay, and prior history of overall compliance with the rules.

But the FCC bought only one of Barbosa's arguments. In issuing its final order it agreed that a reduction of the forfeiture amount was warranted based on its review of the record and finding that Barbosa, prior to this investigation, has a history of overall compliance with the Commission's rules. So after consideration of the entire record including Barbosa's response to the initial Notice of Apparent Liability that it was going to knock $4000 of the now affirmed fine and reduce it to the $16000 level.

For the amateur radio Newsline I'm Heather Embee, KB3TZD, near Berwick, Pennsylvania.

--

As this is now an affirmed fine, Barbosa was given only until close of business on December 31st to pay it or the case may be referred to the U.S. Department of Justice for enforcement of the forfeiture pursuant to Section 504(a) of the Communications Act. (FCC)

**

ENFORCEMENT: FCC REDUCES FINE ISSUED TO NY UNLICENSED BROADCASTER

The FCC has issued a Memorandum Opinion and Order that in part grants and in part denies a Petition for Reconsideration filed by Dexter Blake of Mt. Vernon, New York. This in regard to a $10,000 Forfeiture Order issued to him for willfully and repeatedly operating an unlicensed radio broadcast station.

On March 3, 2009, the Enforcement Bureau's New York Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Blake for operating an unlicensed broadcast station on the frequency 101.5 MHz in Mount Vernon, New York. Blake did not file a response to the proposed fine. As a result on July 22, 2010, the Enforcement Bureau issued a Forfeiture Order affirming the findings in the Notice of Apparent Liability and assessing the $10,000 forfeiture.

That apparently got Blake's attention after which he filed his petition for reconsideration. In it, Blake admits to having operated the unlicensed station, but claims that cancellation is warranted because the individual from whom he received the equipment did not advise him that he needed an FCC license. In addition, he requested a reduction or cancellation of the forfeiture based on his inability to pay.

Now, after what it calls a careful review the FCC issued its decision on December 13th. In it, the agency said that although Blake concedes operating an unlicensed radio station that it is a violation of Section of the 301 of the Communications Act. Therefore it declines to cancel the forfeiture on this basis. However it does agree with Blake that the $10,000 amount would constitute a financial hardship and as such has lowered the fine to $1700.

Blake was given 30 days to pay the reduced fine or the case may be referred to the U.S. Department of Justice for further enforcement. (FCC)

**

RADIO LAW: FCC SAYS HAWAIIAN CABLE OPS MUST CARRY KLEI TV

The FCC says that two cable television stations in Hawaii must carry a particular station even though neither wants to. Amateur Radio Newsline's Don Wilbanks, AE5DW, has the rest of the story:

--

The FCC has denied a request by Oceanic Time Warner Cable and Hawaiian Telcom Services Company asking that they not carry KLEI TV on their respective systems. The station, under new ownership since 2011, asked for carriage, but the operators said no so KLEI then filed a must-carry complaint.

In part, the FCC agreed with the cable operators that the station could not argue historical carriage as neither had been carrying the station before it was bought in 2011. That's when the new owners sought carriage or that it was delivering an over-the-air signal to any of the communities it sought cable carriage in. Those are two of the four tests for cable TV carriage.

But in this case the FCC took a different view. It said the absence of those two points was not sufficient to deny the station's request. The agency said that the unique characteristics of the Hawaiian market and KLEI's strong lineup of local programming of relevance to the

inhabitants of Hawaii County and to all Hawaiians. Also that it's foreign language programming targeted at special groups and residents, persuaded it to grant the carriage complaint.

Hawaiian Telcom Services Company had said that if it carried KLEI, it should not have to carry it on channel 6 in Honolulu. This is because it was already carrying station KBFD there. The FCC rejected that request as well. I t pointed out that it has clarified very recently that a digital station, generally speaking, is entitled to be carried on its former analog channel number. In this case KLEI was channel 6 and KBFD was 32.

I'm Don Wilbanks, AE5DW.

--

At airtime its not known if either the Hawaiian Telcom Services Company or Oceanic Time Warner Cable plan to file an appeal. (FCC. B&C)

THE BPL-PLT WAR: DARC TO HOLD STRATEGY MEETING ON DANGERS OF PLC / PLT

This note to our listeners in Germany. On Saturday, January 12, 2013 the Deutscher Amateur Radio Club will be sponsoring a one-day workshop dealing with the possible hazards to amateur radio from electromagnetic Powerline Transmission more commonly known in Europe as in-home P-L-T. The workshop slated for the DARC headquarters in Baunatal will cover all aspects of powerline Internet transmission and its likely effects on amateur radio operations. All DARC members wishing to attend are welcome. Interested parties are asked to pre-register by contacting Renate Stackebrandt by e-mail to r.stackebrandt (at) darc (dot) de. More is on line at tinyurl.com/GermanyDARC. (DARC, Southgate)

THE SOCIAL SCENE: SUPERSTITION HAMFEST RESCHEDULED TO FEBRUARY 19

Arizona's postponed Superstition Hamfest will now take place on Saturday, February 9th at Mesa Community College off of highway 60 in western Mesa, Arizona. The Superstition Amateur Radio Club, sponsor of

the event that usually takes place in December says that it appreciates everyone's patience and once again apologizes for the inconvenience the rescheduling has caused. For more information please take your web browser to tinyurl.com/superstion-hamfest. An updated information sheet may be downloaded from the site in PDF form. (WB7C)

**

RADIO HAPPENINGS: SAQ VLF TRANSMISSION CHRISTMAS EVE

There will be a transmission from Sweden's famed Alexanderson 200 kilowatt Very Low Frequency alternator on Christmas Eve. The transmitter will be tuned up from around 07:30 UTC with the message itself transmitted on 17.2 kHz at exactly 08:00 UTC on Monday, December 24th.

The Alexanderson alternator is located at the Grimeton Radio SAQ transmitter site. If you copy the message you are asked to send QSN reports via e-mail to info (at) alexander (dot) n (dot) se. You can also mail reports via the S M bureau. More information on the Alexanderson alternator is on-line at www.alexander.n.se. (Southgate)

**

RADIO HAPPENINGS: CRICKET CAM COMING DOWN-UNDER

FOX Sports reportedly will take broadcasting of cricket competition in Australia to a new level this summer. This with pictures to be broadcast from micro size cameras installed in helmets worn by batsmen and wicket keepers.

According to the WIA News, the equipment consists of a High Definition visor-mounted camera and transmitter with batteries on the rear strap. The additional weight on the helmet is only 250 grams, or about the weight of a bar of soap.

The can be fitted to any player's helmet during the game. Fox Sports believes it will be the first camera attached to a player during a Cricket match at this level. The technology is to be officially introduced in the Big Bash Twenty tournament.

For those unfamiliar with Cricket, it is a baseball like game played between two teams of 11 players. One team bats, trying to score as many runs as possible while the other team fields, trying to dismiss the batsmen and limit the runs scored by the batting team. The game is most popular in Australia, England, the Indian sub-continent, the West Indies and Southern Africa. (WIA News)

THE CHANGING OF THE GUARD: RADIO PIONEER RAY BRIEM, N6FFT -S.K.

We seem to be using the words of the changing of the guard more often these days, and once again they seem most apropos. This with the word of the passing of broadcasting legend Ray Briem, N6FFT as we hear from Amateur Radio Newsline's Bruce Tennant, K6PZW:

--

Anyone born or raised in the great American Southwest in the last half century likely knows the name Ray Briem. For some 30 of those years Briem who held the Amateur Service call letters N6FFT was called the host who owned overnight talk radio on Los Angeles station KABC A.M..

Born Leland R. Briem in Ogden, Utah, in 1930, Ray Briem first took to the radio airwaves at the age of fifteen. On August 14th, 1945 he was asked by a station manager to substitute for a staff announcer and with that his days in radio were off and running.

The highlight of Ray Briems career was when he came to KABC in 1967 where he held court over the nighttime hours until 1994. While he loved big band music and interviewed hundreds of celebrities his mainstay was talking with and to his listeners. And when he got involved in shortwave listening and then ham radio, several nights each year were devoted to talking about both of these topics. Frequent guests on those special shows included the late Lenore Jensen, W6NAZ, her husband Bob, W6VGQ and Lloyd Sigmon, W6LQ, who created the traffic alert system named in his honor known as the Sigalert.

After retiring from KABC, Ray Briem did a brief afternoon talk show on KIEV-AM. He received a star on the Hollywood Walk of Fame and in 2008 was honored for his contributions to broadcast radio by the Pacific Pioneer Broadcasters organization.

On a personal note, unlike some celebrities with call signs, Ray was more than a name in an amateur radio database. He was often heard on the local ham radio airwaves and I myself had many contacts great with him through the Catalina Island repeater. As always, be it speaking to hundreds of thousands over KABC, or in a one on one contact via ham radio Ray Briem, N6FFT, was a true gentleman and a friendly voice in the night that will be missed.

For the Amateur Radio Newsline, Im Bruce Tennant. K6PZW, in Los Angeles.

--

For a truly beautiful retrospective about Ray Briem, N6FFT, and his career we suggest that you read the article by fellow broadcaster Doug McIntire that appeared in the Los Angeles Daily News. You can find it at tinyurl.com/la-daily-news-briem. (ARNewsline(tm); K6PZW, published news reports)

RADIO FROM SPACE: NEW HUGE TELESCOPE TO WARN OF SOLAR STORMS

Astronomers say a new eye on the sky in Western Australia's remote outback could potentially save the world billions of dollars. This by warning of a pending cosmic catastrophe.

The International Center for Radio Astronomy Research in Perth reports that the new Murchison Widefield Array radio telescope will give a dramatically improved view of the sun. This in turn should provide an early warning of explosive solar storms that can damage to communication satellites, electric power grids and GPS navigation systems.

In addition to its solar observations, the Murchison Widefield Array will offer scientists an unprecedented view of the entire history of the universe, including how the very first stars and galaxies formed. (WIA)

**

WORLDBEAT: ZIMBABWE THREATENS TO JAM SHORTWAVE BROADCASTS

The South African nation of Zimbabwe thinks it should jam shortwave broadcasts from outside that nation's borders. Newzimbabwe.com reports that at a recent Zanu PF party conference it was proposed to jam the signals of foreign-based radio stations such as Voiceof America's Studio 7, Radio Voice of the People and South West Radio Africa that ruling party officials accuse of pushing a Western-backed regime change agenda in Zimbabwe.

But critics say such a move would deny the majority of people access to important alternative sources of information to make informed decisions. They argue that President Robert Mugabe's party wants to continue its domination of the airwaves in order to maintain the status quo. But Zanu PF officials maintain these radio stations are breaking the Zimbabwe law and should be jammed. More is on-line at tinyurl.com/zimbabwe-jamming-threats. (Newzimbabwe)

**

ON THE AIR: NEW SUPER LOW POWER 80 METER BEACON FROM ITALY

On the air, keep an ear open on 80 meters for a new QRP level propagation signal. The Irish Radio Transmitting Society reports that a new European low power beacon is transmitting on 3574.5 Kilohertz using only 300 milliwatts. The callsign is IZ3NYT with diagrams and pictures at iz3nyt.altervista.org/gallery. Text is in the Italian

language. QSN reports go to IZ3NYT using eQSL or direct. (IRTS)

**

ON THE AIR: TC9SAM IN MEMORIAM OF THE ALLAHEKBER MARTYRS

If you contacted special event station TC9SAM between December 20th and the 24th you are being asked to QSL direct only. TC9SAM was to operate at the Turkish Scouting and Guiding Federation's National Conciousness Camp-In held in memoriam to the Allahuekber martyrs. The memorial is a traditional winter march to Allahuekber peak in eastern Turkey held in memory of the 60,000 patriots who were frozen to death while trying to reach the occupied Kars city in December of 1914. In accordance with the camp program operations of TC9SAM were mainly on 80 and 40 meter SSB. (TA1HZ)

**

DX

In DX, members of the Lufthansa Amateur Radio Club Frankfurt will be on the air from Vietnam from February 15th to the 26th. They will operate as XV2DLH and will be active on all of the High Frequency bands. QSL's go via DK8ZZ.

JR1IZM who also holds the call V31IZ will be operational as 7P8ZM from Lesotho through January of 2013. He will be active on all of the High Frequency bands. QSL via JO1CRA

F6ITD will be on the air stroke FG from Guadeloupe and two islands between next February 1st and March 25th. He will be using SSB and the Digital modes during his stay. Logs will be uploaded to both ClubLog and Logbook of the World. QSL via his home call either direct or via the bureau.

GM3YTS, GM4FDM, GM0GAV and GM3POI will be operational as T2GM from Tuvalu between March 12th and the 23rd with their activity will be focused on Europe. The group now has a Web page available at t2gm.org. QSL via GM4FDM.

K1GI will be active stroke VP9 from Bermuda between December 29th and January 2nd. Operations will be on 160 through 10 meters using CW, SSB and the digital modes. QSL via JG2BRI, direct or electronically using Logbook of the World. No bureau cards will be accepted.

Lastly, AA9A will again be active from Antigua between February 11th and the 20th using a new callsign V24A. Operations should be on 160 through 10 meters using CW, SSB and possibly RTTY. QSL via his home callsign either direct or using the bureau.

**

THAT FINAL ITEM: CUBESAT DESIGNER INTERVIEWED ON SWEDISH RADIO

And finally this week, a Swedish radio show recently featured an interview with Hojun Song, DS1SBO, about his O-S-S-I CubeSat. The broadcast took place on Monday, November 26th and dealt with the Maker and Hacker movement that continues to take the world of home construction by storm. This included the item on DS1SBO, and the CubeSat that is to launch in April of 2013. Here Song discusses his philosophy in developing the OSSI bird:

--

DS1SBO: ".The point of my project is to freeing all of the technologies that is used in the satellite."
--

The entire program can be downloaded as an MP3 file at inyurl.com/ossi-cubesat-interview. While Song speaks in English the rest of the show is entirely in Swedish. The interview with DB1SBO begins at about 1 minute and 20 seconds into the show. (Southgate, audio clip from sverigesradio.se)

I just put up my 1st website & i'm looking for any ideas or changes I should make. Its free to list & I plan on keeping it free!!!
Electronics related only.

I've been into electronics all my life from making pcb's & building synths as a teen, Selling parts at Ham conventions, Rebuilding tube radios, pinball/arcade repair service centers, midi synthesizers/ keyboards & guitar-amps.
Over time I've bought out ops, dealers, houses filled with antique electronics etc. & I have accumulated a mass of parts,boards, equipment etc.
I'm 54 yrs old now & its time to clean out!!!

A year ago I listed a bunch of redemption parts online auction & they took all my ads down because I
didnt know what exact game they went to & that really pissed me off!! & the petty charges kept adding up. So I said I'd like to have my own site. Now I can list items & let them ride. I thought why not let others list as well.

When theres enough people I'll add the AUCTION button!!!

IF YOUR BORED & WANT TO HELP GET THIS STARTED--LIST A BUNCH OF STUFF!!!

everybodyslist.com

Thanks for your time & MERRY CHRISTMAS!!!
Carrol
AKA Carl

Ham Radio Deluxe v6.0 Holiday Preview/Beta 2 Announcement

Posted: 20 Dec 2012 09:38 AM PST
http://forums.qrz.com/showthread.php?372789-Ham-Radio-Deluxe-v6-0-Holiday-Preview-Beta-2-A
nnouncement&goto=newpost

HRD Software, LLC announces the release of Ham Radio Deluxe 6.0 Holiday
Preview/Beta 2 for our paid userbase. Key to paid users were sent out
today.

Mike Carper, WA9PIE, said, ☐We decided to go ahead and let the paid users
have an advance copy of the software. While some of the features are
incomplete, the majority of the major features hams have asked for are in
this release. Rick, W4PC, and Erik, KC0WWC, have been focusing on the code
and the beta sites have helped us get to this point. This has been an
enormous job, as the HRD suite has over 1,000,000 lines of code. With over
35,000 minor bug fixes and over 1,500 major bug fixes, the 5.X code-set was
the launch point for 6.0 and this allowed us to have a solid base for
adding new features.☐

The Holiday Preview/Beta 2 will be release to the paid users the evening of
December 20th, 2012, providing no major issues will occur.

Rick Ruhl, W4PC, said, ☐So many in the user-base want to use some of the
new features, we felt it was time to let them have at it. Microsoft has
had great success with their preview programs that we followed suit.

While we□re nowhere as big as Microsoft, (even though we are always compared with them!), we□re doing our best to provide a solid product. And if a paid user doesn□t want to download the Preview, they can stick with 5.24.38 until the full release. We know the software has open issues and some things are not complete, but a list of those will be on the website at http://ham-radio-deluxe.com□

Support for the Holiday Preview/Beta 2 will be in a special category in the support forums. Support for the beta will be provided via the HRD forums, as many hams may run into the same issues and the solutions will be discussed in the forum. HRD will also provide email and support tickets for the 6.0 Preview/Beta 2. We will be closely monitoring the forums for any major issues and will be resolving those quickly.

Version 6.x will has many new features including FSK support, a new QSL and awards tracking interface, improved cluster filters, label printing, and the Super Sweeper RTTY and PSK in Digital Master. Super Sweeper will allow multiple signals to be decoded in a single window.

Previews for Version 6.x are also provided on our YouTube channel:

http://www.youtube.com/hrdsoftware

You can purchase and download the product at
http://www.ham-radio-deluxe.com.

HRD Forum: http://forums.hrdsoftwarellc.com

WIANEWS WEEK COMMENCING DECEMBER 23 2012.

WIA Presidents Christmas broadcast

WIA Director Trent VK4TS with Awards and Contests

WIA HELPS OUT WITH VI4ASJ

THESE STORIES AND MORE IN THIS EDITION OF NEWS FROM THE WIRELESS INSTITUTE
OF AUSTRALIA FOR WEEK COMMENCING DEC 23 2012.

WIA Presidents Christmas broadcast

In this Christmas broadcast it's customary for the WIA President to thank all
the staff at the WIA office and the very many volunteers who have done so
much work during the year to keep the wheels turning.

This has been a particularly difficult year for the WIA with the untimely
passing of our late president Michael Owen VK3KI, but with a lot of hard work
and dedication from everyone involved we have come through this transitional
period in great shape.

I would like to recap some of the achievements of this past year, and in the
first broadcast next year I will tell you about some new initiatives that we
hope to achieve during 2013.

The ITU, the IARU, and the ACMA are where the rubber really hits the road in the WIA's advocacy role for Amateur Radio. They are difficult, time consuming, and expensive, and often go unnoticed by members, but they are the most important work the WIA does for amateur radio, and all radio amateurs, worldwide, benefit.

ITU Working Group 5 looks after amateur radio issues, and this year Dale Hughes (VK1DSH) attended an important working group meeting in Geneva. Among other things, that working group investigated the feasibility of a new Amateur secondary allocation at 5.3MHz. Dales work was long and arduous, sitting in endless meetings and negotiating with various countries representatives, but he must have made an impression because he has been asked to act as chair of the ITU sub committee looking after the 5.3MHz issue.

Slightly closer to home, Geoff Atkinson (VK3TL) and Peter Young (VK3MV) represented the WIA at the IARU Region 3 Conference in Vietnam. The Region 3 conference is a further opportunity to strengthen relationships between IARU member countries, in particular, this year sharing experiences with emergency communications. What is obvious from this meeting is the burgeoning expansion of amateur radio in some Asian nations, especially China and Indonesia.

Back home, the WIA was successful in its lobbying of the ACMA for a high power trial. To date some 230 radio amateurs have participated in the 1kW trial. The WIA is working very closely with the ACMA on the Assessing the results of the high power trial, with particular emphasis on interference and EMR issues.

By the way, those radio amateurs participating in the high power trial need to listen out carefully for important information to be released shortly.

There many other areas where the WIA is working closely with the ACMA to improve the operating privileges for radio amateurs, for instance the WIA has drafted changes to the Amateur regulations (the LCD) to introduce a new (secondary) band allocation at 472 to 479 kHz, and work continues on many other issues.

Particular thanks to Peter Young VK3MV for his work with the ACMA.

For most people Amateur radio is about operating. During 2012 the Awards Group was reformed and there is now a good flow of new Awards applications, and they are all being processed quickly.

The contest group introduced a new format for the RD Contest - a log checker has been created, and that is a great step forward for volunteers as it saves a massive amount of time cross checking logs. In the past only random spot checking was practical however, now, all contacts in a log are properly checked.

The National Inwards QSL Bureau has had another busy year, sorting cards from all corners of the globe, for distribution to the State Bureaus for on forwarding to WIA Members as expeditiously as possible.

Members in NSW will have been watching the tower issue unfold on the WIA website and in this broadcast. Roger Harrison VK2ZRH has been assisting the

WIA to put the strongest possible case to the NSW Government for a relaxation of the quite rigid planning restrictions which apply to antenna masts and towers in that State. This work is continuing and further action is planned for the New Year.

All members would appreciate the improvement in quality of AR magazine. The publications committee has done an excellent job of producing a fine journal, as has the WIA Broadcast group in their tireless effort in putting this WIA broadcast together, week after week.

Earlier this week we announced the results of the 2012 Club Grants Scheme. Congratulations to all those successful applicants, and our thanks go to the Club Grants Committee.

We can't forget the volunteers that support the training of prospective radio amateurs, and the WIA's RTO Fred Swainston. Without their massive contribution there would be no new radio amateurs to carry the hobby forward.

And I've only touched the surface. Volunteers also serve on our technical and advisory committees, our bookshop and our library and archive, the affiliated clubs insurance scheme, not to forget our long suffering webmaster.

So, I have highlighted just a few of the year's achievements. It's been a busy year but a sad one with the passing of Michael Owen. The Next Year is looking to be even busier, so in the next broadcast I'll tell you something about the changes your WIA Board plans to introduce.

Until then, have a very happy and safe Christmas, look after yourselves - we need you all fit and well and on-air for the New Year.

And once again, from your WIA Board, thanks to the WIA office staff and all the volunteers who have achieved so much in the past year.

This is Phil Wait, VK2ASD for the WIA

YOU WANT SPAM WITH THAT?

The ACMA has given McDonald's Australia Limited a formal warning under the Spam Act about a 'send to friends' facility on the McDonald's Happy Meal website.

An ACMA investigation found emails sent using the 'send to friends' facility (which promoted games and activities) were sent to friends of users without ensuring the friends' consent. The messages also did not have an unsubscribe facility, as required by the Spam Act.

(wia/acma)

Queensland's Newman Government has taken another step towards improved internal telecommunications, shortlisting three parties to develop the Government Wireless Network.

Treasurer and Minister for Trade Tim Nicholls said Projects Queensland had received five expressions of interest from parties wanting to take

part in the project, with three chosen for the next phase of the procurement process.

The three shortlisted parties are:

Broadcast Australia Infrastructure Holdings (including Airwave Solutions and Leighton Communications)

Telstra (including Motorola Solutions Australia)

Queensland Wireless Network Consortium (including Harris Corporation, CSC and Brookfield Infrastructure)

The primary objective of the Government Wireless Network is to deliver an enhanced digital radio voice and narrowband data communications network for Queensland's public safety agencies.

The Queensland Government is planning to select its preferred proponent midway through 2013, with the first stage to be completed in time for the G20 leaders' summit in 2014.

(wia/Media Contact: Treasurer's office 3224 6900)

Anniversary of last Morse code telegram

On December the 13th, 1962, the last telegram and its reply were sent by Morse code in New South Wales.

In a 50th anniversary re-enactment, former Telegraph Operator Phil McGrath travelled to Bombala to send and receive souvenir telegrams to mark the occasion.

At the time, Mr McGrath sat at the sounding box and typewriter and received what was originally meant to be that all important final message.

It read: 'This telegram from Sydney to Bombala is the last message which will be sent by morse in NSW, concluding 104 years of operations. Henceforth telegrams to and from Bombala like all other offices in this state will be transmitted through the teleprinter perforator switching system (TRESS).'

Not to be outdone, Bombala's then postmaster Stan Blyton, sent a 50 word reply that read:

'My privilege personally transmit last message from last morse station NSW. Key being forwarded you relic was in use Nimmitabel 1919 where I joined service remained there in use till station closed 1960. Behalf old telegraphist and morse operators we bow to progress.'

The TRESS system, based on the teleprinter, lasted until October 1933 when it ceased its text messages, first giving away to individually owned Telex machines and then the internet email.

(Jim Linton VK3PC)

UNIVERSITY

Hi, this is Ed from the Central Coast ARC.

This great hobby of ours has several facets, one of which is contesting. Have you ever been interested in getting involved in contesting and not know where to start? All those special routines and rules and how can I actually get through that pile-up and work the station?
Well, these are the questions I asked as well and part of the reason that I am helping to organise a mini contest university at the Wyong field day.

The Dayton contest university has been going several years and is world renowned and very kindly Tim K3LR from that event has supplied me with all the material from last year's event and said go ahead and use what you wish.

What we're doing is a short one day university on the day before the field day so on the 23rd. of February 2013. This will cover an introduction to contesting, what to do, what not to do, how to use logging programs - the basics if you like.

I think this will be very valuable to a lot of people who are sat on the sidelines at the moment thinking "I'd like to be into contesting but all these other guys know better and do better than I do". IT DOESN'T MATTER! Just take part - it's the fun of it.

As you know the Wyong field day is the largest gathering of radio amateurs in the Southern Hemisphere, so why not make a weekend of it?

Come for the Mini Contest University on the Saturday and stay for the field day on the Sunday.

For accommodation the website lists local hotels and motels, some of which give discounts to field day attendees, also on the website you'll find links to lots of attractions on the Central Coast for any member of your family who isn't interested in Amateur Radio.

Please register if you are coming to the (free) mini contest university as capacity is limited. You'll find details of how to register also on the website which is fieldday.org.au

73, Good DX and see you at Wyong! This is Ed VK2JI.

Wyong Contest University http://www.ccarc.org.au/wp/

WIA AGM

Have you prepared for the last weekend in May; the 2013 WIA AGM and Conference?

If you've built a new gadget, written some software, engaged in research or achieved something, we'd like to hear from you. Tell us about your successes and your failures. Register your topic now and use the opportunity to connect with other Amateurs who share your passion and excitement.

The 2013 WIA AGM and Conference, it's all about Engaging, Learning, Appreciating, Socializing and Discovering.

You'll find all the information online at the VK6 conference site, conference.vk6.net

WIA HELPS OUT WITH VI4ASJ

In advice received from WIA Director, Bob Bristow, VK6POP, the Wireless Institute of Australia is sponsoring the VI4ASJ activity by supplying access to the QSL Bureau. This is a great boost to the amateur radio activity and the WIA logo will be proudly displayed along with the AJ2013 logo on the QSL card.

While the majority of us will be looking forward to a rest break, the volunteers preparing for the National Scout Jamboree, on the Fraser Coast will be juggling their time and family engagements. Getting the site ready for the first contingents is the priority as the hot weather engulfs the east coast of the continent. Members of the Maryborough Electronics and Radio Group are organising a formal roster, now that names are in. Equipment is being organised and readied for use and transport to the Jamboree site.

For amateurs attending AJ2013, the frequency for Echo/IRLP access will be 145.400MHz.

Peter, VK3AJ, is towing the trailer equipped with 2m and 70cm repeaters, from Melbourne to Maryborough, Queensland, about 2.5 thousand Kms by road. With the two operating positions, plus the JAM-FM low power broadcast station, the Main Hall area is going to be really "radioactive". Set up of the amateur equipment is pencilled in for 29th January to coincide with Peter's arrival.

The VI4ASJ operation is funded by the AJ2013 organising committee and supported by Maryborough Electronics and Radio Group, Inc., Sponsors for the station are Icom Australia who has donated an IC-718 as the main HF part of the station and now our own WIA.

The Jamboree runs from 2nd January to 12th and these are the days during which you can contact VI4ASJ.

Reporting for WIA National News, I'm Geoff Emery from MERG, Inc.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
www.hamcollege.com.au

Radio & Electronics School Releases Foundation training on any Android portable device

A few months ago the Radio & Electronics School posted a free Foundation Course on YouTube. That foundation course has proved to be very popular.

Ron VK2DQ from the School looked into the Google Analytics and was surprised to find that more than 60% of users of the course are doing so from portable devices.

"Perhaps we should make Foundation training application for Smartphone" Ron thought.

Well the people at RES have done it. There is now an Android application for the foundation licence. It's free!

Just go to Google Play Store at "play.google.com" and search for Radio & Electronics School.

You can download the application directly to your phone, tablet or other portable device. The course is in the same Video format as the well known Standard Course.

"We think this might be popular with young people and in particular for JOTA" Ron VK2DQ said, "We only released the application a few days ago and already there have been over 100 installs.

RES recommends that you use this application in conjunction with the publication "Your Entry Into Amateur Radio available through radio clubs and the WIA.

EMDRC Christmas Foundation Course

The Eastern and Mountain District Radio Club will once again be running its special Christmas Foundation course.
The course will be run on Thursday the 27th of December with the assessments taking place on the morning of Friday the 28th of December

The course will be held at our EMDRC Clubrooms located at 13a McCubbin Street Burwood, for those not familiar with the area, its location is very close to the RSPCA on Burwood Highway, ideal if you plan on coming by public transport. If you are coming by car, there is plenty of parking available onsite.
To arrive at the clubrooms, simply drive west down McCubbin street and look for the lane way on your left hand side, you will find the clubrooms (Scout Hall) at the bottom of the lane way.

The course instructors will be myself Robert Broomhead VK3DN and Damian Ayers VK3KQ.
The Sunday morning the assessments will be run by myself with Keith VK3FT and assistance from other assessors..

Further details on the EMDRC club website http://www.emdrc.com.au

INTERNATIONAL NEWS With thanks to IARU, RSGB, SARL, Southgate AR Club, ARRL, Amateur Radio Newsline, NZART, ARVictoria and the WW sources of the WIA.

In ZL Land a recent membership promotion has been a great success.

A total of some 3,000 letters were posted to all those who were not presently members of the Association, some 236 amateurs have now taken the opportunity to join with this special promotional offer. Of those, 115 are newcomers to the Association, with 121 re-joining the NZART after a lapsed period.

The Canadian federal telecom regulator is aiming to close potentially dangerous technological gaps in Canada's 911 services.

The Canadian Radio-television and Telecommunications Commission has taken the first step in modernizing an emergency system that was created before mobile phones were invented.

The announcement comes as Canadians increasingly rely on cell phones - 10 per cent of households had gone "wireless only" by 2010, a trend that is expected to continue.

National commissioner Tim Denton, who has been appointed to lead the review and present preliminary findings in May, faces the daunting task of forecasting the future of an industry that changes faster than many companies can predict.

But he will also have to deal with the effects of Canada's digital divide: Large swaths of the Far North and Newfoundland and Labrador still don't have access to basic 911 services.

Among those that do have access, more and more people are turning to social media sites, such as Twitter, to seek emergency help.

Explosion at Derna (Libya) radio station, police attacked on arrival

Derna local radio was hit by an explosion in the early hours of Monday morning last, with the blast also damaging the office of a local television station situated nearby.

The assailants subsequently launched an attack on the town's police chief, Colonel Mofed Abd Al-Hafid, along with a colleague once they arrived at the scene. The police officers came under fire but escaped uninjured.

A Derna resident informed the Libya Herald by telephone that radio and television broadcasts had been stopped as a result of the incident.

The attackers, whose motive and identity remain unknown, succeeded in escaping the scene.

Barcode inventor dies

Norman Woodland who co-created the barcode using Morse code, has died at his New Jersey home at the age of 91.

He worked with university classmate Bernard Silver to create the now ubiquitous thick-and-thin-line system in the 1940s.

The BBC reports that the system was patented in the US in 1952, a patent that was later sold for just $15,000.

Barcodes Inc. report that Norman Woodland used the Morse code to create the barcode when he "just extended the dots and dashes downward and made narrow lines and wide lines out of them."

Global amateur radio fest begins

Peninsular News reports the Qatar Amateur Radio Society are hosting the event for the first time in the Middle East.

Hundreds of officials of various amateur radio societies around the world as well as secondary students and boy scouts from Qatar are attending.

Among those attending is AMSAT-DL President Peter Guelzow DB2OS who gave a presentation about the AMSAT P3E and P5 missions.

The callsign assigned for the event is A71QND (Qatar's National Day).

==========

NEWS FROM ARNEWSLINE USA

APRS BALLOON LAUNCHED IN CALIFORNIA LANDS IN MOROCCO

A group of high altitude balloon experimenters have achieved a milestone. This with confirmation that their K6RPT-12 APRS equipped high altitude balloon has successfully crossed the Atlantic and landed in Morocco. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Amateur radio stations from the United Kingdom to the Azores had been listening for the transatlantic balloon signing K6RPT-12 on 144.390 MHz FM. This after it was lofted skyward from California at about 0126 UTC on Monday, December 3rd.

The balloon was launched by the California Near Space Project team with the intent of it crossing the Atlantic heading for the British Isles. When it left the USA it was traveling at over 185 an hour but was believed to have slowed down in its over-water trek to as little as 55 miles an hour. Knowing this, the payload was designed for over 60 hours of flight. It also included a heating system for its 144.390 MHz FM transmitter developed by Jonathan Corgan, AE6HO, to prevent it freezing during overnight flight. This was because the bitterly cold night temperatures at that altitude have caused the transmitters on several amateur radio balloons to fail.

After its journey across the Atlantic its APRS signals were first picked up by stations in Spain. It was last heard at 09:22:31 UTC on December 5th descending rapidly, indicating that the balloon had finally burst. Its last recorded position was 34°25.75' North and 3°58.96' West placing it in the Taza Provence of Morocco

North-North East of Tazekka National Park.

It is believed there are less than 150 radio
amateurs in Morocco and no known APRS stations.
As such the balloon and its payload may never be recovered.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

It should be noted that the amateur radio APRS
frequency is not standardized world-wide. The
United States uses 144.390 MHz while the British
Isles and Europe use 144.800 MHz. To see the See
the K6RPT-12 APRS reported flight track please
take your web browser to tinyurl.com/k6rpt-12 on
the World-Wide-Web.

==========

OPERATIONAL NEWS - DATELINE 2013

Here in VK it's time for the WIA Summer VHF UHF Field days, and
in ZL in Feb it's their annual Jock White Memorial Field Day Contest
Sat and Sun Feb 23 and 24.

NOW IN SPECIAL EVENT STATIONS, DX and BEACON AND NET ADVICE
FURTHER ON OUR SUMMER FIELD DAY AND THE UNIVERSITY AT WYONG.

Wyong Contest University http://www.ccarc.org.au/wp/

Greetings this is Trent VK4TS the WIA Director for Awards and Contests

At the upcoming 2013 Wyong Field Day a new addition to the programme has
taken shape in the form of the Mini Contest University. This has taken its
format from the very successful programmes conducted by Tim K3LR

The MCU will be a day long affair on the Saturday prior to the Gosford Field
day and will conclude with an evening meal at a local eating house.

This is an opportunity for contesters Australia wide to catch up and also
offers a great opportunity for new contesters to learn from the more
experienced.

I will be presenting at the seminar and I am sure there are many that would
like to find out about the workings of WIA contests

Look forward to seeing you there - but a reminder that bookings are essential

2/

Summer VHF UHF Contests - this year the Ross Hull looks to be a great affair
- sunspots are up and down but expect some 6M fireworks in January and for
proponents of distance based scoring in contests here is your chance to prove
you like the distance format-

Both the Ross Hull and the Summer Field day make January a great month for the active contest operator

XV 0 VR Vietnam until 4 January.
Cat Ba Island (AS-132) from 18 - 20 December
Phu Quoc Island (AS-128) from 30 December - 2 January.
QSLs go via his home call DD0VR

Lastly, several sources are reporting that a team of 10 operators will be active from Robinson Crusoe Island during mid-2013. It was also mentioned that this is the same group who activated D64K earlier this year. Look for more details to be forthcoming.

MERRY CHRISTMAS FROM THE F-TROOP

What use is an F-call?

Amateur Radio is a social experience, an activity that invites and thrives on communication. As a participant in the hobby, either recent or long standing, there are many amateurs around who share your interests and can participate with you in your exploration of what amateur radio means to you.

These people who share your experiences are your own little amateur community and while it's safe to stay with those, you might consider that the hobby is a gateway into a wide range of experiences and disciplines, so your little view on the world is likely to benefit from interacting with new people.

As is common in our society, this time of year is traditionally used for reflection and in my learning about Amateur Radio, I'm using this time to reflect on the things I've learnt and the people I've met over the past 12 months. I have started with Morse, done some serious contesting, met a whole host of Amateurs from around the country, built a magnetic loop antenna, built my first electronics kit, learnt about software defined radio, started learning about transmission lines, remembered to enjoy myself and helped with all manner of club activities throughout the year.

The thing I remember most is spending time with other Amateurs and sharing the twinkle in their eye as they tell about their endeavours and contraptions.

What do you reflect on in Amateur Radio?

I'm Onno VK6FLAB

WW SPECIAL INTEREST GROUPS --- ILLW

ILLW attracts more entries

The leading countries in the next International Lighthouse and Lightship Weekend are Germany on 28 registrations, Australia with 27, followed by the USA and England.

A total of 110 registrations have been received so far from 26 countries, spanning the globe from Argentina to Wales.

Each of them will help promote public awareness of the former guiding lights for those at sea, promote amateur radio and foster International goodwill.

To find out more about this truly fun weekend or register for August the 17th and 18th, visit the website at www.illw.net

SPECIAL INTEREST GROUPS - VHF AND ABOVE

First contact between CT1DMK and VK3UM on 432.010 MHz

First contact between Doug MCArthur, VK3UM and Luis Cupido, CT1DMK via Moon bounce Communications on 432.010 MHz CW, was recorded on December 6.

The telegraphic message - VK3UM, CT1DMK 559/559 "loud and clear" - could be received by those stations equipped for EME on 432 MHz.

This communication achieved by 2 serious radio operators who invested a lot on Ham radio stations both in terms of perseverance and technical achievement. They inspire an entire generation and make our dreams possible with some work and preparation.

Luis Cupido, CT1DMK, is in fact a wonderful paradigm of technical know how for many of us. He has already a few interesting distance records to encourage a number of colleagues, like the world DX record of ever, while receiving one of the deep space spacecraft's, Voyager 1, at about 14698 million Km (3 times further away than Pluto) on April 4, 2006

Recently some of his contacts with us "down under" had a tremendous impact on those working moon bounce in this small corner of the world:

SPECIAL INTEREST GROUPS - LOW DOWN

SAQ VLF Transmission Christmas Eve

There will be an annual transmission with the Alexanderson 200 kW alternator on VLF 17.2 kHz from Grimeton Radio/SAQ on Christmas Eve, Monday, December 24.

The message transmission will take place at 08:00 UTC.

The transmitter will be tuned up from around 07:30 UTC.

QSL-reports are kindly received:

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been
recently revived by an active moderation team. We are currently seeking
suitable information, FAQ, and bulletin articles from the entire
rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our
newsgroup.

We are seeking a replacement maintainer for the following information
bulletin formerly posted to rec.radio.amateur.* (and currently archived
at http://www.faqs.org/faqs/radio/personal-intro/ ):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

One significant omission, requiring immediate updates, for this article |
is that it does not mention newer amateur radio newsgroups created since |
it was written, including: |

rec.radio.amateur.antenna |
rec.radio.amateur.boatanchors |
rec.radio.amateur.dx |
rec.radio.amateur.equipment |
rec.radio.amateur.homebrew |
rec.radio.amateur.moderated |
rec.radio.amateur.space |

We are willing to provide any technical support necessary to get this
article updated and automatically posted again at a regular interval.
This would include establishing contact with the original maintainer for
any necessary permissions. We would prefer to seek a new, dedicated
maintainer at this time, rather than start auto-posting the original
article ourselves.

For more information about our newsgroup, see:

SARL NEWS SUNDAY 23 December 2012

You are listening to ZS6SRL, the official radio station of the South African Radio League, the national body for amateur radio in South Africa. The SARL broadcasts a news bulletin every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream, visit www.sarl.org.za, click on 'Amateur Radio Today' and follow the links for details. For audio via Echolink, connect to ZS0JPL-R.

You can download this bulletin and previous ones from www.sarl.org.za and also subscribe there to receive future bulletins by e-mail.

Your newsreader this morning is (name), (call sign), on 145,725 from Pretoria, with relays on 7,066 MHz and 3,695 MHz SSB. (Other news readers change to suit).

SILENT KEY

It is with regret that it is announced that Darryl du Randt, ZS6DLD, was shot dead on 1st December 2012.

Our sincere condolences to his family and friends.

(PAUSE)

IN THE NEWS TODAY:

SARL PRESIDENT'S CHRISTMAS MESSAGE ON AMATEUR RADIO TODAY

SA AMSAT SPACE SYMPOSIUM - CALL FOR PAPERS

SARL ANTENNA DEFENCE FUND NOW OVER 50% OF THE R50 000 TARGET

You are listening to ZS6SRL. Stay tuned for more details on these and other important and interesting items.

SARL PRESIDENT'S CHRISTMAS MESSAGE ON AMATEUR RADIO TODAY

This morning the SARL President's Christmas and New Year Message will be transmitted on Amateur Radio Today. It will also be available in both written and audio format on the SARL web at www.sarl.org.za today.

In his Christmas message Rassie Erasmus, ZS1YT, said that amateur radio spirit is amateur radio's Ubuntu. He said that when Paul M. Segal, W9EEA, wrote the Amateur's code he gave real meaning to what is meant by amateur radio spirit. "Amateur Radio gives us this wonderful opportunity to reach out to many people and I urge you to do so on Christmas Day and New Year's Day. Make one or two contacts and wish the

other station and his or her family a happy festive season. From my family and I, I send you good wishes for a merry Christmas and Happy and prosperous New Year. Mag die wonder van Kersfees ook u en u familie aanraak. Ek wens u almal 'n Gese�nde Kersfees en 'n voorspoedige nuwe jaar toe."

Read the full message on www.sarl.org.za.

SA AMSAT SPACE SYMPOSIUM - CALL FOR PAPERS

The 2013 SA AMSAT Space Symposium will be held on Saturday 18 May 2013 at the Innovation Hub in Pretoria. This is the first call for papers. The theme of the symposium is Satellites- the new Amateur Radio Frontier. If you are planning to present a paper, send a brief outline to saamsat@sarl.org.za by 31 January 2013. For full details and the various deadline dates visit www.amsatsa.org.za.

SARL ANTENNA DEFENCE FUND NOW OVER 50% OF THE R50 000 TARGET

The SARL Antenna Defence fund has surpassed the 50% mark of the R50 000 target. On Friday the fund stood at R25 100. Radio Amateurs and clubs have rallied to support the SARL's campaign to have building and zoning regulations changed to enable radio amateurs to put up antenna structures under 15 metres without having to go through a lengthy process of applying for re-zoning and building approvals which are now required in most major centres of South Africa.

The target is to collect at least R50 000. Thanks to radio amateurs and clubs who have made contributions to the fund. Full details on the campaign and a list of donors can be found on www.sarl.org.za, select Antenna Defence Fund from the left hand menu on the home page.

THE BPL-PLT WAR: DARC TO HOLD STRATEGY MEETING ON THE DANGERS

On Saturday, 12 January 2013 the Deutscher Amateur Radio Club (DARC) will be sponsoring a one-day workshop dealing with the possible hazards to amateur radio from electromagnetic power lines. The workshop slated for the DARC headquarters in Baunatal will cover all aspects of power line Internet transmission and its likely effects on amateur radio operations. The SARL is keeping a keen eye on the outcome of the workshop.

South Africa has no PLT regulations, they are still in draft form. The draft can be downloaded from www.amateurradio.org.za/PLT Standard Notice.pdf.

SARL MEMBERS GET DISCOUNT ON ARRL BOOKS

The SA Amateur Radio Development Trust has a large number of ARRL books in stock. Details are available on www.amateurradio.org.za. SARL members qualify for a discounted rate. On the web site there are two order forms. If you an SARL member, download the SARL Member order form and you will see the discounts available. Currently the two most

popular books are the 2013 Hard cover ARRL Handbook and the Hard cover Antenna Book. If you are planning to write the Radio Amateur Radio Examination in May next year, the ARRL Basic Radio is the ideal book to assist in your studies.

IARU NEWS

Two new societies have joined the IARU as members. On 1 November 2012 voting was completed on the admission of the Federation of Radio Sport of Azerbaijan (Proposal No. 247) and St. Vincent & Grenadines Amateur Radio Club (Proposal No. 248) to IARU membership. With 53 affirmative votes required for approval there were 60 votes in favor of Proposal No. 247 and 61 votes in favor of Proposal No. 248. Accordingly, both proposals were adopted.

COMPETITION NEWS

In the last Sunday's bulletin it was erroneously stated that ZS6PAM took 2nd overall position in the PEARS HF DX CONTEST of 11th November 2012. The 2nd position is in fact occupied by Pam Momberg, ZS6APT. Our sincere apologies to both Pam and ZS6PAM. Congratulations to Pam, ZS6APT.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low to moderate levels. All three visible Sunspots are currently stable. There is no chance for strong solar flares at this time.

For those who want to do their own frequency predictions, the expected effective sunspot number for the week will be around 67.

All the bands from 20 to 10 m will provide lots of DX fun with 15 m providing the best openings with 20 m not far behind. There will also be frequent 10 m openings.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS 31 January 2013 - Last day for submission of nominations for councilors for the next term and motions for the 2013 AGM. 31 January 2013 - Last day for submission of a brief outline of a proposed paper at the SA AMSAT Space Symposium on 18 May 2013 to saamsat@sarl.org.za.

SARL News invites clubs and individuals to submit news items of interest to radio amateurs and short-wave listeners. Submit news items - if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp, not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to Amateur Radio Today every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area, with relays on 7 082, 7 205 and 17 760 kHz. There is also a podcast by ZS6RO. For a web-stream and Echolink by ZS6FCS, visit www.sarl.org.za, click on

'Amateur Radio Today', go down the green column and click on 'LISTEN ON THE WEB'. A repeat transmission can be heard on Mondays at 18:30 UTC on 4 895 kHz ((A new time and frequency!). Reception reports are invited. We are particularly interested in reports of the 4 895 kHz transmission on Mondays at 16:30 UTC as the frequency is close to the proposed new amateur allocation near 5 MHz. Reception reports from all areas in South Africa would be useful in our bid to ICASA for frequencies pilot studies. Send reports to artoday@sarl.org.za.

Sentech sponsors the transmissions on the non-amateur frequencies.

The SARLNEWS team wish all our readers and listeners a Merry Christmas and a happy New Year. We will be back with another news cast next Sunday 30 December 2012.

You have listened to a bulletin of the South African Radio League compiled and edited by George Honiball, ZS6NE.

Thank you for listening, 73.

/EX

http://forums.qrz.com/showthread.php?372860-Amateur-Radio-Newsline-Report-1845--December-21-2012&goto=newpost

Normal 0 MicrosoftInternetExplorer4
Amateur Radio Newsline☐ Report 1845 ☐ December 21 2012

Amateur Radio Newsline report number 1845 with a release date of
December 21, 2012 to follow in 5-4-3-2-1.

The following is a QST. New Zealand approves a Digital amateur radio repeater to test compatibility with other radio services; the United States says no to a new I-T-U treaty to govern the Internet; the Dutch military wont give up 915 MHz for unlicensed short range devices; and a new eye on the sky down-under will warn of solar eruptions. Find out the details are on Amateur Radio Newsline☐ report number 1845 coming your way right now.

RADIO COMPATIBILITY: NEW ZEALAND ATV REPEATER TO TEST COMPATABILITY WITH
COMMERCIAL BROADCASTING

In what may be a first anywhere world-wide, a New Zealand amateur radio service digital ATV repeater has been given a chance to test its compatibility with commercial broadcasters. Amateur Radio Newsline☐s Jim Meachen, ZL2BHF, reports from down-under:

--

New Zealand Radio Spectrum Management or RSM has granted the first
Digital Amateur TV License to NZART Branch 74, the Wellington VHF Group,
for use at its main station located on MountBelmont, in Wellington.

The main features of License 236831 are: Digital TV Channel 25 (DTV25);

502 MHz to 510 MHz; DVB-T format; 7.7 MHz emission bandwidth; 100 Watts
mean effective isotropic radiated power and horizontal polarization

The license is valid for an initial period of 6 months, from 1st January
2013 to 30th June 2013.

The license permits DATV transmissions for the purpose of testing compatibility with services on the adjacent frequencies and requires the production of a comprehensive report to RSM.

The DTV25 channel is, in effect, the guard band between Communications services below 502 MHz and Digital TV Broadcasts above 510 MHz (DTV26 and above).

It is hoped that these tests will, once again, demonstrate the engineering capabilities of Radio Amateurs and lead the way to the granting of DATV licenses throughout New Zealand.

For the Amateur Radio Newsline, I☐m Jim Meachen, ZL2BHF, in Nelson, New Zealand.

--

If the test proves successful it holds the potential of opening up a new concept in channel sharing between amateur radio and other telecommunications services. (ZL2BHF)

**

RADIO LAW: FOLLOW-UP ☐ US SAYS NO TO DUBAI INTERNET TREATY

A follow-up to last weeks story regarding that confrontational meeting in Dubai to discuss the future of the Internet. As the gathering drew to a close the United States joined 20 other counties in refusing to sign a treaty that they say will harm Internet freedom.

The final proposal was forged at an international communications conference that ended Friday, December 14th. A major problem of the treaty produced by the 193 nation International Telecommunications Union was its endorsement of greater control over the Internet by governments.

United States Ambassador Terry Kramer said that rejecting the treaty was an obvious direction for the U.S. delegation to take. He told the media that there were too many concerns that were problematic for the nation.

AS reported last week, one issue troubling the United States is language extending the treaty to Internet Service Providers and private network operators, as well as governments. The United States believes this would invite greater government control of the Internet. The same is true of provisions in the treaty to fight cybercrime. According to the U.S. delegation the broad powers designed to increase network security could too easily be abused by governments.

The chair of the World Conference on International Communications is Mohamed Nasser Al-Ghanim. He disagreed with the dissenting countries noting that their concerns are addressed in the text. Al-Ghanim said that special provisions were written into the treaty to say that content is excluded and that he Internet will continue to express freedom of thought as it has.

If the Dubai conference showed anything, it's that a major schism exists between the developed nations and much of the ITU over Internet issues. Some believe this could result in a second, more strictly regulated Internet emerging, although experts acknowledge that would be difficult to actually create.

The final version of the treaty goes into effect in 2015, but without the signatures of many of the Internet super powers, its effect is likely to be minimal at best. (Various Internet news sources)

**

RESTERUCTURING: DUTCH MILITARY STILL INSIST ON 915 MHZ

With almost 42 CEPT nations reporting that 915 to 921 MHz is empty, or emptying, it is hoped the band will soon be made available for Short Range Devices or SRD□s.

An article by Bill Ray in UK newspaper The Register implies that the Dutch military appear to be just about the only obstacle to 915 to 921 MHz being available for Short Range Devices use on a world-wide basis.

To date there has been no globally available license exempt spectrum for Short Range Devices available between 42 MHz and 2.4 GHz. In some countries such as the United Kingdom, spectrum at 433 to 435 MHz has been used as a stopgap move. However this has caused considerable interference to other existing licensed services. (UK Register, Southgate)

**

RADIO FROM SPACE: NORTH KOREA SATELLITE ATTAINS ORBIT BUT NOBODY HAS HEARD IT TRANSMIT

North Korea appears to have successfully launched a satellite into space through the use of its Unha 3 satellite launcher, but may have lost control over the bird soon after it attained orbit.

As reported by several news outlets, according to U.S. officials, the satellite which was launched by North Korea on Wednesday, December 12th is now believed to tumbling out of control in an uncontrolled orbit and nobody is quite sure what the spacecraft's purpose or capabilities are.

North Korea lofted the spacecraft on the long-range rocket from its Sohae Satellite Launch Station on the nation's northwest coast. The launch was detected by United States missile warning systems. NORAD, the North American Aerospace Defense Command said the Unha-3 rocket's first stage fell into the Yellow Sea, while the second stage fell into the Philippine Sea. It went on to state that the missile deployed an object that appeared to achieve orbit.

According to the ITU the North Koreans have so far not specified the type or format of the data or video transmissions it plans to make through the satellite although said it expects the transmissions to continue for up to 2 years. Currently the only claim from North Korea is that the bird is transmitting music on either 470 or 479 MHz but so far no monitoring

stations have reported hearing this new bird or its sound. Similar claims were made in 1998 for another North Korean orbital launch attempt that is believed to have failed. (Space.com and various news sources)

**

HAM RADIO NEAR SPACE: END OF THE WORLD TRANSATLANTIC HIGH ALTITUDE BALLOON PREMATURELY BURSTS

The transatlantic crossing attempt by an amateur radio balloon carrying an 18 MHz PSK beacon ended over the coast of Mississippi when the balloon prematurely burst.

The ham radio balloon called BLT-32 carried a PSK 31 transmitter on 18.100 MHz. It was due to be launched late Saturday, December 15th from near Sugarland, Texas with its destination aimed at Europe. According to reports it only made it a few hundred miles.

The South Texas Balloon Launch Team had joined the N0D End of the World Special Event with the launch its high altitude 'floater' balloon with hope of it reaching Europe before the End of the World took place as described in one Mayan calendar. And in keeping with the theme of the event the beacons and APRS tracker on the balloon were to use the N0D call sign. N0D meaning Now Zero-Days. And it was a case of Now Zero-Days for this ham radio balloon flight.

As reported last week a similar ham radio floater balloon launched by a group in Northern California dis make it across both the United States and the Atlantic Ocean before descending in Morocco. (Southgate)

**

ENFORCEMENT: UK REGULATOR OFCOM SUPPORTS INVALIDATED EXAM

The United Kingdom□s Radio Communications Foundation or RCF has announced that telecommunications regulator Ofcom has supported its decision to disallow an amateur radio examination in Northern Ireland.

According to a statement on the RCF, the Ofcom findings were that there is no hard evidence of wrong doing by the club or candidates but nevertheless the examination results were considered unsafe. Also that the suspension of the club concerned from running examinations was appropriate in the circumstances but it is now free to resume this activity.

The Radio Communications Foundation has offered a free re test to both of the candidates whose exam was invalidated. (Southgate)

**

BREAK 1

Wishing you a truly great holiday season, from the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the W4CN repeater of the Western Radio Transmitting Society serving Louisville, Kentucky.

(5 sec pause here)

**

ENFORCEMENT: FCC AFFIRMS $16000 FINE FOR OUT OF BAND OPERATION

Back in the USA, the FCC has affirmed a $16,000 fine issued to a radio amateur for his alleged operating on a frequency reserved for government use only. We have the details in this report:

--

Recipient of the monetary forfeiture order is Joaquim Barbosa, N2KBJ, of Elizabeth, New Jersey, whom the FCC says operated a transmitter on the frequency 296.550 MHz without Commission authorization.

In his own defense Barbosa who holds an Extra class license, filed a response to the original Notice of Apparent Liability. In it he admitted to operating a radio transceiver on the frequency 296.550 MHz but contended that that cancellation or a substantial reduction of the then proposed $20,000 forfeiture is warranted nonetheless for several reasons. First that he reasonably believed that he had authority to operate on the frequency 296.550 MHz. Second, that his constitutional rights had been violated. Third that the unlicensed operation did not cause harm or interference. Forth that the forfeiture amount is not supported by case precedent and lastly that there are other factors such as his cooperation with the investigation, inability to pay, and prior history of overall compliance with the rules.

But the FCC bought only one of Barbosa□s arguments. In issuing its final order it agreed that a reduction of the forfeiture amount was warranted based on its review of the record and finding that Barbosa, prior to this investigation, has a history of overall compliance with the Commission□s rules. So after consideration of the entire record including Barbosa□s response to the initial Notice of Apparent Liability that it was going to knock $4000 of the now affirmed fine and reduce it to the $16000 level.

For the amateur radio Newsline I□m Heather Embee, KB3TZD, near Berwick, Pennsylvania.

--

As this is now an affirmed fine, Barbosa was given only until close of business on December 31st to pay it or the case may be referred to the U.S. Department of Justice for enforcement of the forfeiture pursuant to Section 504(a) of the Communications Act. (FCC)

**

ENFORCEMENT: FCC REDUCES FINE ISSUED TO NY UNLICENSED BROADCASTER

The FCC has issued a Memorandum Opinion and Order that in part grants and in part denies a Petition for Reconsideration filed by Dexter Blake of Mt. Vernon, New York. This in regard to a $10,000 Forfeiture Order issued to him for willfully and repeatedly operating an unlicensed radio broadcast

station.

On March 3, 2009, the Enforcement Bureau□s New York Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Blake for operating an unlicensed broadcast station on the frequency 101.5 MHz in Mount Vernon, New York. Blake did not file a response to the proposed fine. As a result on July 22, 2010, the Enforcement Bureau issued a Forfeiture Order affirming the findings in the Notice of Apparent Liability and assessing the $10,000 forfeiture.

That apparently got Blake□s attention after which he filed his petition for reconsideration. In it, Blake admits to having operated the unlicensed station, but claims that cancellation is warranted because the individual from whom he received the equipment did not advise him that he needed an FCC license. In addition, he requested a reduction or cancellation of the forfeiture based on his inability to pay.

Now, after what it calls a careful review the FCC issued its decision on December 13th. In it, the agency said that although Blake concedes operating an unlicensed radio station that it is a violation of Section of the 301 of the Communications Act. Therefore it declines to cancel the forfeiture on this basis. However it does agree with Blake that the $10,000 amount would constitute a financial hardship and as such has lowered the fine to $1700.

Blake was given 30 days to pay the reduced fine or the case may be referred to the U.S. Department of Justice for further enforcement.

(FCC)

**

RADIO LAW: FCC SAYS HAWAIIAN CABLE OPS MUST CARRY KLEI TV

The FCC says that two cable television stations in Hawaii must carry a particular station even though neither wants to. Amateur Radio Newsline□s Don Wilbanks, AE5DW, has the rest of the story:

--

The FCC has denied a request by Oceanic Time Warner Cable and Hawaiian Telcom Services Company asking that they not carry KLEI TV on their respective systems. The station, under new ownership since 2011, asked for carriage, but the operators said no so KLEI then filed a must-carry complaint.

In part, the FCC agreed with the cable operators that the station could not argue historical carriage as neither had been carrying the station before it was bought in 2011. That□s when the new owners sought carriage or that it was delivering an over-the-air signal to any of the communities it sought cable carriage in. Those are two of the four tests for cable TV carriage.

But in this case the FCC took a different view. It said the absence of those two points was not sufficient to deny the station's request. The agency said that the unique characteristics of the Hawaiian market and KLEI's strong lineup of local programming of relevance to the inhabitants of Hawaii County and to all Hawaiians. Also that it□s foreign language programming targeted at special groups and residents, persuaded it to grant the carriage complaint.

Hawaiian Telcom Services Company had said that if it carried KLEI, it should not have to carry it on channel 6 in Honolulu. This is because it was already carrying station KBFD there. The FCC rejected that request as well. I t pointed out that it has clarified very recently that a digital station, generally speaking, is entitled to be carried on its former analog channel number. In this case KLEI was channel 6 and KBFD was 32.

I□m Don Wilbanks, AE5DW.

--

At airtime its not known if either the Hawaiian Telcom Services Company or Oceanic Time Warner Cable plan to file an appeal. (FCC. B&C)

**

THE BPL-PLT WAR: DARC TO HOLD STRATEGY MEETING ON DANGERS OF PLC / PLT

This note to our listeners in Germany. On Saturday, January 12, 2013 the Deutscher Amateur Radio Club will be sponsoring a one-day workshop dealing with the possible hazards to amateur radio from electromagnetic Powerline Transmission more commonly known in Europe as in-home P-L-T. The workshop slated for the DARC headquarters in Baunatal will cover all aspects of powerline Internet transmission and its likely effects on amateur radio operations. All DARC members wishing to attend are welcome. Interested parties are asked to pre-register by contacting Renate Stackebrandt by e-mail to r.stackebrandt (at) darc (dot) de. More is on line at tinyurl.com/GermanyDARC. (DARC, Southgate)

**

HAM EDUCATION: W5KUB.COM TO CARRY D-STAT LIVE NETCAST

Tom Medlin, W5KUB, tells us that all systems a go for the next live W5KUB.COM worldwide Internet broadcast. On December 29th at1500 UTC Tom will be presenting the D-Star Live netcast that will feature many experts on the mode as a part of the show. Using Tom□s interactive website you will be able to ask questions, and be a part of this program. Tom says that updates are available via his Facebook web page. Just join Facebook and then use the search task bar to locate the W5KUB Group page. Then just click to join. (W5KUB)

**

THE SOCIAL SCENE: SUPERSTITION HAMFEST RESCHEDULED TO FEBRUARY 19

Arizona's postponed Superstition Hamfest will now take place on Saturday, February 9th at Mesa Community College off of highway 60 in western Mesa, Arizona. The Superstition Amateur Radio Club, sponsor of the event that usually takes place in December says that it appreciates everyone's patience and once again apologizes for the inconvenience the rescheduling has caused. For more information please take your web browser to tinyurl.com/superstion-hamfest. An updated information sheet may be downloaded from the site in PDF form. (WB7C)

**

RADIO HAPPENINGS: SAQ VLF TRANSMISSION CHRISTMAS EVE

There will be a transmission from Sweden□s famed Alexanderson 200 kilowatt Very Low Frequency alternator on Christmas Eve. The transmitter will be tuned up from around 07:30 UTC with the message itself transmitted on 17.2 kHz at exactly 08:00 UTC on Monday, December 24th.

The Alexanderson alternator is located at the Grimeton Radio SAQ transmitter site. If you copy the message you are asked to send QSN reports via e-mail to info (at) alexander (dot) n (dot) se. You can also mail reports via the S M bureau. More information on the Alexanderson alternator is on-line at www.alexander.n.se. (Southgate)

**

RADIO HAPPENINGS: CRICKET CAM COMING DOWN-UNDER

FOX Sports reportedly will take broadcasting of cricket competition in Australia to a new level this summer. This with pictures to be broadcast from micro size cameras installed in helmets worn by batsmen and wicket keepers.

According to the WIA News, the equipment consists of a High Definition visor-mounted camera and transmitter with batteries on the rear strap. The additional weight on the helmet is only 250 grams, or about the weight of a bar of soap.

The can be fitted to any player's helmet during the game. Fox Sports believes it will be the first camera attached to a player during a Cricket match at this level. The technology is to be officially introduced in the Big Bash Twenty tournament.

For those unfamiliar with Cricket, it is a baseball like game played between two teams of 11 players. One team bats, trying to score as many runs as possible while the other team fields, trying to dismiss the batsmen and limit the runs scored by the batting team. The game is most popular in Australia, England, the Indian sub-continent, the West Indies and Southern Africa. (WIA News)

THE CHANGING OF THE GUARD: RADIO PIONEER RAY BRIEM, N6FFT □ S.K.

We seem to be using the words of the changing of the guard more often these days, and once again they seem most apropos. This with the word of the passing of broadcasting legend Ray Briem, N6FFT as we hear from Amateur Radio Newsline□s Bruce Tennant, K6PZW:

--

Anyone born or raised in the great American Southwest in the last half century likely knows the name Ray Briem. For some 30 of those years Briem who held the Amateur Service call letters N6FFT was called the host who owned overnight talk radio on Los Angeles station KABC A.M..

Born Leland R. Briem in Ogden, Utah, in 1930, Ray Briem first took to the radio airwaves at the age of fifteen. On August 14th, 1945 he was asked by a station manager to substitute for a staff announcer and with that his days in radio were off and running.

The highlight of Ray Briems career was when he came to KABC in 1967 where he held court over the nighttime hours until 1994. While he loved big band music and interviewed hundreds of celebrities his mainstay was talking with and to his listeners. And when he got involved in shortwave listening and then ham radio, several nights each year were devoted to talking about both of these topics. Frequent guests on those special shows included the late Lenore Jensen, W6NAZ, her husband Bob, W6VGQ and Lloyd Sigmon, W6LQ, who created the traffic alert system named in his honor known as the Sigalert.

After retiring from KABC, Ray Briem did a brief afternoon talk show on KIEV-AM. He received a star on the Hollywood Walk of Fame and in 2008 was honored for his contributions to broadcast radio by the Pacific Pioneer Broadcasters organization.

On a personal note, unlike some celebrities with call signs, Ray was more than a name in an amateur radio database. He was often heard on the local ham radio airwaves and I myself had many contacts great with him through the Catalina Island repeater. As always, be it speaking to hundreds of thousands over KABC, or in a one on one contact via ham radio Ray Briem, N6FFT, was a true gentleman and a friendly voice in the night that will be missed.

For the Amateur Radio Newsline, Im Bruce Tennant. K6PZW, in Los Angeles.

--

For a truly beautiful retrospective about Ray Briem, N6FFT, and his career we suggest that you read the article by fellow broadcaster Doug McIntire that appeared in the Los Angeles Daily News. You can find it at tinyurl.com/la-daily-news-briem. (ARNewsline□; K6PZW, published news reports)

RADIO FROM SPACE: NEW HUGE TELESCOPE TO WARN OF SOLAR STORMS

Astronomers say a new eye on the sky in Western Australia□s remote outback could potentially save the world billions of dollars. This by warning of a pending cosmic catastrophe.

The International Center for Radio Astronomy Research in Perth reports that the new Murchison Widefield Array radio telescope will give a dramatically improved view of the sun. This in turn should provide an early warning of explosive solar storms that can damage to communication satellites, electric power grids and GPS navigation systems.

In addition to its solar observations, the Murchison Widefield Array will offer scientists an unprecedented view of the entire history of the universe, including how the very first stars and galaxies formed.

(WIA)

**

WORLDBEAT: ZIMBABWE THREATENS TO JAM SHORTWAVE BROADCASTS

The South African nation of Zimbabwe thinks it should jam shortwave broadcasts from outside that nation□s borders. Newzimbabwe.com reports that at a recent Zanu PF party conference it was proposed to jam the signals of foreign-based radio stations such as Voiceof America□s Studio 7, Radio Voice of the People and South West Radio Africa that ruling party officials accuse of pushing a Western-backed regime change agenda in Zimbabwe.

But critics say such a move would deny the majority of people access to important alternative sources of information to make informed decisions. They argue that President Robert Mugabe□s party wants to continue its domination of the airwaves in order to maintain the status quo. But Zanu PF officials maintain these radio stations are breaking the Zimbabwe law and should be jammed. More is on-line at tinyurl.com/zimbabwe-jamming-threats. (Newzimbabwe)

**

ON THE AIR: NEW SUPER LOW POWER 80 METER BEACON FROM ITALY

On the air, keep an ear open on 80 meters for a new QRP level propagation signal. The Irish Radio Transmitting Society reports that a new European low power beacon is transmitting on 3574.5 Kilohertz using only 300 milliwatts. The callsign is IZ3NYT with diagrams and pictures at iz3nyt.altervista.org/gallery. Text is in the Italian language. QSN

reports go to IZ3NYT using eQSL or direct. (IRTS)

**

ON THE AIR: TC9SAM IN MEMORIAM OF THE ALLAHEKBER MARTYRS

If you contacted special event station TC9SAM between December 20th and the 24th you are being asked to QSL direct only. TC9SAM was to operate at the Turkish Scouting and Guiding Federation's National Conciousness Camp-In held in memoriam to the Allahuekber martyrs. The memorial is a traditional winter march to Allahuekber peak in eastern Turkey held in memory of the 60,000 patriots who were frozen to death while trying to reach the occupied Kars city in December of 1914. In accordance with the camp program operations of TC9SAM were mainly on 80 and 40 meter SSB. (TA1HZ)

**

DX

In DX, members of the Lufthansa Amateur Radio Club Frankfurt will be on the air from Vietnam from February 15th to the 26th. They will operate as XV2DLH and will be active on all of the High Frequency bands. QSL□s go via DK8ZZ.

JR1IZM who also holds the call V31IZ will be operational as 7P8ZM from Lesotho through January of 2013. He will be active on all of the High Frequency bands. QSL via JO1CRA

F6ITD will be on the air stroke FG from Guadeloupe and two islands between next February 1st and March 25th. He will be using SSB and the Digital modes during his stay. Logs will be uploaded to both ClubLog and Logbook of the World. QSL via his home call either direct or via the bureau.

GM3YTS, GM4FDM, GM0GAV and GM3POI will be operational as T2GM from Tuvalu between March 12th and the 23rd with their activity will be focused on Europe. The group now has a Web page available at t2gm.org. QSL via GM4FDM.

K1GI will be active stroke VP9 from Bermuda between December 29th and January 2nd. Operations will be on 160 through 10 meters using CW, SSB and the digital modes. QSL via JG2BRI, direct or electronically using Logbook of the World. No bureau cards will be accepted.

Lastly, AA9A will again be active from Antigua between February 11th and the 20th using a new callsign V24A. Operations should be on 160 through 10 meters using CW, SSB and possibly RTTY. QSL via his home callsign either direct or using the bureau.

**

THAT FINAL ITEM: CUBESAT DESIGNER INTERVIEWED ON SWEDISH RADIO

And finally this week, a Swedish radio show recently featured an interview with Hojun Song, DS1SBO, about his O-S-S-I CubeSat. The broadcast took place on Monday, November 26th and dealt with the Maker and Hacker movement that continues to take the world of home construction by storm. This included the item on DS1SBO, and the CubeSat that is to launch in April of 2013. Here Song discusses his philosophy in developing the OSSI bird:

--

DS1SBO: ☐ The point of my project is to freeing all of the technologies that is used in the satellite.☐

--

The entire program can be downloaded as an MP3 file at inyurl.com/ossi-cubesat-interview. While Song speaks in English the rest of the show is entirely in Swedish. The interview with DB1SBO begins at about 1 minute and 20 seconds into the show. (Southgate, audio clip from sverigesradio.se)

Blind Ham Receives Radio Gift From Fellow Hams

Posted: 20 Dec 2012 12:25 PM PST
http://forums.qrz.com/showthread.php?372812-Blind-Ham-Receives-Radio-Gift-From-Fellow-Hams&goto=newpost

http://www.va3xpr.net/blind-ham-receives-radio-gift-from-fellow-hams/

As everyone knows, the holiday season is all about sharing with others. And what could be better than to give the gift of ham radio! Just ask Heratch Toroian, a.k.a. ☐Rudie☐, VE3OUA, a longstanding member of the Scarborough Amateur Radio Club (SARC) in Toronto, ON, who recently received a brand new Yaesu FT-60 dual band HT from his fellow SARC members. Rudie, a visually impaired ham that uses his HT frequently, had been experiencing problems with his old Yaesu FT-60, which kept him off the air and prevented him from using IRLP & EchoLink on the VA3XPR repeater, one of his favourite modes of communications. So the good members of SARC thought they would help him and that☐s exactly what they did.

☐Rudie☐s radio just was dying out with time and Rudie has been a member of the Scarborough Amateur Radio Club for over 20 + years. Being a white caner with MS, he is a real trouper and the best friend the club could ever have☐ said Ralph Muecke, VE3VXY and President of SARC. ☐He really needed help and that☐s what a club is all about☐, Muecke added.

☐He just asked me to open my left hand and I was so surprised that he put another radio in my hand☐ exclaimed Rudie, about receiving the new radio from Ralph, VE3VXY.

So if you hear Rudie on the air over the holidays, be sure to tell him how good his new radio sounds.

Don

Ham Radio Operators Play Crucial Role During Weather Emergencies:

Posted: 22 Dec 2012 01:57 AM PST
http://www.eham.net/articles/29543

WHITE LAKE TOWNSHIP, Mich. (WJBK) -- Dangerous, even life threatening weather, it does happen in metro Detroit from summer storms and tornadoes to the winter storms that bring heavy snow, wind and ice. How many times have we seen widespread and long-lasting power outages when it takes days to have power fully restored? During these events when up-to-the-minute information can be spotty, especially in rural areas, a volunteer network of amateur radio operators jumps into action to relay crucial information. Even with the popularity of cell phones, the passion for ham radio is alive and well, and that's evident at the National Weather Service office in White Lake Township. Modern ham radios are very reliable and have mostly replaced the old tube types used for generations. During my recent visit to the National Weather Service, local operators were talking to fellow ham operators as far away as Florida, Texas and Puerto Rico.

New York City Ham Wins Appeal, Can Keep His Tower:

Posted: 22 Dec 2012 01:53 AM PST
http://www.eham.net/articles/29542

In September 2010, Paul Isaacs, W2JGQ, of New York City, obtained a building permit for his Amateur Radio antenna support structure, comprised of a 40 foot tower topped by a Yagi antenna. Isaacs installed his antenna system on the roof of his four story brownstone -- 58 feet above ground -- in lower Manhattan.

//
New Section Manager Appointed in New York City-Long Island:

Posted: 21 Dec 2012 10:08 AM PST
http://www.eham.net/articles/29539

Effective January 1, 2013, Jim Mezey, W2KFV, of Carle Place, New York, will be the new ARRL New York City-Long Island Section Manager. ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, appointed Mezey after consulting with current ARRL New York City-Long Island Section Manager Mike Lisenco, N2YBB. Lisenco, who will step down as Section Manager on January 1, was elected as ARRL

Hudson Division Director last month.

The following is a QST. New Zealand approves a Digital amateur radio repeater to test compatibility with other radio services; the United States says no to a new I-T-U treaty to govern the Internet; the Dutch military wont give up 915 MHz for unlicensed short range devices; and a new eye on the sky down-under will warn of solar eruptions. Find out the details are on Amateur Radio Newsline report number 1845 coming your way right now.

2621. [RAC-Bulletin] RAC Bulletin 2012-071E - Distracted Driving Update =96 Ontario Regulations Changed

Newsgroup: rec.radio.amateur.misc
Date: 2012-12-22 23:51:48 UTC
From: rac-bulletins@eton.ca
Message-ID: <50D64737.4080508@rac.ca>
Source record: 1038
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.info

RAC Bulletin 2012-071E - Distracted Driving Update • Ontario Regulations Changed
2012-12-22

In light of the prorogation of the Ontario Legislature on October 15, 2012, the amateur radio community in Ontario has raised questions regarding the status of the 5-year extension to the amateur radio exemption in the Display Screens and Hand-Held Devices Regulations that was announced by Minister of Transportation Bob Chiarelli on September 24, 2012. Former RAC Honourary Legal Counsel, Steve Pengelly, VE3STV, has advised that prorogation would have had no effect on the announced extension because it was contained in a regulation passed by an order-in-council.

To further address the concern, Radio Amateurs of Canada is pleased to inform Ontario hams that Ontario Regulation 253/12, which can be found at:
http://www.e-laws.gov.on.ca/html/source/regs/english/2012/elaws_src_regs_r12253_e.htm
has amended the amateur radio exemption sections of former Ontario Regulation 366/09. Specifically, the •January 1, 2013• portion of section 13(1) and the entirety of section 13(2) of Ontario Regulation 366/09 were struck out and replaced with section 3(1) and 3(2) of Ontario Regulation 253/12, stating the new January 1, 2018 deadline.
The actual amended Ontario Regulation 366/09 can be found at http://www.e-laws.gov.on.ca/html/regs/english/elaws_regs_090366_e.htm./

Radio Amateurs of Canada will continue to pursue a permanent exemption for Amateur Radio operators in Ontario. Similar exemptions already exist in many other provincial jurisdictions in Canada - thanks in part to the efforts of local amateurs and RAC's national strategy to address distracted driving legislation.

Radio Amateurs of Canada is Canada's national voice for Amateur Radio. Our efforts not only promote the Amateur Radio Service but protect it from regulatory interference that may lead to less capability to provide emergency communications. Not already a RAC member? Why not join today at www.rac.ca and find out about the many benefits our members enjoy across the country and the world beyond.

It is recommended that you carry a copy of your certificate and a copy of the exemption in your vehicle.

Jeff Stewart, va3wxm - RAC Ontario South Director/Assistant Chairman -
Ontario distracted driving committee
on behalf of Bill Unger, VE3XT - RAC Director Ontario North - East -
Chairman - Ontario distracted driving committee

Mt. Blanc expedition

Posted: 23 Dec 2012 08:19 AM PST
http://forums.qrz.com/showthread.php?373115-Mt-Blanc-expedition&goto=newpost

Hallo guys

we are still far from the 400 visit on the link below (374 as today) and the friend of mine refused to make the whole video :-) (see below)

stay tuned, we are planning a new expeditin ar the end of march on Mt. Breithorn at 4.500mt of altitute!!

I'll post all the info as soon as defined.

Marry Marry Xmas, click on Vimeo link below to see the video, in the meantime for whole movie

link: http://vimeo.com/39717845

Elio, iz2rlj

Hi,

hereby the link at our last HF expedition at almost 4.000mt over the sea.

Great experience!!! Clicking the link you can see a brief "trailer"...and the friend of mine is saying that the whole video will be delivered when the 400 contacts will be reached (now +300) :-) :-)

So I encourage to click our experience and...enjoy. Next spring we are planning to climb on the Breitorn (aroud 4.500mt)...stay tuned & in touch!!

(equipment: Yaesu FT 857, automatic tuner SGC 237, antenna: 10mt vertical with 20 thin copper radials, power: 17Ah AGM Battery)

Elio - Iz2rlj

Editor Tedd Mirgliotta, KB8NW
Provided by BARF80.ORG (Cleveland, Ohio)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AB5K & the AR TelNet Clusters Network, K1XN & GoList, NJ1Q & W1AW, NG3K & ADXO, W3UR & The Daily DX, N4AA & QRZ DX, N4JF, K6VVA, KH6BZF, WB6RSE, K8GI, K8YSE, W8GEX & 60m News, W8XD, K9MM, W9ILY, 9M2PJU, AT International, DJ4EL, DK8JB & The DX News Letter, DL1SBF, DxCoffee.com, DX-World.Net, F5NQL, F6AJA & Les Nouvelles DX, I1HYW, I1JQJ/IK1ADH & 425 DX News, I2MQP & DX Italia News, JI3DST, OZ6OM & 50 MHz DX News, Pete's DX-Newsdesk, RSGB IOTA Web Site, Sixitalia Weekly, TA1HZ, VA3RJ & ICPO, and the VHF-DX-Portal (MMMonVHF) for the following DX information.

*** SPECIAL NOTE FROM EDITOR (Tedd, KB8NW): My family (wife/OPDX's chief proof-reader Linda, son Teddy [TJ] and his wife Jessi, daughter Katie and her husband Kevin and son Lliam), and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy Holiday, Merry Christmas and Season's Greetings". Thanks to the many individuals who sent holiday wishes to my family and me.....73 and Have a Great Holiday de Tedd KB8NW

DXCC COUNTRY/ENTITY REPORT: According to the AR-Cluster Network for the week of Sunday, 16th-December, through Sunday, 23rd-December there were 217 countries active. Countries available: 3A, 3B8, 3B9, 3D2, 3DA, 3V, 3W, 4J, 4L, 4O, 4S, 4U1I, 4X, 5B, 5H, 5N, 5R, 5T, 5W, 5X, 5Z, 6W, 6Y, 7P, 7Q, 7X, 8P, 8R, 9A, 9H, 9J, 9K, 9M2, 9M6, 9Q, 9V, 9Y, A2, A3, A4, A5, A6, A7, A9, AP, BV, BY, C3, C9, CE, CE9, CM, CN, CP, CT, CT3, CU, CX, D2, DL, DU, E5/s, E7, EA, EA6, EA8, EA9, EI, EK, EL, EP, ER, ES, ET, EU, EX, EY, EZ, F, FG, FH, FK, FM, FO, FR, FY, G, GD, GI, GJ, GM, GU, GW, H4, H40, HA, HB, HB0, HC, HI, HK, HL, HP, HR, HS, HZ, I, IS, J2, J3, J6, J7, J8, JA, JD/o, JT, JX, JY, K, KG4, KH2, KH6, KL, KP2, KP4, LA, LU, LX, LY, LZ, OA, OD, OE, OH, OH0, OK, OM, ON, OX, OY, OZ, P2, P4, PA, PJ2, PJ4, PJ5, PJ7, PY, PZ, S2, S5, S7, SM, SP, ST, SU, SV, SV5, SV9, T5, T7, T8, TA, TF, TG, TI, TK, TL, TR, TT, TU, UA, UA2, UA9, UK, UN, UR, V3, V4, V5, V7, V8, VE, VK, VP2E, VP2M, VP2V, VP8, VP8/h, VP9, VR, VU, XE, XU, XX9, YA, YB, YI, YL, YN, YO, YS, YU, YV, Z2, Z3, Z8, ZA, ZB, ZC4, ZD7, ZD8, ZF, ZL, ZP, ZS

* PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later" (WFWL).

3B9, RODRIGUEZ ISLAND. Juha, OH1LEG, is now active as 3B9/OH1LEG from Baie du Nord, Rodriguez Island (AF-017, WFF 3BFF-004, WLOTA 4265) until January 7th (2013). Activity will be holiday style on 160-10 meters using SSB, RTTY and PSK31. QSL direct only to his home callsign.

9M2, WESTERN MALAYSIA. Piju, 9M2PJU, will be active as 9M2PJU/P between December 31st and January 1st (2013), near the Kepong Metropolitan Lake Park, Kuala Lumpur, along with a few amateur hams. He states [edited], "I will be celebrating the New Year here and will be calling for DX stations on 40m, 20m and 15m, CW mode just to say happy new year to them. I'm OK on QRZ.com. LoTW and eQSL user."

9U, BURUNDI (Update). An international team of operators from ON, PA and GM will be on the air from Bujumbura between February 14-23rd (2013). In total they will have 9 operators and four stations and airing the call-sign 9U4U. Operators currently mentioned are Patrick/ON4HIL, Theo/ON4ATW, Marc/ON6CC, Luc/ON4IA, Ronald/PA3EWP, Marc/ON4AMX, Stefaan/ON4FG and Franky/ON7RU. Activity will be on 160-10 meters using CW, SSB and RTTY. QSL Manager will be M0URX. A Web site is now online at:
http://www.9u4u.be
This DXpedition will also have a Twitter page. Also, this Expedition is organized by the "Belgian Rockall Team".

10th AAW IN FEBRUARY. Look for the 10th Antarctic Activity Week (AAW) to take place between February 18-24th (2013). This event is promoted by Worldwide Antarctic Program (WAP) <http://www.waponline.it> each year to improve the world-wide attention about the Antarctic Continent and its related matters, with the aim of staying close to the researchers and personnel who are spending their time away from home and families, studying the Antarctic life and its secrets in the so many remote scientific stations in this icy continent. The WAP is also thankful for what the Nations and Research Foundations are doing to protect this still uncontam-inated corner of the planet and to share a message of peace among the world. The AAW is a unique event world-wide where Hams (in any corners of the world) sign up and help promote the special attention given to the Antarctica. This worldwide event is open to all radio amateurs wishing to join them using a special callsign which help promote the Antarctica. All SES with a WAP reference number will qualify for WAP ASEA (Antarctic Special events Award). The WAP Ref. number for any special callsign requested/issued for this occurrence can be provided upon request by sending an E-mail to I1HYW (QRZ.com). The list of participants is still open and is available at: http://www.waponline.it/Default.aspx?tabid3

AAW ACTIVITIES ANNOUNCED.....
* HF0A (WAP-237) SES (Special Event Station) working AAW. Janusz, SP9YI, informs that he will work as HF0A between January 15th and February 28th (2013) and in particular during 10th AAW. QSL via SP9YI. Janusz already holds WAP-215 for HF36POL and WAP 216 for HF35APAS for past activities, and now he has WAP-237, for HF0A.

* AO1ICE (WAP-233) SES working AAW. During the 10th AAW (Antarctic Activity Week), to be held between February 18-24th (2013), a group of Spanish operators: EC1KV, EB1LA, EA1CUB, EA1CS, EA1WX, EA1AUM and EA1WK will be on the air,like every year; this time with the special callsign AO1ICE just issued. Operations will be on 160-10 meters + the WARC bands, using SSB, CW and RTTY PSK31. As in the previous years, the log will be uploaded every day on ClubLog and also on their website created for this activity at:

http://ea1wk.blogspot.com.es/2012/12/ao1ice-10-antarctic-activity-week-wap.html
Special thanks to Tony, EC7ZK, who did design this 2013 AAW QSL; Vlad, UA6JD, for listing them on QRZ.com and to Max, IK8LOV, for the online log availability. QSLs for AO1ICE can be requested via EA1WK, by the Bureau or direct via the OQRS.

* The full list of SES participating the 10th AAW is updated regularly at the WAP Web site, check: http://www.waponline.it

C6, BAHAMAS. Rick, K6VVA, informs OPDX readers: "I am now scheduled to return to the Bahamas again. This time QRV as C6AVA on North Bimini Island IOTA NA-048 from 11 to 14 January (2013). As always, this will be a primarily CW activation. I may also be QRV in the NAQP CW Contest. IOTA NA-048 is still needed by 86.1% of ASIA/JA IOTA Claimants, 70.2% in EU and more than 54.3% in NA. Special efforts will be made for ASIA/JA as I did from NA-054 due to the polar path route. Hopefully propagation will cooperate.
An important note to Italian IOTA Chasers: If I send your callsign correctly the first time, please do NOT repeat your callsign 2 or 3 times as this unnecessarily wastes time. Stations who repeatedly call out-of-turn (Pileup "Bullies") will be confronted and run the risk of NOT getting into my log. If you cannot copy me, then please do NOT call.
More Info at: http://www.k6vva.com/iota/na048 *** QSL ONLY Via N6AWD."

CENTRAL AMERICA TOUR. Markus, DJ4EL, will be active as XE1/DJ4EL from Tlaxcala (the smallest state of Mexico, rare) at an altitude: 2500m (8200 ft ASL) between now and January 2nd (2013). Activity will be on 20/17/15/12/10 meters SSB using a Kenwood TS-50 with 100 watts into a quads and vertical antennas. He will also be active as V31ME from two islands in Belize: Ambergris Caye (“la isla bonita” - NA-073) and Long Caye (Lighthouse Atoll, rare - NA-123) between January 3-17th (2013). Activity will be on 40/20/17/15/12/10 meters SSB using the same equipment. QSL both operations via DJ4EL.

H40, TEMOTU PROVINCE. Just a reminder that Sigi, DK9FN, will once again return to Temotu Province for a fourth time and be active as H40FN between now and January 7th (2013). QSL H40FN via HA8DD.

IOTA NEWS.....
AS-079. Take, JI3DST, will be active from Miyako Island between 0900z, December 27th and 0000z, January 7th. He states that he will use three different callsigns on the island: JS6RRR (Main), JI3DST/JS6 (Sub) and JA3YEC/JS6 (For JA). Activity will be on

160/80/75/40/30/20/17/15/12/10/6 meters using CW, SSB, FM,
RTTY and PSK31. Operations may vary in case of heavy rains
or other conditions. QSL routes are as follows: JS6RRR via
JS6RRR, JI3DST/JS6 via JI3DST and JA3YEC/JS6 is only 1 way
and does not need your QSL. Via bureau is best. Please check
QRZ.com for more details.

KH6BZF PROPAGATION FORECAST/REPORT (December 24-30th)....
Dec/24th HN-LN Dec/27th HN-LN Dec/29th HN-AN

NEW OFFICERS FOR 2013. The Northern Illinois DX Association (NIDXA)
has elected the following officers and directors for 2013:
President: Randy Brothers, K9OR
Vice-President: Wally Klinger, W9BEA
Secretary: Bill Shillington, W9ZCL
Treasurer: Don Whiteman, KK9H
Director: Jack Hudson, W9MU
Director: Howie Huntington, K9KM
Director: Gary Hornbuckle, K9MMS
Director: Jim O'Connell, W9WU

PY0F, FERNANDO DE NORONHA ISLAND. Leo, PP1CZ, will be active as PY0F/PP1CZ
from Fernando de Noronha Island between January 15-21st. This will be a
family holiday, so activity will be limited to his free time. Operations
will be focused on 160 and 80 meters CW, and RTTY/CW, as well as some SSB
on the other bands. QSL via his home callsign.

7O6T QSL STATUS. It was announced by Dmitry, RA9USU, "On December 18, 2012 we (temporarily) stopped shipping cards out because of the known Russian pre-holiday period extravaganza at Russian Post office. We will resume shipping after New Year's holiday in Russia (Dec 30–Jan 8)."

VU3BPZ QSL STATUS. Bhagwati Prasad has been active for a long time in different years from the Indian Base of Maitri (WAP IND-03) as VU3BPZ and AT10BP, as well as the new Bharati Base (WAP IND-04) as VU3BPZ/P, and as AT10BP/R1, VU3BPZ/R1 from the Russian Base of Novolazevskaya (WAP RUS-09) and then as VU3BPZ/MM from aboard the Polar Ships Paardeberg and Ivan Papanin. Cards for these operations must be requested only direct via I1HYW (see QRZ.com). Unfortunately, no chance to get these QSL cards via the Bureau, so please refrain from sendng them that way. So far, all the cards received have been answered, and now QSLs coming in will be answered the same day they are received.

ZL9HR LOG. On December 21st, it was announced that the ZL9HR log has been uploaded to LoTW!

QSL RECEIVED VIA LoTW: 5B4AIF, 5C2P, A61BK, BX5AA, EI7M, HC6EP, KH7M, KH7T, KH7X, LP1H, LX0HQ, LZ7HM, P4/R5GA, P40F, PJ4A, T30PY, VE3EJ, VE3YAA, VE6JY, VE7CV, VP2MDG, VP2V/AA7V, YN2CC, VP2MDG and ZC4LI

QSLS RECEIVED VIA MAIL: 1A0C, 3B9SP, 3D2C, 4L1MA, 5N/LZ1QK, 7O6T, A31MA, AH0I, CU1ARM, CU2ARA, CU3URA, CU4ARG, CU5AM, CU6GRP, CU9AC, D2QV, D64K, E51AIU, E51TLA, EL2DT, EL2ES, EL2MF, EL2WE, EW7LO, HC2/KF6ZWD, HC2AC, HT9H, LX1NO, NH8S, OA7/DF7NX, OH10X/MM, T30PY, T6MO, TT8TT, V31NO, V31MW, V63PR, VK9/OH1VR, VP2ETE, WH0/K0BBC, Z60K and ZL7A

QSLS RECEIVED VIA THE BUREAU: NONE REPORTED THIS WEEK!

SILENT KEY. It was reported that Al Keck, W9YYG, became a Silent Key (SK) last Thursday, December 13th. Al was on the top of the DXCC mixed honor roll and had been a ham for over 60 years. He had been a member of NIDXA since 1971. He was 74. OPDX and its readers would like to send out our deepest sympathy to the family and friends of W9YYG.

SPECIAL UK PREFIXES (Correction). It was announced in the RSGB magazine that all UK amateurs will be able to apply to use the special V prefix, such as GV, MV and 2V starting July 5th, 2013 (not 2012), until the end

of the month of July. These special prefixes will be used to celebrate the 100th anniversary of the Radio Society of Great Britain (RSGB). Further details on this will be announced nearer to the time of the event.

TC9, TURKEY (Special Event). Once again, members of the Turkish Scouting and Guiding Federation's National Conciousness Camp have activated special event station TC9SAM and will be active until December 24th. Activity is in memory of the "Allahuekber Martyrs", and operations will be commemorating the fallen in the Sarikamis Campaign of World War I. The special event station TC9SAM is located in Gaziler and Kaynak villages in the Erzurum Province. In accordance with the camp program, they will be on the air mainly on 40 and 80 meters SSB, but also look out for some PSK31 activity. You can also try to follow the team on APRS. TC9SAM will be operating as an IGate from Gaziler and TC9SAM-7 is the lead scout in the hike, while TC9SAM-8 and TC9SAM-9 will be in support jeeps. QSL only direct to TCSWAT please. They will also QSL via eQSL after their return from the trip. Please DO NOT send any QSL cards via the TA QSL Bureau. QSLs will be sent automatically by TCSWAT 100% via the Bureaus. Detailed info is available on <QRZ.com> and <www.tcswat.org>. The QSL Manager is TA1HZ.

TX5, CLIPPERTON ISLAND (Update). A pres release was posted on the TX5K Clipperton Island DXpedition Web page on December 15th. An excerpt from the post states: "During the weekend of Dec. 10, the European members of the team gathered in Goch, Germany, at the super contest station DR1A, to assemble and pack most of the equipment for the two HF operating sites on Clipperton. The gear includes ten full HF stations; the 6m station will be shipped from the U.S. The effort was led by co-organizer Chris, DL1MGB. The gear includes 6 7kW generators and 50 large Pelican cases of equipment. We welcome Markus van Bergerem, DJ7EO, to the team. He has made arrangements for the generators (six 230 VAC 7 kW). The total team is now 25 persons. We are pleased to announce that we will receive a Colvin Award Grant of 5000 USDs, and also support from the German DX Foundation of 1400 EUR." To read the complete press release, go to: http://www.cordell.org/CI/CI_pages/CI_News.html

VP2M, MONTSERRT. Nao, JN1RVS, is now active as VP2MRV from Montserrat (NA-103, WLOTA 1475) until January 3rd (2013). Activity will be on 80-10 meters using CW and RTTY. QSL via JA1HGY, direct or by the Bureau, and LoTW. There is a log search on ClubLog.

YJ, VANUATU. By the time you read this, Michael, VK2BXE, is expected to be active as YJ0MB from Port Vila until sometime in the New Year. Activity will be on all HF bands. QSL via his home callsign.

Irish Radio Transmitters Society
Radio News Bulletin
Sunday 23rd December 2012

Christmas & Seasons Greetings

The President officers and committee of the IRTS send Christmas wishes and greetings to all its members and friends at home and abroad.

Echo Ireland

Due to unforeseen circumstances, the next issue of Echo Ireland will not be published until early January. Deadline for inclusion is January 3rd. Your input would be greatly appreciated.

IRTS 80m Counties Contest 2013.

The date for the 2013 IRTS Winter 80m Counties Contest is Tuesday 1st January.

Check the rules at: www.irts.ie/cgi/showrules.cgi?80m Please notice Rule 4.4 and 4.5 and keep the portion of the band between 3.650 and 3.700 clear for non-contesters.

Also notice the change in Rule 10.1 which states Entries must be received by the Contest Manager not more than 14 days after the contest.

Unusual Special Event Station

The call sign November-Zero-Delta ("Now Zero Days"), described as a Doomsday Special Event Station celebrating the end of the World, originally scheduled for last Friday 21st December, was activated during the week.

Listeners to this bulletin on Sunday will know that the "end of the World" has been deferred, at least for the time being. N0D, operating from Texas, has been heard on a number of bands, and was easily workable from EI. In the absence of any major DXpeditions at this time of the year, the Doomsday station provided a good-humoured focus of attention.

EI13CLAN

As you may be aware, 2013 sees a major event entitled 'The Gathering' being promoted both at home and abroad to engage with the Irish Diaspora around the globe. This is a 32 county, cross border, initiative and given the unique ability of Amateur Radio to communicate so effectively, the Society will support the initiative by way of a variety of events and programmes during the year. We will announce particulars early in the new year by way of bulletins on the radio news service, a dedicated page on the IRTS website and of course in Echo Ireland. ComReg has issued to the Society a special event callsign 'EI 13 CLAN' which will be active through out the year, much as our 'EI 80 IRTS' call was used in 2012. We expect that the callsign will generate quite a lot of interest from overseas operators, particularly in the U.S., who have Irish roots, so if there are any members who have a particular interest in genealogy and who would be willing to assist with any such queries please contact Seamus EI8BP, or any member of the committee.

South Eastern Amateur Radio Group

2012 was a very busy year for the South Eastern Amateur Radio Group and we look forward to 2013 being an even busier year. During 2012 we took part in many of the contests including the IRTS 80m summer counties contest where we took first place in the SSB only portable section. Congratulations to all involved. We ran some portable event stations from some vintage days including Inistioge and Cavan. We would like to thank the organisers of these events for inviting us and we look forward to returning in 2013. We also held a theory course for the amateur license and it was a great success and many thanks go to Mark EI7IS and David EI6GVB for the time and effort they put into the course. Many thanks to everyone that supported our various events and activities throughout the past year.

There will be no December meeting of the club and the next meeting will take on the 28th of January 2013 in the Roanmore Social and Sports Centre, Cleaboy Road, Waterford at 8.30 p.m. The meeting will be preceded by a committee meeting at 8.00 pm. New members are always welcome. For up-to-date news about the club you can check our website www.searg.com and you can follow us on Facebook and Twitter.

The South Eastern Amateur Radio Group would like to take this opportunity to wish all our members and all our radio friends and their families in Ireland and around the world a very happy and peaceful Christmas and a healthy and prosperous 2013.

Expansion of UK 5Mhz Frequency

The latest edition of The 5 MHz Newsletter is now available. It is a combined Autumn/Winter edition. One article gives details of expansion of 5Mhz frequency. In brief, the present number of seven 3 kHz-wide

channels have been integrated into and replaced by 11 frequency blocks of varying size. The newsletter can be viewed on http://bit.ly/YqeKJx

---

The Lagan Valley ARS Annual Rally

The Lagan Valley ARS annual rally and hamfest will be held on Saturday, 2 March 2013 commencing at 11:30 a.m. The venue will be the Village Centre, 7 Ballynahinch Road,Hillsborough BT26 6AR. Usual traders expected to attend and refreshments available. Admission £3.

Contact Jim, GI0DVU for further information., Tel 04892662270

DX News

Kei KG2A will be QRV from Antigua from 23 - 29 December. He will use the callsign V25A and QSLs go via KG2A direct.

Max HB9TUZ is travelling to the Maldive Islands for a short holiday over the New Year. Look for him on all bands 10 - 80m SSB as 8Q7MS between 26 December and 3 January.

Another short term visitor to Lesotho is Kiyo JR1IZM who has been issued with the callsign 7P8ZM. He will be active until mid-January and QSLs go via his home call.

Prefix hunters will be interested in the callsign 8N119T. This is being used to celebrate the 65th anniversary of the Tokyo Fire Department and will be on the air until 25 March.

Tom DL5NEN and Claudia DO5NEN are reactivating their S79NEN callsign in the Seychelles until 28 December. QSL to DO5NEN.

Items for inclusion in next week's Radio News can be submitted via e-mail to "newsteam /at/ irts / dot / ie" for automatic forwarding to both the radio and printed news services. Urgent news items for the radio news maybe telephoned to the radio news editor, Aidan, EI7JC on 085 7100511.

Please note that items for the radio news should reach the editor no later than midday on Thursday in order to be guaranteed inclusion in the following Sunday's bulletin.

WIA President Christmas Message:

Posted: 23 Dec 2012 03:49 AM PST
http://www.eham.net/articles/29549

In this Christmas message it's customary for the WIA President to thank all the staff at the WIA office and the very many volunteers who have done so much work during the year to keep the wheels turning. This has been a particularly difficult year for the WIA with the untimely passing of our late president Michael Owen VK3KI, but with a lot of hard work and dedication from everyone involved we have come through this transitional period in great shape. I would like to recap some of the achievements of this past year, and in the first broadcast next year I will tell you about some new initiatives that we hope to achieve during 2013. The ITU, the IARU, and the ACMA are where the rubber really hits the road in the WIA's advocacy role for Amateur Radio. They are difficult, time consuming, and expensive, and often go unnoticed by members, but they are the most important work the WIA does for amateur radio, and all radio amateurs, worldwide, benefit.

Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
17 - 23 December 2012

Solar activity was low. Only C1/Sf level flares were observed.
Region 1633 (S07, L=111, class/area=Eki/340 on 17 December) was the
most productive, with eight C1 flares to its credit. Six of these
occurred in the last two days of the week. While it was the largest
region on the disk at the beginning of the week, it ended tied with
Region 1635 (N09, L=64, class/area=Ehi/250 on 21 December) with an
area of 200 microhemispheres. Both Regins 1633 and 1635 ended the
period with beta-gamma magnetic configurations. No earth-directed
CMEs were observed.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
background levels all week.

Geomagnetic field activity was at predominantly quiet levels all
week. There were two exceptions. A positive polarity, southern
hemisphere recurrent coronal hole high speed stream brought
unsettled conditions and the only active period of the week on 17
December. At high latitudes, a single major storm period was
observed. Later in the week, another positive polarity coronal hole
high speed stream, this time in the northern hemisphere, brought a
single unsettled period on 20 December. Activity reached minor storm
levels at high latitudes. During both high speed streams, solar wind
speed reached the low 500 km/s range while the southward component
of the interplanetary magnetic field dipped to approximately -6 nT.

Forecast of Solar and Geomagnetic Activity
24 December - 19 January 2013

Solar activity is expected to be at predominantly low levels during
the forecast period, with a slight chance for an M-class event.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at background levels throughout the period.

Geomagnetic field activity is expected to be at predominantly quiet levels with the exception of 29-30 December and 13 January when recurrent coronal hole high speed streams are expected to bring unsettled conditions.

2634. [RAC-Bulletin] RAC Bulletin 2012-072E - Regulations Amending the ContraventionsRegulations

RAC Bulletin 2012-072E - Regulations Amending the Contraventions
Regulations
2012-12-22

There has been an announcement in the Canada Gazette as to changes in
the Contraventions regulations concerning the enforcement of the
Radiocommunication Regulations.

These changes will allow peace officers including Municipal,
Provincial and RCMP police officers to issue tickets for certain
offences under the Radiocommunication Regulations.

The changes may be seen at:

<http://www.gazette.gc.ca/rp-pr/p2/2012/2012-11-21/html/sor-dors236-eng.h
tml>

Radio Amateurs of Canada is the national voice for Amateur Radio in
Canada. Our efforts not only promote the Amateur Radio Service but
protect it from regulatory interference that may lead to less
capability to provide emergency communications. Not already a RAC
member? Why not join today at www.rac.ca and find out about the many
benefits our members enjoy across the country and the world beyond.

From Fringes, Hams Now Tune into Mainstream:

Posted: 24 Dec 2012 02:24 AM PST
http://www.eham.net/articles/29550

A decade is a long time for anything to either wither and die or take root and flourish. Returning to Chennai after 10 years, Hamfest India - a celebratory congregation of hams across the country - finds the hobby thriving. In recent years, software-defined radios and social media have made it more accessible and attractive to a large number of people in the city, especially youngsters. "There is now a website - chennaihams.blogspot.in - and a Facebook page. The main driver of growth is cutting-edge technology, which has shrunk the sizes and prices of handsets. Manufactured in China, these instruments come cheap, at Rs. 5,000 or Rs. 6,000 a piece. In the past, it took Rs. 15,000 to Rs. 20,000 to invest in one," says G. Vipin Shankar, a city ham and webmaster of the site.

Philippines activates emergency net 7.095 MHz

Posted: 25 Dec 2012 07:17 AM PST
http://forums.qrz.com/showthread.php?373301-Philippines-activates-emergency-net-7-095-MHz&goto=newpost

Philippines activates emergency net 7.095 MHz

The Philippine Amateur Radio Association (PARA)
Inc. has activated its emergency net to deal with whatever contingencies
that may arise due to typhoon Quinta making landfall by Dec 26.

As of the moment the typhoon is situated some 60 kilometers
east of Guiuian Eastern Samar. It packs a 65 to 90 kph gustiness near the
center.

Please advise all operators to stand clear from the calling
frequency of 7.095 MHz plus minus QRM. We will be using the frequency
until we stand down from our emergency net and return to normal operations.

First off the information thread, Nathan Eamiguel, DU5AOK, has
relayed that the City of Tacloban has ordered a forced pre-emptive
evacuation of Barangay Palanog and other low-lying areas in Tacloban City
as of 5:20 PM local time.

Thank you and Merry Christmas.

Ramon J. Anquilan, DU1UG

Vice COO, PARA

Philippine Amateur Radio Association (PARA)

LoOG4OM Christmas release

Posted: 24 Dec 2012 06:07 AM PST
http://forums.qrz.com/showthread.php?373200-LoOG4OM-Christmas-release&goto=newpost

LOG4OM Christmas release!

Apologies for a small delay!

I announced a forthcoming new feature in a previous post, unfortunately time and other priorities have meant that this new feature will now not be included until January 2013, just in time for LOG4OM☐s first birthday!

LOG4OM is a free general-purpose logbook that has been specifically designed for the DXer and contester, this new feature is aimed squarely at the type of operator that enjoys a rag chew and those that are involved in emergency and general nets, more about this later!

Data Accuracy.

We pride ourselves in having provided a better lookup facility than any other logging program, with inclusion of a Country file and Special call list that are updated daily by K7PT plus the included Clublog Exception list, LOTW Users and IOTA databases. These combined with QRZ and HamQTH online lookups ensure that our data is extremely accurate.

As with any system there are anomalies that cause issues and the most frequent one encountered by all logging programs is resolving the position of the DX identification prefix in relation to the ☐/☐.

Some stations positioning the DX Prefix in the correct position before the ☐/☐ while others insist on using the DX Prefix as a suffix by placing it after the ☐/☐

Then there is the added complication of deciding which part of the call is the operators☐ call sign and which is the DX Prefix, especially with operator calls that have 4 characters being used with DX identifiers that use a 4 character prefix. Resolving VP2M/K7PT and K7PT/VP2M correctly is a nightmare that all logging programs struggle with.

Daniele has applied some very special logic to this issue and I am please to say that this latest release has nailed the ☐/☐ issue once and for all and I believe we now have a more accurate system of call data processing than any other logbook available, free or commercial.

This release.

Other enhancements in this release include a facility to bulk update distance and heading to overcome issues with missing data in imported ADIF☐s and further streamlining of our already excellent DX cluster feature.

The latest user guide and download are here
http://www.pisto.it/wordpress/log4om-en/

Release notes

· Improved call lookup for odd ☐/☐ calls where the entity identifier could be confused with the operators call sign ☐ LOG4OM now resolves these unusual calls where other programs cannot.

· Added a routine to update distance and heading in the bulk update facility where imported ADIF☐s from other programs have missing data.

· Cluster connection checking added by interrogation of the cluster every 90 seconds if no spot is received.

· Cluster threading changed to improve performance.

· Several speed enhancement tweaks.

· Window position remembered on shutdown

· Removed the call sign reference from address label to avoid content identification

· Included a ☐None☐ value to the ☐QSL sent via field☐ in the edit screen ☐ Now updates when editing

· Added an ☐Empty☐ field in ☐QSL sent Via☐ drop down

The LOG4OM team wishes all radio amateurs Worldwide a happy Christmas and a healthy and happy new year ☐ Good DX.

HamRadioNow: FCC Year in Review

Posted: 23 Dec 2012 06:14 AM PST
http://forums.qrz.com/showthread.php?373106-HamRadioNow-FCC-Year-in-Review&goto=newpost

HAMRADIONOW.tv

Episodes 43: FCC Year in Review for Amateur Radio

Gary takes a not-so-nostalgic look back at the FCC actions that affected ham radio this past year. On the plus side,

we get some ham bands you'll probably never use; we get primary status on 160 meters that won't really change anything;

we got off that one bad channel on 60 meters and we get to use CW and data there... inefficiently. And MotoTRBO

is about to become legal. On the down side of the ledger, the FCC "studied" us and concluded that we're really good guys

who don't have a problem with CC&R's, and the comments (not) left by hams in that proceeding don't give us much

ammunition to dispute the statement. Gary's got a cold, so maybe that's why he's coming off more like

Scrooge the weekend before Christmas.

Tropical storm Quinta hits the Philippines

Posted: 26 Dec 2012 02:45 AM PST
http://forums.qrz.com/showthread.php?373365-Tropical-storm-Quinta-hits-the-Philippines&goto=newpost

Tropical storm Quinta hits the Philippines

Activated again for Tropical Storm Quinta are members of the
Philippines Amateur Radio Association emergency net on 7.095 MHz and VHF,
to handle any emergency and welfare traffic.

PARA Vice Chief Operating Officer, Ramon J. Anquilan DU1UGZ,
requested that the HF channel be kept clear to deal with whatever
contingencies may arise.

The Ham Emergency Radio Operators know what to do, with about
20 typhoons in the archipelago every year, often causing death and
destruction.

Communities were on put on alert Christmas Day as a low
pressure area developed into a storm and made landfall on Wednesday,
December 26 to travel through the Visayas. Officials warned that the areas
within a 350 kilometre diameter of Tropical Storm Quinta should expect
heavy to intense rainfall.

The public warnings included more heavy rains, possible flash
floods and landslides over the next few days.

Pre-emptive evacuations were ordered for several islands and
low lying areas, which included some areas already badly affected earlier
by Typhoon Pablo that destroyed houses and agricultutal land in early
December.

Hundreds of ferry passengers are left stranded during the
latest storm. Warnings have been also issued to fishing and small seacraft
to stay tied up over the eastern seaboard off Luzon and over the Visayas
and Mindanao.

Those affected earlier this month by Typhoon Bopha are in
temporary shelters and relying on donated food.

Bopha was the most intense storm to hit the Philippines
recently, affecting communities near the coast in the southern provinces

with 1,067 dead and more than 800 missing.

Jim Linton VK3PC

Chairman IARU Region 3 Disaster Communications Committee,

Amateur Radio balloons recovered in Morocco and Mississippi

Amateur radio high altitude balloons K6RPT-12 and
N0D have been recovered in Morocco and Mississippi.

K6RPT-12 was launched from California on December 3 at 0126
UT, successfully crossed North America and the Atlantic, and landed in
Morocco on December 5 at 0923 UT.

On Christmas Day Ron K6RPT announced that his California
Near Space Project payload had been recovered by a team of French and
Moroccan amateur radio operators in Morocco on December 23.

More details and pictures at

http://www.californianearspaceprojec...s_cnsp-18.html

N0D (BLT-32) was launched late on December 15 but the
balloon burst over Mississippi the following day. It was found on December
20 by a hunter in Mississippi who rang the team to ask what the heck was
in the box he found with all the wires hanging out!

http://forums.qrz.com/showthread.php?373314-quot-BACK-TO-THE-FUTURE-quot-W9BSP-Event-1-05-13&goto=newpost

Announcing

"Back to the FUTURE" -W9BSP KW-AM Transmitter

3.885 mHz AM - 7 PM Central - January 5, 2013

Larry Woodworth WØHXS

Ensor Park and Museum Mgr.

http://www.W9BSP-W9UA.org/ [URL]

12/25/2012

When we stumble, we get up and go again!

Here's what has happened so far;

The 75 year old kilowatt rig was built in 1937 by Marshall H. Ensor for continued 1930's 160 Meter lessons in Morse code and operating theory to thousands of radio fans tuning in his AM and Modulated CW lessons.

The Marshall Ensor Memorial Organization Restore Team worked often over more than 2 years at the Olathe, KS. Ensor Park and Museum during off season hours and succeeded in installing newly built high voltage power supply and new modulation amplifier below the operating desk of the 75 meter W9BSP-W9UA KW transmitter.

Many aged and unsafe wires were replaced along with other components as needed. Much testing took place along the way. Head technician, Harry Krout WØYQG assisted by son Joe, WØPWJ managed the arduous task aided by original hand drawn layouts and schematics by Ensor. Larry Woodworth WØHXS helped devise methods to insert or remove the heavy supplies safely below the desk as well as some transmitter safety features.

Numerous power tests took place into oil can dummy load as well as into the antenna system using a more power rated tuner and feed line elements. Everything seemed to be OK. Information of a December 8 th Special Event

was published.

Many hams were on frequency awaiting a chance for contacting the famous W9BSP station, and our crew came in from a light rain to ready for the event. During a last minute check of full power into the antenna the rig did not like any part of the attempt and had an SWR off the scale. They checked for why the problem existed, and only the antenna could be blamed. The failure was a disappointment for all.

Over the next days all questionable details of antenna design pointed to faulty insulator installation that never showed up during low power use of the club transceiver, but the high power and the wet dipole ended our quest.

Some on air tests prove that we are now ready for the post holidays renewed Special Event.

Our special 6-panel QSL w/ historic photos is available for a SASE to Joe Krout WØPWJ Trustee or we will reply to e-QSL. Thank you, and 73.

WIA: The New 630 Meter Band is Now a Reality:

Posted: 26 Dec 2012 12:32 AM PST
http://www.eham.net/articles/29552

ACMA Makes Amendments to the Amateur Licence Conditions Determination (LCD) - The new 630 meter band is now a reality. Effective from the 1st January 2013, Australian Advanced amateur licensees can now operate in the new band (630 meters) on a secondary basis. This new world wide allocation from 472 kHz to 479 kHz is an outcome of the ITU World Radio Conference in 2012 (WRC-12). The ACMA has amended the conditions in the LCD that gives effect to the WRC outcomes authorising a radiated power of not more than 5 watts pX EIRP, with a maximum emission bandwidth of 2.1 kHz. There is however two exclusion zones where amateur operation is not permitted so as to protect aeronautical non-directional beacons (NDB) operating in the Exmouth and Timor regions.

//
Ham Radio Enthusiasts Seek Wider Following:

Posted: 25 Dec 2012 01:38 PM PST
http://www.eham.net/articles/29551

Ham radio was what kept him in touch with his loved ones while he lay in bed recovering from the chemotherapy. "You can sit in your bunny slippers and talk to your buddies," said Tim Billingsley, an employee of DeSoto County Emergency Services. Ham radio is not merely a hobby, however, as any natural or civil disaster can reveal. It is a way for leaders and citizens of a city, region or nation to communicate in a time of crisis. The communication method, also known as amateur radio, is effective when land lines or cellular service, perhaps because of an overload of use, won't work. Thanks to local enthusiasts like Billingsley, the Olive Branch area is better prepared in case of disaster. The Olive Branch Amateur Radio Club this summer completed installation of a radio repeater and antenna. The structure, atop the water tower at Craft Road and U.S. 78, increases the signal, providing at least 30-mile radius coverage. While radio range depends on several factors including antenna height, repeaters are vital to boosting range. Without repeaters, many common radio signals would have a range of only about five to 10 miles. "Everything is operational," said Billingsley who has been working with ham radios about 15 years. "We've been waiting (for this). When we put it on the water tower we greatly increased its usable range."

RAC Bulletin 2012-073E - Reminder Regarding the Winter Day Contest
2012-12-26

In our recent RAC Report I erroneously stated that the RAC Winter Day Contest was on the 28th of December, 2012.

From the Contest Rules "2012 RAC Canada Winter Contest/Concours D'Hiver du Canada RAC 2012": Contest Period: 0000 UTC to 2359 UTC December 29, 2012. Next year the contest will be held on December 28, 2013.

We will look for you on the air 0000 UTC to 2359 UTC December 29, 2012!

For information and contest rules on both RAC Winter and Summer Contests set your browser to:
http://www.rac.ca/en/rac/programmes/contests/

Take care. I hope that everyone has a great contest, a great New Years Day and a healthy and prosperous 2013.

Geoff Bawden, VE2BAW
President and Chair RAC

14th Annual "Ham Radio University" on Long Island - January 6, 2013

Posted: 25 Dec 2012 05:13 PM PST
http://forums.qrz.com/showthread.php?373347-14th-Annual-quot-Ham-Radio-University-quot-on-Long-Island-January-6-2013&goto=newpost

The 14th annual Ham Radio University (HRU) will be held on Sunday, January 6, 2013 from 7:30 a.m. to 3:30 p.m. at Briarcliffe College, 1055 Stewart Avenue, Bethpage, NY 11714

A day of activities at which hundreds of Amateur Radio enthusiasts will share ideas, experiences, knowledge and fellowship, Ham Radio University also will be the New York City/Long Island Section Convention of ARRL: The National Association for Amateur Radio☐.

The event will include more than 25 informational forums moderated by local experts in a broad range of Amateur Radio activities including: Tips, Tricks and Techniques of the Best Operators', 'Echolink', 'Advanced Scanner Forum', 'Azores Nine Island Hunt ☐ The Other Side of the Pileup', 'Advanced D-STAR raspberry pi', 'LINUX' and a workshop on how to use and place connectors and another on Digital Interfacing.

The keynote speaker will be Bill Cross W3TN, Staff member in the Federal Communications Commission☐s Mobility Division -- part of the Wireless Telecommunications Bureau.

A live ham radio station will be operating throughout the event and visitors will be able to experience ham radio communications firsthand by getting ☐on the air☐. There also will be a session in the afternoon for those who would like to take a Federal Communications Commission license examination to become a ☐ham☐ radio operator.

Ham Radio University is a cooperative effort supported by radio clubs and related organizations in the New York City - Long Island area. This year the event is being sponsored by the Long Island Mobile Amateur Radio Club (LIMARC). The American Radio Relay League (ARRL), the Radio Central Amateur Radio Club, The Kings County Repeater Association, the Great South Bay Amateur Radio Club, CERT, the Salvation Army, National Weather Service, Friends of Long Island Wireless, Nassau Amateur Radio Club and others will have tables in the Club Room with information available about ham radio classes, public service events and other activities.

Further information and the forum schedule is on line at:
http://www.HamRadioUniversity.org There will be free parking and the
cafeteria will be open for breakfast and lunch. The suggested donation for
attendees is $3.00.

2012 DXpedition of the Year

Posted: 24 Dec 2012 03:56 PM PST
http://forums.qrz.com/showthread.php?373262-2012-DXpedition-of-the-Year&goto=newpost

The long awaited DX World.net 2012 DXpedition of the Year is now available!This was an incredibly difficult poll to decide on considering so many notable expeditions took place during the last 12 months. It□s conceivable that up to 40 different DXpeditons could have been nominated, however, a short-list of 26 make the poll.In previous years the poll was limited to three or five votes. This year we have decided to allow free voting on as many DXpeditions you wish to select. In addition, to prevent repeat votes*, an account must be created using your callsign and QRZ.com listed email address. Once created you will receive an email then you are ready to vote.The poll closes on January 15, 2013 where full results and eventual winner will be revealed. Share with friends and pass the word that the 2012 DXpedition of the Year poll is now open!*Note: Fake, dupe or dummy votes are checked.73!Col, MM0NDX & Max, IK8LOV

HRD Log for Contest

Posted: 26 Dec 2012 05:44 PM PST
http://forums.qrz.com/showthread.php?373443-HRD-Log-for-Contest&goto=newpost

I am wondering if I can get some insight as to how to use the HRD Logging program for the upcoming RAC Winter Contest. My first foray into contesting was in the Fla QSO Party followed by the RAC Canada Day Contest in 2012. For those contests I kept a paper log and manually entered into Cabrillo format for submission (a task I do not wish to replicate). I have HRD up and running and controlling my rig and it would be easy to use the logging software for the contest since it records time, mode, band and freq automatically and I only need to input the power output once if I don't change it throughout the contest. I have hit the Contest button at the top, and RAC Contest is there, but it doesn't allow me to enter the province in the log. Also I can't figure out for the life of me how to copy only a certain portion of the log to cabrillo format for submission. I can copy one or all but it doesn't seem to want me to copy just the days QSO's. I don't want to submit my whole log as many are not from the contest and I would rather not have to copy each individually since that would be almost as arduous as entering the data by hand.

Any help would be appreciated

73,Paul

RSGB: Notice of Licence Variations for the 472Khz and 5 MHz Bands:

Posted: 27 Dec 2012 01:52 AM PST
http://www.eham.net/articles/29556

Please note that the 5MHz and 472-479kHz NoVs can be applied for at any time but do not come into effect until 1 January 2013. Please note that holders of existing 5 MHz NoVs must apply for a new NoV, and comply with the revised terms and conditions, if they wish to access the additional frequencies. Their existing NoV will not be automatically upgraded, they must apply for the new NoV online and this new NoV is effective from the 1st January 2013. Existing holders of a 5 MHz NoV are not obliged to apply for the new NoV. They can continue to use this variation to their licence until the expiry date, but they must comply with Terms and Conditions of that NoV, i.e. only have access to 7 spot frequencies and the message content can only be with regard to arranging propagation experiments.

http://slsrc.org/winterfest.html

Winterfest ☐ Jan. 26, 2013 We have 50% more space available this year! Each January The St. Louis and Suburban Radio Club, Inc., warms up the ham radio winter with Winterfest - the largest Hamfest in the area!

The up-coming Winterfest will be on Saturday, January 26, 2014 with doors opening at 8:00 AM until 1:00 PM for the general public.

Advanced ticket price is $6.00 with the price at the door being $7.00. Individual raffel tickest can be purchased in advance or at the event for $1.00 each or 6 tickets for $5.00.

Vendors can load-in and set-up on Friday, January 25, 2013 from 1:00 PM to 10:00 PM or Saturday morning starting at 5:00 AM.

Vendor tables will be $23.00 per table and if vendors need electricity there is an additional $45.00 charge. Each table reservation comes with one (1) vendor ticket - this is an admissions ticket NOT a raffle ticket. Vendors who have assistants with them can purchase additional vendor admittance tickets at a cost of $6.00 each.

To secure your same table spot as last year you must make your reservation by January 1, 2011.

Talk-in is 146.760 (no PL that day) and 146.940 (141.3 PL).

VE Testing: Starts at 9:30 AM SHARP - First Come First
Served - LIMITED to 30 individuals. If you are already licensed you need
to have your current Amateur Radio License and a copy to leave with the VE
Team. All those tested must have two forms of identification (one must be
a picture ID) and CASH to pay for the standard $15.00 testing fee (exact
change please).

Winterfest is located in the Gateway Convention Center in
Collinsville (#1 Gateway Drive), Illinois just 11 miles east of the St.
Louis Gateway Arch at I-70 and Illinois Exit #11.

TARCFEST Saturday January 12th, 2013, Tampa, FL

Posted: 27 Dec 2012 12:47 PM PST
http://forums.qrz.com/showthread.php?373524-TARCFEST-Saturday-January-12th-2013-Tampa-FL&goto=newpost

TARCFest Snowbird Edition: Saturday, January 12, 2013

http://www.hamclub.org/

TARCFest Snowbird Edition, □Florida□s
Friendliest Tailgate□ is coming soon! The date for the next Tampa
Amateur Radio Club Tailgate is Saturday, January 12, 2013. Set up
for tailgaters begins at 7:00am and trading opens up at 8:00am for
the buyers. The tailgate runs usually until about 1:00pm or until
the last lie is told or last boatanchor sold. Talk In will be on the
147.105 repeater (PL 146.2). All are welcome.

This will be the snowbird edition of our
tailgate and each one has been fun and exciting. Each TARCFest
continues to get bigger with record numbers of sellers and
buyers. This January the traders will once again gather under the
shade trees at the clubhouse to wheel and deal.

Admission will be $3 per person with children 12
and under free. Those who wish to set up for tailgating will be
charged an additional $3. Plenty of spaces will be available in
the tailgate area for sellers. And of course, free parking for
the buyers. There are a limited number of spaces inside with
indoor tables at $15.00 in advance. For table reservations or for
further information, please contact:

Bill Bode, N4WEB

14302 Capitol Drive

Tampa, FL 33613

Phone: (813) 382-9262

Fax: (813) 878-7954

Email: tarcfest@hamclub.org

We look forward to the same big crowds we had last TARCFest and, as always, hamburgers, hot dogs, specialty sandwiches and liquid refreshments will be available throughout the morning.

Come for the fun, come for the deals. Come to TARCFest!

Directions: From I-4 Take the Hillsborough Avenue (US 92) exit west to 22nd Street and turn North on 22nd Street, AROC is located at on the right at the end of 22nd Street.

From I-275 take the Sligh Avenue exit east to 22nd Street and turn North on 22nd Street, AROC is located at on the right at the end of 22nd Street.

From I-75 take I-4 west to Hillsborough Avenue (US 92) exit west to 22nd Street and turn North on 22nd Street, AROC is located at on the right at the end of 22nd Street.

See you there.

Amateur Radio Newsline(tm) Report 1846 - December 28 2012

Amateur Radio Newsline report number 1846 with a release date of December 28, 2012 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in the Philippines activate as yet another tropical storm hits that nation; new spectrum for hams in Switzerland and the U-K; a ham radio operator in New York City beats the bureaucracy and gets to keep his tower; Canada changes the way it administers its communications enforcement and AMSAT gets a Matching Fund for donations made to the Fox satellite project. These stories and more on the Amateur Radio Newsline report number 1846 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: PHILIPPINES ACTIVATES EMERGENCY NET 7.095 MHZ

Hams in the Philippines are again activated as yet another tropical storm hits the nation. Stephen Kinford, N8WB, has more in this report:

--

Spare a thought for those who spent a nervous, very wet and windy Christmas as Tropical Storm Quinta went through the south of the Philippines. This in areas trying to recover from Tyhoon Bopha earlier in the month.

Landslides occurred in the Visayas, Southern Leyte and Eastern Samar areas. There were more than 5,800 ferry passengers stranded with fishermen told not to venture out.

Activated during the storm was the Philippines Amateur Radio Association Emergency net on 7.095 MHz and VHF, to handle emergency and welfare traffic.

Among those involved were members of the Philippines Amateur Radio Association affiliated club called the District 5 Radio Amateur Network. They were kept busy coordinating pre-emptive evacuations in Tacloban City and elsewhere alongside members of the Disaster Risk Reduction and Management Council. Other radio amateurs were also involved in the overall emergency.

The Philippine archipelago has numerous severe weather events each year. Typhoon Bopha which made landfall over Mindanao on December the

2nd ripped through the southern provinces killing 1,067 people, leaving hundreds missing and many more homeless.

For the Amateur Radio Newsline, I'm Stephen Kinford, N8WB.

--

All ham radio operators world wide awere being asked to keep clear of the Philippine emergency net frequency of 7.095 MHz until operations stand down. (VK3PC, DU1UG)

**

RESTRUCTURING: SWITZERLAND GRANTS HAMS ACCESS TO 472 TO 479 KHZ

A new year's present from telecommunications regulator BAKOM to the ham radio community of Switzerland. As of January 1st, Swiss hams will have access to the low frequency spectrum from 472 to 479 kHz.

As in most other nations that have granted access to this band, the Effective Radiated Power level is 5 watts making it more suitable for low noise digital narrowband modes than either analog voice or CW. (Southgate)

**

RESTRUCTURING: 5 MHZ SLOTS AVAILABLE IN THE UK

And a New Years gift from United Kingdom telecommunications regulator Ofcom to that nations hams. This with the announcement that the previously adopted additional block of frequencies at 5 MHz are now available on a Notice of Variation Basis.

As of January 1st UK hams holding Full Advanced class U-K licenses can apply for the Notices of Variation to gain access to the new frequency slots. Information for U-K hams on how to apply for these as well as a Notice of Variation for operation in the Low Frequency 472 to 479 kHz bands are on line at tinyurl.com/new-UK-nov (Southgate, 5 MHZ Newsletter, G4MWO)

**

RADIO LAW: NYC HAMS WINS FIGHT TO KEEP TOWER

A New York City ham will be able to keep his tower and antenna on the roof of his home in the borough of Manhattan. This after the city's Board of Standards and Appeals overrules the Department of Buildings that had tried to revoke his permit for the antenna that had previously been legally issued. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

In September of 2010, Paul Isaacs, W2JGQ, was granted a building permit for his amateur radio antenna. The antenna system was made up of a 40

foot tower and top mounted Yagi antenna. Isaacs installed his antenna system on the roof of his four story home about 60 or so feet above ground level.

Then some four months after the system had been put in place the City of New York's Department of Buildings declared its intention to revoke Isaacs' properly attained building permit. Why? Well after all that tuime it decided that Issac's amateur radio antenna system was not, in the Department's opinion, an accessory use.

Isaacs appealed the decision through the Department's bureaucracy. When it didn't reverse the decision, W2JGQ had a series of hearings before the New York City Board of Standards and Appeals.

Now comes word that in November the Board of Standards and Appeals ruled that while perhaps uncommon, that an amateur radio antenna system is indeed an accessory use under New York City's zoning ordinance and the building permit was properly granted.

Burt heres the best part. The Board of Standards and Appeals also stated in the case of amateur radio towers, that, unlike cellular towers and certain other structures, there is no expressed standards to guide Department of Buildings in determining at what height a particular radio tower becomes a non-accessory.

While its possible that the city could enact some form of ordinance to create a standard in at some future date, at the moment the interpretation stands as defined. It also has the blessing of the New York City Board of Standards and Appeals.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The bottom line: Not a bad win for ham radio and other private radio users in the city known as The Big Apple. (eHam, others)

**

RADIO LAW: CANADIAN ENFORCEMENT RULES CHANGES

An announcement in the Canada Gazette says that there have been modifications made in the Contravention Regulations concerning the enforcement of the nations Radiocommunication Regulations. These changes will allow peace officers including Municipal, Provincial and Royal Canadian Mounted Police officers to issue tickets for certain offences under the nations Radiocommunication Regulations.

This change is the result of amendments made back in 2000 and 2011 to the Canadian Radiocommunication Regulations to exempt amateur radio apparatus and its operation from the licensing requirement by Industry Canada. Also to respond to concerns expressed by the Standing Joint Committee for the Scrutiny of Regulations. The latter had concluded

that provisions of the Radiocommunication Regulations were redundant to, or inconsistent with, the Radiocommunication Act, or inconsistent with the terms of the Charter of Rights and Freedoms.

You can see the changes and how they might affect radio amateurs in that nation at tinyurl.com/new-Canadian-regs (RAC, VE4WO)

**

COMMUNICATIONS LAW: SUPREME COURT REFUSES TO HEAR CHALLENGE TO 2008 WIRETAP IMMUNITY LAW

The United States Supreme Court has rejected a challenge to a 2008 federal law granting immunity to phone companies. This for assisting the government eavesdrop on private phone conversations. Amateur Radio Newsline's Skeeter Nash takes a look at what transpired:

--

The case involved 33 lawsuits brought against the telecommunications providers in 2006 after news reports that the government had conducted warrant-less surveillance. Phone customers alleged that AT&T, Sprint Nextel, Verizon Communications and others violated federal and state law.

In reaction to the suits, in 2008 Congress passed Section 802 of the Foreign Intelligence Surveillance Act. This gave the Attorney General the power to grant legal immunity to anyone providing assistance to the intelligence community. The then Attorney General used that law to block the 33 suits all of which were eventually dismissed.

The Electronic Frontier Foundation, the American Civil Liberties Union and others appealed. Their lawyers argued that Section 802 violated the separation of powers doctrine of the U.S. Constitution. But in December of 2011, the 9th U.S. Circuit Court of Appeals in San Francisco rejected those arguments, finding the telephone companies immune.

Asking the Supreme Court to review that decision, the civil liberties groups said the law allowed the executive branch to conduct warrantless, suspicionless domestic surveillance without fear of review by courts. Also that it gave the Attorney General sole discretion to decide when eavesdropping was necessary.

But the high court, without comment, has declined to review the challenge to the law.

--

This decision is the latest in which the High Court has refused to review government surveillance practices adopted since the al-Quida lead terrorist attacks of September 11, 2001. (Published news reports)

**

HAM RADIO IN SPACE: FOX MATCHING FUND ESTABLISHED

AMSAT President Barry Baines, WD4ASW, says that the organization has received a matching funds challenge to help with the Fox 1 program. Baines says that an anonymous donor will match up to $25,000 in funds to be donated to the Fox satellite project.

Fox-1B mission will incorporate the spare flight hardware of Fox-1. It is a joint project with the Institute for Space and Defense Electronics at Vanderbilt University and is AMSAT's first satellite with science as its primary mission. As such it holds the potential of opening up new opportunities for free launches. The satellite will also carry a ham radio FM transponder and AMSAT expects to be able to operate the transponder and science payload simultaneously.

AMSAT says that it has requested a launch in the second half of 2014 to a 650 kilometer sun-synchronous orbit. This is same as had been requested for Fox-1.

Donatations to the matching fund can be made via PayPal sent to Martha (at) amsat (dot) org. Or you can simply click on the PayPal logo at www.amsat.org. And we will have more ham radio space related news later on in this weeks newscast. (AMSAT)

**

BREAK 1

Wishing you a very Happy New Year. From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the K7CSK repeater serving Everett, Washington.

(5 sec pause here)

**

RADIO MIRACLES: HAM RADIO OPERATOR WALKS AWAY FROM CHOPPER CRASH

Call it a Christmas miracle. This with word that a Minnesota ham who crash landed his helicopter on his sons back yard helipad has walked away with only minor injuries. Bill Pasternak, WA6ITF, has the details:

--

The pilot was Trygve Svard, KD0PNQ, of Plymouth, Minnesota. According to news reports Svard was in the process of landing his personal helicopter in the yard of his son's home in the rural city of Corcoran at around 10:30 a.m. on Sunday morning, December 23rd. This as he had done many times in the past. But something went wrong as the chopper began to spin with its tail rotor hitting a near-by trailer.

News reports go on to say that Svard's son Stefan was watching his father land the Robinson Model 22 chopper when the accident occurred. The younger Svard ran out with a fire extinguisher. Stefan got his father safely out of the helicopter before a major fire erupted. KD0PNQ reportedly suffered only a scorched arm and singed facial hair but

thankfully was otherwise unscathed.

Brad Christianson, KC0HCP, tells Amateur Radio Newsline that Trygve Svard is a member of the Minneapolis area Twin City FM Club. The news report about the crash describes Svard as being a very skilled pilot.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the Newsroom in Los Angeles.

--

The FAA and National Transportation Safety Board are investigating the incident. More on this story is on the web at tinyurl.com/hams-helicopter-down. (KC0HCP, Lakeminnetonka Patch, other published news reports)

**

ENFORCEMENT: UNLICENDED BROADCASTER WITH THREE TRANSMITTER LOCATIONS HANDED $25000 PROPOSED FINE

An unlicensed broadcaster that tried to fool the FCC by originating his programming frm different locations has been found and issued a $25,000 propsed fine.

Recipient of this likely unwanted gift from Uncle Sam is Fabrice Polynice, of North Miami, Florida, whom the regulatory agency claims to have apparently, willfully and repeatedly violated Section 301 of the Communications Act. This by allegedly operating unlicensed radio transmitters on the frequency 90.1 MHz from three locations in North Miami, Florida.

According to the FCC, while conducting routine monitoring of the airwaves, agents from the Enforcement Bureau's Miami Office determined that an unlicensed radio station was operating on 90.1 MHz from multiple locations, presumably to evade detection. On six different days over several months the agents the used direction finding to locate the source of radio frequency transmissions and traced them to three separate locations in North Miami. The agents made signal strength measurements and determined that the signals exceeded the limits for operation under Part 15 of the FCC rules and therefore required a license.

The agents inspected two of the station locations when Mr. Polynice was not present. One inspection was conducted following seizure of the transmitting equipment by federal marshals. The other was conducted with the residents of the property, and they were issued an on-scene Notice of Unlicensed Operation. But the unlicensed station continued to operate at one of the locations even after the federal marshals had seized the radio transmitting equipment located at another location.

Now in issuing the $25,000 proposed fine, the FCC says that the evidence in this case is sufficient to establish that Mr. Polynice violated Section 301 of the Communications Act on at least six

different days during March to July of 2012. It also stated that its agents heard the station identify itself on the air as "Touche Douce" and announce Polynice's personal telephone number as the station's telephone number. It also noted that Polynice has a history of operating a radio station without a license, which demonstrates a complete disregard for Federal and State authorities and their laws. Despite being arrested and convicted in 2006 for violating the State of Florida's prohibition against operating an unlicensed radio station within the State that Polynice continued to operate an unlicensed radio station at three separate locations in North Miami.

Based on the evidence before it, including what the FCC termed as consideration of the egregiousness of the violations, the history of prior offenses, and the degree of culpability, that it finds that the violations warrant a total upward adjustment of $15,000 from the $10,000 base fine. Polynice was also warned that future violations may subject him to more severe enforcement action, including larger monetary forfeitures, criminal prosecution, and the seizure of his equipment. (FCC)

**

EXPANDING RADIO: MORE RADIO HAMS IN FAIRBANKS

The amateur radio population in Fairbanks, Alaska is increasing thanks to the work of the Arctic Amateur Radio Club. The club reports that in 2012 that it welcomed 18 new Technician licenses and had 11 General class upgrades and 7 Extra class upgrades.

If you are not familiar with Alaska, Fairbanks is located in the interior of the state. It is about a 6 hour drive from the next largest city of Anchorage. (KL3NO)

**

CORRECTION: SUPERSTITION HAMFEST FEBRUARY 9 AND YUMA HAMFEST FEBRUARY 15 - 16

A quick correction to a typo that only appeared only in the text version of last weeks' newscast. In the printed headline, the text gave a date of Superstition Arizona hamfest February 19th while the story itself said the date was the 9th. To clarify, the text of the story was correct and the headline was wrong. The correct date is February 9th.

And while we are at it we should mention that the following weekend is the Hamfest and State Convention in Yuma Arizona. That's February 15th and 16th. The bottom line is that it looks like a busy ham radio month in Arizona and the planners of both these events hope to see you there.

Our thanks to Alan Price. N6ALP for the correction and the Arizona events update. (N6ALP)

**

HAM HAPPENINGS: ORLANDO HAMCATION ON FEBRUARY 8 - 10 IN FLORIDA

The 67th annual Orlando Amateur Radio Club Orlando HamCation Amateur Radio and Computer Show is slated for the weekend of February 8, 9 and 10 at the Central Florida Fairgrounds in Orlando, Florida.

The theme for the 2013 Orlando HamCation is Ham Radio Exploring New Horizons. The event will feature over 150 commercial vendor booths, 400 swap tables, the largest Tailgate Area in the southeast as well as a plethora of forums. Special event station K4H will be on the air from the Hamcation site.

Updated information is available at www.hamcation.com, on Facebook under the fan page of Hamcation. You can also follow developments on Twitter by subscribing to @hamcation. (Orlando Hamcation)

**

HAM HAPPENINGS: STRAIGHT KEY NIGHT ON OSCAR

AMSAT is again inviting radio amateur's world wide to participate in Straight Key Night on OSCAR.

As always, operation is simple and informal. Just use CW through one or more satellites on January 1st 2013 from 0000 to 2400 UTC using only a straight hand key. There is no need to send in a log, but all participants are encouraged to nominate someone they worked for Best Fist. Your nominee need not have the best fist of anyone you heard, only of those you worked. Send your nomination to w2rs at amsat dot org. A list of those nominated will appear on the Amsat News and in the AMSAT Journal.

And less we forget, this year's event is dedicated to the memory of John Thompson, who held the calls W1BIH and PJ9JT who passed away in 2012 ate age 96. Although known primarily as a High Frequency DXer and contester, Thompson was also active on the OSCAR satellites, mostly on CW. (ANS)

**

HAM HAPPENINGS: WYONG CONTEST UNIVERSITY URL UPDATE

>From the social calendar file we have been advised to ask that you use the direct U-R-L for information regarding the Mini Contest University at Wyong Australia. According to the event planners the Tiny URL link will not work because there is a space in the URL which causes problems with tinyurl and other U-R-L compression schemes.

Wyong Mini Contest University takes place on Saturday, February 23rd. If you want more information on this event please take your web browser to www.fieldday.org.au/contest_university/.

If you missed that, don't worry. You will find it in the printed edition of this week's Amateur Radio Newsline report. (VK2JI)

**

HAM HAPPENINGS: HAM RADIO UNIVERSITY 2013 JANUARY 6 IN NY

The 14th annual Ham Radio University will be held on Sunday, January 6th from 7:30 a.m. to 3:30 p.m. at Briarcliffe College in Bethpage, New York. The event will include more than 25 informational forums moderated by local experts in a broad range of Amateur Radio activities. The keynote speaker will be Bill Cross W3TN, Staff member in the Federal Communications Commission's Mobility Division.

Ham Radio University is a cooperative effort supported by radio clubs and related organizations in the New York City and Long Island area. This year the event is being sponsored by the Long Island Mobile Amateur Radio Club. Further information and the forum schedule is on line at www.hamradiouniversity.org. (KS2G)

**

NAMES IN THE NEWS: 2012 YASME EXCELLENCE AWARD WINNERS ANNOUNCED

The Yasme Excellence Awards for 2012 have been announced. Among those receiving honors this year are George Fremin, K5TR; Tree Tyree, N6TR; Trey Garlough, N5KO, and Scott Neader, KA9FOX. This, for their contributions to many infrastructure projects that benefit the ham community at large.

Also recognized is ARRL Education and Technology Program Director Mark Spencer, WA8SME. Spencer received the honor for his contribution to the ARRL Teachers Institute on Wireless Technology and other training efforts. Also for his development of P-I-C microcontroller projects, books for amateurs, as well as working with leaders in student and scientific teams in applying amateur radio to scientific projects and experiments.

The Yasme Excellence Awards are given to individuals who through their own service, creativity, effort and dedication, have made a significant contribution to amateur radio. The award itself takes the form of a cash grant and an engraved crystal globe. For a complete list of these years winners please take your web browser to www.yasme.org/awards. (Yasme. ARRL)

**

NAMES IN THE NEWS: VE3DSS NEW RAC MARITIMES SECTION MANAGER

And congratulations to Craig Seaboyer, VE1DSS, who was recently elected Radio Amateurs of Canada Section Manager for the Maritimes for the balance of a two year term. He ran unopposed eliminating the need for a balloted election. (RAC)

**

NAMES IN THE NEWS: AE5DW TO GUEST ON THE DODROPIN ECHOLINK NER OM JANUARY 5

And on Jan 5th at 2100 hours Eastern Standard Time, Amateur Radio Newsline's Don Wilbanks, AE5DW, will be the guest on the Amateur Radio Newsline Net held on the DoDropIn Echolink conference server. You are invited to - well -- drop in and catch Don talking about his career in broadcasting as well as amateur radio after which the latest Amateur Radio Newsline newscast will be aired. Again that's the Amateur Radio Newsline Net on Saturday January 5th 2100 ours Eastern Standard Time to meet Don Wilbanks, AE5DW, on the DoDropIn Echolink conference server node number 355800. Hope to see you there. (W8WFO)

**

BREAK 2

With you 52 weeks a year every year. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: RESPECTED FCC ENGINEER ANGELO DITTY K4GKB -SK

A name familiar to both broadcasters and ham radio operators has passed from the scene. This with word that former FCC Inspector Angelo Ditty, K4GKB, became a Silent Key on December 2nd at the age of 87.

Ditty served in the Atlanta FCC office as the Engineer in Charge from 1974 until 1990 following a stint with the FCC out of Tampa, Florida. Earlier in his career while based at the FCC's San Francisco office he worked with Ney Landry, W6UDU, who recently passed away at age 95.

After leaving the FCC Ditty took a position with the Georgia Association of Broadcasters where he served until 2011. There he examined engineering and public files for members, allowing them three-year exemptions from FCC inspections.

Memorial services for Angelo Ditty, K4GKB, were held on Friday, December 7th in Canton. Georgia. (RW)

**

CHANGING OF THE GUARD: BARCODE INVENTOR JOSEPH WOODLAND -S.K.

Norman Joseph Woodland who co-created the barcode using Morse code, has died at his New Jersey home at the age of 91.

Barcodes Inc. says that Woodland worked with university classmate Bernard Silver to create the now ubiquitous thick-and-thin-line system in the 1940s. Woodland reportedly used the Morse code as a basis to create the barcode when he just extended the dots and dashes downward and made narrow lines and wide lines out of them.

The BBC reports that the system was patented in the US in 1952 and was later sold for only $15,000. (BBC)

**

HAM RADIO IN SPACE: THREE NEW HAMS JOIN ISS CREW

Three new astro-hams are now on-board the Internationl Space Station. They are American Tom Marshburn, KE5HOC; Russian Roman Romanenko, UT5ERP and Canada's Chris Hadfield, KC5RNJ. All were launched from the Bikenour Cosmodrome in Kazakhestan on board a Soyuz booster on Wednesday, December 19th . The trio traveled for two days in the capsule, before docking with the space station where three other astronauts are already on board. (ANS)

**

HAM RADIO IN SPACE: AMSAT-UK introduces Electronic Membership

AMSAT-UK has announced that it will now offer Electronic E-membership at a reduced rate.

The new E-membership will provide OSCAR News as a downloadable PDF file and members will have the freedom to read it on their tablets or smart phones at their leisure. E-membership should also be especially beneficial to overseas members who have long suffered from high postal charges and long delivery times.

The AMSAT-UK membership year runs from January 1st to December 31st. Members can renew at tinyurl.com/amsat-uk-renew. New members sign up at tinyurl.com/amsat-uk-join (AMSAT-UK)

**

RADIO IN SPACE: CUBESAT DEPLOYERS BEING MANUFACTURED AT CALIFORNIA PRISON

According to a news reports, inmates at San Quentin prison in California are building CubeSat orbital deployers.

Working under the strict guidance of NASA, a handful of skilled inmate machinists are making P-PODs which is an acronym for Poly Picosatellite Orbital Deployers. These are essentially, aluminum boxes designed to hold CubeSats which ride "piggyback" into space as secondary payloads.

The devices are part of a new generation of low-cost, miniature launch vehicles developed for research used by more than 150 universities worldwide. You can read the complete story on-line at tinyurl.com/prison-satellite-deployers (Southgate)

**

WORLDBEAT: ACMA SAYS NO MORE VK MICKEY-D SPAM E-MAIL

The Australian Communications and Media Authority has given McDonald's Australia Limited a formal warning under the nations Spam Act about a

`send to friends' facility on the McDonald's Happy Meal website. According to the WIA News, an ACMA investigation found that e-mails using the `send to friends' facility which promoted games and activities were sent to friends of users without first getting the friends' consent. The messages also did not have an unsubscribe facility, as required by that nations Spam Act. (WIA, ACMA)

**

WORLDBEAT: HUNGARY CLOSES REGIONAL PUBLIC SERVICE STATIONS

Hungary's Media Services and Support Trust Fund has closed all five of its regional radio studios which make up the Regio Radio network. According to the Trust memo on December 21st, the studios will be leased out, and staff will either be made redundant or employed as correspondents for the national public talk and news service.

According to the Chief Operating Officer of the Media Services and Support Trust Fund, the Regio Radio network experienced a waning audience due to increasing competition from other local private stations. The soon-to-be-available FM and AM frequencies will be used for broadcasting a new nationwide public service of Hungarian song or urban folk music and at least one operetta music station, (RW)

**

WORLDBEAT: NEW CANADIAN HELLSCHREIBER AWARD

A new award has been created for those ham radio enthusiasts in Canada who enjoy operating Hellschreiber. The basic Worked All Canada award requires contacts in Hellschreiber with the ten Canadian Provinces. The complete award requires additional QSO's be held with the three northern Territories of the Yukon, the Northwest Territories, and Nunavut.

Hellschreiber was originally a mechanical mode that now is operated by most in the digital domain and enables the transmission of text using facsimile technology. The start date of the award was December 19th which happened to be the birthday of Dr. Rudolf Hell, who patented Hellschreiber in 1929.

You must be a member of the Feld Hell Club to be eligable, but contacts with non-members are bvalid for award credit. A sample of the certificate, the rules and information on how to apply for the award is on line at tinyurl.com/Hellschreiber-Canada-Award. (Feld Hell Club)

**

ON THE AIR: 6 METER PROPAGATION TO BE ACTIVATED IN ANTARCTICA

On the air, listen out in February for Craig Hayhow VK6JJJ, who will be signing VK0JJJ from the coast of MacRobertson Land and Australia's base at Mawson in Antarctica. He arrives on February the 10th and while there he is also planning to install a 6 meter beacon to test the

propagation on that band. The beacon will operate using the call VK0RTM running 400 watts out into a 5 element yagi. For contacts on the high frequency bands he will be running a Flex 5000A and an amplifier to a triangle antenna. QSL via VK3ZAZ. (VK3PC)

**

DX

In DX, OH1LEG will be active from Rodrigues Island through January 7th signing stroke 3B9. He will be operational on 160 through 10 meters using SSB , RTTY and PSK31. QSL direct via OH1LEG.

DF3FS and DL1QW will be active stroke 5Z4 from Kenya from January 6th to the 20th . They will be operating 80 through 10 meters using CW , SSB and RTTY. QSL via each operators home call.

PP1CZ will be on the air from Fernando de Noronha Island January 15th to the 21st signing PY0F. He will focus on 160 and 80 meter CW. QSL via his home call.

JR1IZM will be active from Lesotho through January 2013 as 7P8ZM He will be operational on all of the High Frequency bands but no specific modes or operating times have been mentioned. QSL via JO1CRA

DK9FN is operational from Temotu Province using the call H-40-F-N through January 7th. If you make contact QSL H-40-F-N via HA8DD.

JR1IZM is in Losotho has been issued with the callsign 7P8ZM. He will be active until mid-January though no specific bands or operating times are known. QSL's go via his home call.

Prefix hunters will be interested in the callsign 8N119T. This is being used to celebrate the 65th anniversary of the Tokyo Fire Department and will be in operation until March 25th. QSL as directed on the air.

Lastly, an international team organized by the Belgian Rockall Team will be on the air from Burundi between February 14th and the 23rd with four stations using the call 9U4U. Activity will be on 160 through 10 meters using CW, SSB and RTTY. Their QSL Manager will be M0URX and their website can be found at www.9u4u.be

(Above from various DX news sources)

**

THAT FINAL ITEM: ANNIVERSARY OF LAST MORSE CODE TELEGRAM

And finally this week, we celebrate the last telegram ever sent in New South Wales, Australia. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

The date was December the 13th, 1962 when the last telegram and its reply were sent by Morse code in New South Wales. And in a 50th anniversary re-enactment, former Telegraph Operator Phil McGrath traveled to Bombala, Australia, to send and receive souvenir telegrams to mark the occasion.

At the appointed time McGrath sat at the sounding box and typewriter and received what was originally meant to be that all important commemorative message. It read:

"This telegram from Sydney to Bombala is the last message which will be sent by Morse in New South Wales, concluding 104 years of operations. Henceforth telegrams to and from Bombala like all other offices in this state will be transmitted through the teleprinter perforator switching system TRESS."

Not to be outdone, Bombala's then postmaster Stan Blyton, sent his own reply that read:

"My privilege personally to transmit the last message from last Morse station New South Wales. Key being forwarded to you is a relic that was in use in 1919 where I joined service and remained there in use untill station closed in 1960. On behalf old telegraphists and Morse operators we bow to progress."

And with that transmission the celebration of Morse messaging system in New South Wales, Australia, had come to an end.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

TRESS eventually also ceased its messaging, first giving way to individually owned Telex machines and in more modern times to internet based e-mail. (VK3PC)

2012 DXpedition of the Year

Posted: 24 Dec 2012 03:56 PM PST
http://forums.qrz.com/showthread.php?373262-2012-DXpedition-of-the-Year&goto=newpost

The long awaited DX World.net 2012 DXpedition of the Year is now available!This was an incredibly difficult poll to decide on considering so many notable expeditions took place during the last 12 months. It□s conceivable that up to 40 different DXpeditons could have been nominated, however, a short-list of 26 make the poll.In previous years the poll was limited to three or five votes. This year we have decided to allow free voting on as many DXpeditions you wish to select. In addition, to prevent repeat votes*, an account must be created using your callsign and QRZ.com listed email address. Once created you will receive an email then you are ready to vote.The poll closes on January 15, 2013 where full results and eventual winner will be revealed. Share with friends and pass the word that the 2012 DXpedition of the Year poll is now open!*Note: Fake, dupe or dummy votes are checked.73!Col, MM0NDX & Max, IK8LOV

HamRadioNow: HANDHELD SDR; Situational Awareness using Ham Radio - from the DCC

Posted: 28 Dec 2012 12:22 AM PST
http://forums.qrz.com/showthread.php?373584-HamRadioNow-HANDHELD-SDR-Situational-Awareness-using-Ham-Radio-from-the-DCC&goto=newpost

HAMRADIONOW.tv

Episodes 44 and 45 from the ARRL/TAPR DCC

Episode 44: Design for a Practical Handheld Software Defined Radio

Chris Testa KD2BMH wants to take SDR with him, in handheld form. That's not as easy as you might think. Power is the first problem. SDR uses lots of juice. Size is another. If you have a mode-agile SDR handy-talky in your mitt someday soon, you may have Chris to thank.

In the introduction, Gary refers to the DVD that ARVN produced of the SDR Forum at the 2009 Dayton Hamvention®. That DVD is still available for $15 HERE.

HamRadioNow

Episode 45: Situational Awareness, etc., using Amateur Radio

Aleks Rohde W3JAG is a retired Coloner and lawyer in the Army, and she has worked with Homeland Security (if fact, she coined that name). Here she's talking as a ham (and maybe a little more) about what Ham Radio an do at the very local level to get information up the food chain in an emergency. This talk is "operational," not really technical.

HamRadioNow

The ARRL/TAPR DCCis an annual, three-day conference featuring presentations on a variety of technical and operational aspects of Amateur Radio. This year's DCC, held in Atlanta last September, had 16 of the 45-minute main presentations, the usual Saturday banquet talk, and a four-hour "deep dive" into GNU radio on Sunday. HamRadioNow videotaped all the talks, and we are now releasing them on-line. We'll continue with one or two a week until you have them all.

Watch these episodes at our web site, www.HamRadioNow.tv.

SARL NEWS SUNDAY 30 December 2012

You are listening to ZS6SRL, the official radio station of the South African Radio League, the national body for amateur radio in South Africa. The SARL broadcasts a news bulletin every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream, visit www.sarl.org.za, click on 'Amateur Radio Today' and follow the links for details. For audio via Echolink, connect to ZS0JPL-R.

You can download this bulletin and previous ones from www.sarl.org.za and also subscribe there to receive future bulletins by e-mail.

Your newsreader this morning is (name), (call sign), on 145,725 from Pretoria, with relays on 7,066 MHz and 3,695 MHz SSB. (Other news readers change to suit).

IN THE NEWS TODAY:

ICASA TABLES DRAFT NATIONAL RADIO FREQUENCY PLAN

LITTLE MOVEMENT IN THE ANTENNA DEFENCE FUND THIS PAST WEEK

GET READY FOR THE YOUTH SPRINT ON 23 FEBRUARY

You are listening to ZS6SRL. Stay tuned for more details on these and other important and interesting items.

ICASA TABLES DRAFT NATIONAL RADIO FREQUENCY PLAN

ICASA has gazetted a draft of the National Radio Frequency Plan for comment by 8 February 2013. The National Radio Frequency Plan is the base document for allocation of spectrum to various services. The nearly 200 page document needs careful scrutiny to ensure that amateur allocations are fully covered, particularly in the VHF, UHF and microwave bands. Gazette number 36025 is available on www.amateurradio.org.za/SARLREGULATORYWG.htm. Radio Amateurs are invited to study the document and provide feedback to the SARL Regulatory Workgroup by 15 January 2013. Send your input to sarlregwg@sarl.org.za.

One immediate positive aspect is that the new allocation of 472 - 479 KHz to amateur radio is shown as secondary allocation which makes the way for allocation as soon as the plan has been adopted.

The SARL has made application to ICASA to have the 160 metre band extended. This is not provided for in the draft plan. There is however a foot note that pays the way for further discussion. Foot note 5.096

list a number of countries where administrations may allocate 1 810 to 2 000 KHz to the amateur service after consultation with neighbouring countries. The SARL will keep pursuing the possibilities of having the band extended.

The new SARL regulatory workgroup will meet in early January. The committee currently has three members and is inviting more amateurs who have an interest in regulatory issues to offer their services. Send your details to sarlregwg@sarl.org.za.

LITTLE MOVEMENT IN THE ANTENNA DEFENCE FUND THIS PAST WEEK

Currently the SARL Antenna Defence Fund is standing at R25 650 which is just over 50 % of the target of R50 000. Thanks to radio amateurs and clubs who have contributed. We appreciate your support.

As we enter the New Year and clubs become active again and hold meetings we hope to see many more contributions from clubs.

To see who have contributed thus far, visit www.sarl.org.za and select ADF from the left hand menu.

On the ADF page you will also find details of the fund and why and what action the SARL is taking to make it possible for radio amateurs to have antenna towers without having to go through endless paperwork and costs.

GET READY FOR THE YOUTH SPRINT ON 23 FEBRUARY

The SARL Youth Sprint will be held on 23 February and no longer on Youth Day on 16 June. The reason for changing the date is that there are so many activities on National Youth Day that schools and young people found it difficult to fit in all the activity. The sprint is held 10:00 to 12:00 CAT with a special event starting at 09:00.

For the special event the SARL would like to put together an audio file of young Radio Amateurs voicing their opinions about amateur radio and why they became involved.

The recordings will be done telephonically from mid-January to end January. To take part send an email with your name, callsign and telephone number to youth@sarl.org.za and you will be contacted to set up a recording date and time. All participants will go into a lucky draw for some great prizes.

Watch SARLNEWS and the SARL web for more details.

SARL BLUE BOOK

The SARL Blue book is now available on line with full details of the 2013 contest line-up, rules, logbook information and all you need to know to take part in contests and have fun. Well it is not actually a blue book, it is a PDF file you can download and view on your pc, laptop or tablet.

The name blue book comes from years back when the contest information was in a printed A5 booklet with a blue cover. Those days the internet and pc were not that ubiquitous.

To download visit www.sarl.org.za, go to site index, select C and from the menu you can download the Contest Manual or Blue Book if you like. The full url is in the printed version of SARLNEWS (Do not read www.sarl.org.za/public/contests/contestrules.asp)

6 METRE STATION TO BE ACTIVATED IN ANTARCTICA

Listen out in February for Craig Hayhow, VK6JJJ, who will be signing VK0JJJ from the coast of MacRobertson Land and Australia's base at Mawson in Antarctica. He arrives on February the 10th and while there he is also planning to install a 6 meter beacon to test the propagation on that band. The beacon will operate using the call VK0RTM running 400 watt out into a 5 element Yagi. For contacts on the high frequency bands he will be running a Flex 5000A and an amplifier to a triangle antenna. QSL via VK3ZAZ.

HUNTING LIONS-IN-THE-AIR

This event takes place on the weekend closest to 13 January, the birth date of Melvin Jones, the founder of the Lions organisation. In 2013, that will be the weekend of 12 and 13 January.

It will not be a contest but merely a means for Lions to exchange greetings with other Lions and Lions Clubs. Radio amateurs and members of the various Lions Clubs get together and the Lions are allowed to exchange greetings with other Lions under supervision of the radio amateur. Normally the name and number of the Lions Club is the exchange.

Contact Rad Handfield-Jones, ZS6RAD, whose email address is rad.handfield-jones@pixie.co.za and Willie Axford, ZS5WI, with address zs5wi@telkomsa.net for more information.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low levels. All visible Sunspots are currently stable. There is currently no chance for strong solar flares.

If you want to do your own frequency predictions, the expected effective sunspot number for the week will be around 40.

All the bands from 20 to 10 m will provide lots of DX fun with 15 m providing the best openings with 20 m not far behind. There will also be frequent 10 m openings.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS 12 and 13 January - Hunting Lions-in-the-Air activity. 15 January - Last day to provide feedback on the DRAFT NATIONAL RADIO FREQUENCY PLAN to sarlregwg@sarl.org.za. 31 January - Last day for

submission of nominations for councilors for the next term and motions for the 2013 AGM. 31 January - Last day for submission of a brief outline of a proposed paper at the SA AMSAT Space Symposium on 18 May 2013 to saamsat@sarl.org.za. 23 February - SARL Youth Sprint 10:00 to 12:00 CAT with a special event starting at 09:00.

SARL News invites clubs and individuals to submit news items of interest to radio amateurs and short-wave listeners. Submit news items - if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp, not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to Amateur Radio Today every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area, with relays on 7 082, 7 205 and 17 760 kHz. There is also a podcast by ZS6RO. For a web-stream and Echolink by ZS6FCS, visit www.sarl.org.za, click on 'Amateur Radio Today', go down the green column and click on 'LISTEN ON THE WEB'. A repeat transmission can be heard on Mondays at 18:30 UTC on 4 895 kHz ((A new time and frequency!). Reception reports are invited. We are particularly interested in reports of the 4 895 kHz transmission on Mondays at 16:30 UTC as the frequency is close to the proposed new amateur allocation near 5 MHz. Reception reports from all areas in South Africa would be useful in our bid to ICASA for frequencies pilot studies. Send reports to artoday@sarl.org.za.

Sentech sponsors the transmissions on the non-amateur frequencies.

>From the SARL News team we wish all listeners a happy and prosperous new year. May your radio amateur activity bring you lots of pleasure.

You have listened to a bulletin of the South African Radio League compiled and edited by George Honiball, ZS6NE.

Thank you for listening, 73.

/EX

AGB-NYSB-Contest-2013 = Jan 1, 2013

Posted: 29 Dec 2012 06:10 AM PST
http://forums.qrz.com/showthread.php?373706-AGB-NYSB-Contest-2013-Jan-1-2013&goto=newpost

AGB-NYSB-Contest-2013 = Jan 1, 2013

I invite you to take active or possible part in the forthcoming
AGB-NYSB-Contest-2013 which will be on January 1, 2013 = 0000 - 0100 UTC.

http://www.ev5agb.com/contest/agb_nysb.htm

DATE: First January 0000-0100 UT

The object of the Contest: Licenced amateurs radio worldwide and SWL;

CONTEST CALL: CW - TEST AGB; SSB - CQ AGB CONTEST;

MODE: CW, SSB and Digital;

FREQUENCIES: CW (3510 - 3555); SSB (3700 - 3750) - recomende; Pilot
frequency: CW-3540, SSB-3720

REPEAT: Each 15 minutes (8 periods) you can make CW-QSO and SSB-QSO with
every station. There are periods - 0000 - 0014, 0015 - 0029, 0030 - 0044,
0045 ☐ 0059

ENTRY:

A ☐ Single Operator MIXED (CW + SSB) ☐ AGB-member

B ☐ Single Operator CW ☐ AGB-member

C ☐ Single Operator SSB ☐ AGB-member

D ☐ Single Operator MIXED (CW + SSB)

E ☐ Single Operator CW

F ☐ Single Operator SSB

G ☐ Single Operator MIXED (CW + SSB) QRP (Max 10W)

H ☐ Multi Operator

I - SWL

J - DIGITAL - RTTY, PSK, BPSK ....

EXCHANGE: No AGB member stations - RST + number of QSO (599-001);

AGB member station - RST + number QSO + AGB-number (599-001/60);

SCORING: Each QSO in your continent - 1 point, with other continent - 3 point,

Each QSO with AGB member give 5 points (Contest number /AGB-club-number);

MULTIPLIERS: Each AGB mebmer and each new country (DXCC-, WAE-list).

LOGS: logs schould be in Cabrilo format.

Send to Igor OK8EU-EU1EU.

by email => eu1eu@mail.ru or agbcontest@ev5agb.com

Also you can send log by post-mail: Igor "Harry" Getmann, EU1EU, P.O.Box 143, Minsk 220005, BELARUS. The target date for 3 week.

Remarks: CW contacts in SSB portion of the bands and SSB contacts in CW portion are not allowed.

SWL Info: Same rules as transmitting section (Call of one of correspondent must be write not more 5 times in 15 minutes period).

Awards:

All contesters, who send logs will be awarded, original award of AGB-NYSB Contest in PDF format ==========

Sandy Signals: Ham Radio Operators Provided Communications During Storm:

Posted: 29 Dec 2012 02:56 AM PST
http://www.eham.net/articles/29561

One day after Superstorm Sandy pushed ashore in late October, John Hoge was positioned inside the Winters Mill High School attendance office in Westminster. He was surrounded by a car battery, an antenna and a ham radio at Winters Mill, which was serving as one of the county's two official shelters while Sandy moved through. The county was spared the worst from Sandy. Peak winds in the area were roughly 60 mph. Lines of communication held up. But even if they hadn't, ham radio operators like Hoge would have been able to keep communication lines open. The Carroll County Amateur Radio Club is always ready to provide communication options during emergencies if other options that are reliant on the current infrastructure fall through. During Sandy, ham radio operators were located at Winters Mill and Century high schools, the two sites designated as shelters by the county. At least one radio operator, usually two, were positioned at the Carroll County Emergency Operations Center in Westminster for the duration of the storm. "We're here to help in any way we can," Hoge said in October while manning his communications post at Winters Mill.

With enough power and weak signal modes you can use the geostationary
broadcast satellites as passive reflectors .

Irish Radio Transmitters Society
Radio News Bulletin
Sunday 30th December 2012

Silent Key

It is with great regret that we inform you of the sudden death on Christmas Day of Roy Cookman EI7H of Churchtown in Dublin. Funeral arrangements are not yet available. Roy with Jim EI2BB constructed the IRTS Hal Hodgens Trophy. He was a great CW operator and was a telegraphist in the Royal Navy during the Korean war and subsequently worked for Pye Telecommunications. To his wife Betty and to his son and daughter we extend our sincerest sympathy. May he rest in peace.

New MF Allocation

We have been informed by ComReg that the band segment 472 to 479 kHz becomes available to all licensed radio amateurs here, on a secondary basis, with effect from 1 January 2013. The maximum power is 5 watts (7 dBW) and the modes available are CW, QRSS, and narrow band digital modes. Stations in the Amateur service operating in this band shall not cause harmful interference to, or claim protection from, stations of the aeronautical radionavigation service or stations of the maritime service. The amateur service shall ensure that no harmful interference is caused to the frequency 490 kHz which is used exclusively for the transmission by coast stations of navigational and meteorological and urgent information to ships. This announcement arises from a decision taken at WRC-12 and is the result of a number of years of lobbying by the IARU and its Member Societies worldwide. The Test Licence held from ComReg by IRTS under which a number of licensed amateurs were given permission to operate in the band segment 501 to 504 kHz expires on 2 January 2013. Licensed amateurs who had received such permission must cease operation on 501 to 504 kHz as and from Wednesday next, 2 January at the latest. The Society appreciates that ComReg has made this new allocation available to licensed radio amateurs from the earliest date possible under the WRC-12 decision.

EI13CLAN

As you may be aware, 2013 sees a major event entitled 'The Gathering' being promoted both at home and abroad to engage with the Irish

Diaspora around the globe. This is a 32 county, cross border, initiative and given the unique ability of Amateur Radio to communicate so effectively, the Society will support the initiative by way of a variety of events and programmes during the year. We will announce particulars early in the new year by way of bulletins on the radio news service, a dedicated page on the IRTS website and of course in Echo Ireland. ComReg has issued to the Society a special event callsign 'EI 13 CLAN' which will be active through out the year, much as our 'EI 80 IRTS' call was used in 2012.

We expect that the callsign will generate quite a lot of interest from overseas operators, particularly in the U.S., who have Irish roots, so if there are any members who have a particular interest in genealogy and who would be willing to assist with any such queries please contact Seamus EI8BP, or any member of the committee.

Any member wishing go on air with EI13CLAN should contact Dave EI6AL at dave.ei6al /at/ gmail.com or by phone on 0861000000.

IRTS 80m Counties Contest 2013.

The date for the 2013 IRTS Winter 80m Counties Contest is Tuesday 1st January.

Check the rules at: www.irts.ie/cgi/showrules.cgi?80m Please notice Rule 4.4 and 4.5 and keep the portion of the band between 3.650 and 3.700 clear for non-contesters.

Also notice the change in Rule 10.1 which states Entries must be received by the Contest Manager not more than 14 days after the contest.

Coolmine Radio Rally

Coolmine rally will be held at the Coolmine Community School on Sunday 10th February 2013. Doors open at 8.30am for traders and for member of the public at 11.30am. Admission is 5.00. Usual traders will attend and there will be a bring and buy sale. Tea and refreshments available all day during the event. Unlimited free car parking available. To book a table for the rally please call the following: Tom, 01 8211043 or Tony, 087 2439997. Everyone welcome to this excellent annual event.

DX News

Max DJ4EL has been active as XE1/DJ4EL over the Christmas period. He will leave Mexico on 2 January and commence operation as V31ME from Belize on 3 January. While in Belize he will be located on Ambergris Caye which is IOTA NA-073. He will make a side trip to Long Caye (IOTA NA-123) from 5 - 12 January. He leaves for home on 17 January.

A number of Japanese operators will be QRV from Palau from 9 -14 January. Callsigns to look for are T88SM, T88CP and T88HK. Activity will be on all bands 80 - 10m SSB and CW. QSLs go via the home calls.

JG7PSJ will be QRV from Ogasawara from 30 December until 4 January. He will use the callsign JD1BMH. QSL info is via his home call.

Nao JN1RVS has been on the island of Montserrat over Christmas signing VP2MRV. His trip ends on 3 January. QSL Manager is JA1HGY

South Eastern Amateur Radio Group

The next meeting of SEARG will take on the 28th of January 2013 in the Roanmore Social and Sports Centre, Cleaboy Road, Waterford at 8.30 p.m. The meeting will be preceded by a committee meeting at 8.00 pm. New members are always welcome.

Items for inclusion in next week's Radio News can be submitted via e-mail to "newsteam /at/ irts / dot / ie" for automatic forwarding to both the radio and printed news services. Urgent news items for the radio news maybe telephoned to the radio news editor, Aidan, EI7JC on 085 7100511.

Please note that items for the radio news should reach the editor no later than midday on Thursday in order to be guaranteed inclusion in the following Sunday's bulletin.

Library Receives Set of Amateur Radio Operating Books Amid Budget Crisis:

Posted: 30 Dec 2012 01:49 AM PST
http://www.eham.net/articles/29563

CRESTVIEW -- Eleven new manuals and handbooks recently donated to the Crestview Public Library will be a valuable resource for amateur radio enthusiasts -- also called "hams" -- Library Director Jean Lewis said. Among the North Okaloosa Amateur Radio Club's donations were training manuals, for new amateur radio buffs seeking operator's licenses, and guides for more advanced hams. The donation will benefit the Crestview area and serve radio buffs throughout the county, Lewis said. "These are very good, excellent books on ham radio," she said. "Until this donation, we only had one book, which was 'Ham Radio for Dummies.'" The donation comes when the Crestview City Council has eliminated the library's book acquisition budget. "We're helping the library get books they can't afford to buy," NOARC activities director Cal Zethmayr, W4GMH, said. "Anybody who wants to study ham radio or learn more about it can check these out." The books are available to any Okaloosa County resident within the county library system, Lewis said. "We knew the library was under pressure for money to get new books," Zethmayr said. "These are brand new books the (American Radio Relay League) requires. If we can reach more people and get more operators, the better for the community." The league -- of which NOARC is a member -- in 2014 will celebrate its 100th year of American amateur radio. In addition to connecting with fellow hams all over the world, amateur radio club members advise local Boy Scout troops during the worldwide Jamboree on the Air, Zethmayr said. They also provide communications during regional emergency operations.

Relayed from Murfreesboro, TN

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AB5K & the AR TelNet Clusters Network, K1XN & GoList, NJ1Q & W1AW, N2ZN, NG3K & ADXO, W3UR & The Daily DX, N4AA & QRZ DX, KH6BZF, K8GI, K8PGJ, K8YSE, W8GEX & 60m News, WB8RFB, W9ILY, AT International, DK8JB & The DX News Letter, DL1SBF, DxCoffee.com, DX-World.Net, ES1CW, F5NQL, F6AJA & Les Nouvelles DX, I1JQJ/IK1ADH & 425 DX News, I2MQP & DX Italia News, OA4AI, OZ6OM & 50 MHz DX News, Pete's DX-Newsdesk, RSGB IOTA Web Site, Sixitalia Weekly, VA3RJ & ICPO, the VHF-DX-Portal (MMMonVHF) and VK4TS for the following DX information.

*** SPECIAL NOTE FROM EDITOR (Tedd, KB8NW): My family (wife/OPDX's chief proof-reader Linda, son Teddy [TJ] and his wife Jessi, daughter Katie and her husband Kevin and son Lliam), and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy New Year". Thanks to the many individuals who have provided DX information over the past year. Without them there would not be an OPDX Bulletin. Also, thanks to the individuals who sent holiday wishes to my family and me.....
73 and Have a Great/Safe/Healthy New Year de Tedd KB8NW

DXCC COUNTRY/ENTITY REPORT: According to the AR-Cluster Network for the week of Sunday, 23rd-December, through Sunday, 30th-December there were 223 countries active. Countries available: 3A, 3B8, 3B9, 3D2, 3V, 3W, 4J, 4L, 4O, 4S, 4X, 5B, 5H, 5N, 5R, 5T, 5W, 5Z, 6W, 6Y, 7P, 7X, 8P, 8Q, 8R, 9A, 9G, 9H, 9J, 9K, 9M2, 9M6, 9N, 9Q, 9V, 9Y, A2, A4, A5, A6, A7, A9, AP, BV, BY, C3, C5, C6, CE, CE9, CM, CN, CP, CT, CT3, CU, CX, D2, D4, DL, DU, E5/s, E7, EA, EA6, EA8, EA9, EI, EK, EP, ER, ES, ET, EU, EX, EY, F, FG, FH, FK, FM, FO, FP, FR, FS, FY, G, GD, GI, GJ, GM, GU, GW, H40, HA, HB, HB0, HC, HH, HI, HK, HL, HP, HR, HS, HV, HZ, I, IS, J2, J3, J6, J8, JA, JT, JW, JX, JY, K, KG4, KH0, KH2, KH6, KL, KP2, KP4, LA, LU, LX, LY, LZ, OA, OD, OE, OH, OH0, OK, OM, ON, OX, OY, OZ, P2, P4, PA, PJ2, PJ4, PJ5, PY, PZ, R1FJ, S5, S7, S9, SM, SP, ST, SU, SV, SV/a, SV5, SV9, T7, T8, TA, TF, TG, TI, TK, TL, TR, TT, TZ, UA, UA2, UA9, UK, UN, UR, V2, V3, V4, V5, V6, V7, V8, VE, VK, VP2E, VP2M, VP2V, VP5, VP8, VP8/h, VP8/s, VP9, VR,

VU, XE, XU, XX9, YA, YB, YI, YJ, YL, YN, YO, YS, YU, YV, Z2, Z3, Z8, ZA, ZB, ZC4, ZD7, ZD8, ZF, ZL, ZP, ZS

* PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later" (WFWL).

4T, PERU. Members of the Radio Cub Peruano announced the activation of special event station 4T4RDP (4T4 Rally Dakar Per&#65533;) during the Rally Dakar 2013 edition. They will be active using SSB, CW, RTTY and the Digital Modes on 80-6 meters between January 4-13th. QSL via OA4O.

5Z, KENYA. Operators Bertrand/DF3ZS and Thomas/DL1QW will be active as 5Z4/homecall from Diani Beach between January 7-20th (2013). Activity will be holiday style on 80-10 meters using CW, SSB and RTTY. The operators plan on using dipoles, GP and vertical loops. QSL via their home callsign, direct or by the DARC Bureau.

6W, SENEGAL. Just a reminder that Francis, F6BLP, will once again be active as 6W7SK from Saly Portudal, 80 kms south of Dakar on the coast, between January 5-18th, 2013. Activity will be holiday style using the same station as last time (IC-7000 into G5RV antenna) operating mainly CW. QSL via F6BLP, direct or by the Bureau. Logs will be uploaded to LoTW and eQSL. For more details, logs and pictures of his last operation, visit: http://www.f6blp.org/index.php?langue&#65533;&contenu&#65533;me.php

A3, TONGA. Werner, DJ9KH, will be active as A31WH from Vava'u Island (OC-064), between February 20th and March 3rd (2013). Activity will be on the HF bands, depending on propagation. QSL via his home callsign, direct or by the DARC Bureau. ADDED NOTE: Werner will activate Tongatapu (OC-049) before going to Vava'u Island.

CARIBBEAN TOUR. Bjorn, SM0MDG, is now active as V26BM from Antigua until January 4th. After his activity from Antigua, he will travel to Montserrat and be active as VP2MSW between January 4-8th. Activity from both locations will be holiday style with limited high bands operations with a focus on 17 and 15 meters and with possible operations on 10 meters if propagation allows. If possible, there may be some 160 meters operations from Montserrat on 160 meter. This is an ultra-lite operation using a FT-857D and simple wire antennas. Look for the log to be uploaded to LoTW after his return home. QSL manager is Tim, M0URX, either direct or use his OQRS with preferred options at: http://m0urx.com/oqrs

DXCC NEWS. A couple of sources are reporting that Bill Moore, NC1L, ARRL Awards Branch Manager, is now accepting the following operations for DXCC credit:
5T0SP - Mauritania; 2012 operation
J6/W4VAB - St. Lucia; 2012 operation
ZL9HR - Campbell Island; 2012 operation

IDXC 2013. Registration is now open for the 2013 International DX Convention (IDXC). This is the 64th year of this convention, but in 2013

the location has been changed to the Visalia Convention Center in down-
town Visalia, CA. The IDXC is an ARRL sanctioned event and will be held
between April 19-21st. For more details, visit the following Web site at:
http://www.dxconvention.org
http://www.dxconvention.com

IOTA NEWS.............
NA-085. Dennis, WA2USA, will be active as homecall/4 from St. George
Island (USI FL0076S, Franklin County), Florida, between January
20th and February 27th (2013). On this trip he also plans to
activate the lighthouse (ARLHS USA-1057, WLOTA 3178) while on
the island. Activity will be mostly CW on 30/20/15 meters, with
some SSB on 40/20 meters. He also plans to be in the ARRL
International DX CW Contest (February 16-17th) and the NAQP
RTTY Contest (February 23-24th) as Single-Op/All-Band entries.
QSL via his home callign, by the Bureau or direct. Logs will
be uploaded to LoTW. Visit his Web site at: http://www.wa2usa.com

SA-096. (Update/NEW IOTA) Just a reminder that operators Cezar/VE3LYC,
Johan/PA3EXX, Alex/LU5WW and possibly more Argentinian operators
will be active as LU6W (pending) from Escondida Island in the
Chubut Province North IOTA Group between January 2-6th. Activity
will be for four days using two stations. Activity will be on
40-10 meters using CW and SSB. QSL via VE3LYC, direct or by the
Bureau. See their Web page below for more details. There is a
Web page available at: http://lu6w.yolasite.com

ISWL CALLSIGNS (For January). The following ISWL club callsigns will be
used throughout the month of January 2013:

GX4BJC/A - Operated from Walton on the Naze, in Essex, by Herbie,
G6XOU. (/A WAB Square ◆M22 - England & IOTA ◆U-005).

MX1SWL/A - Operated from Great Sutton, in Cheshire, by Geof, M0BAU.
(/A WAB Square ◆J37 - England & IOTA ◆U-005).

MX1SWL/P - Operated from other English locations, by Geof, M0BAU.
(/P WAB Squares can be requested during the QSO. IOTA EU-005).

ALL QSLs will be handled by Herbie, G6XOU, and NOT the individual
operator. The I.S.W.L. is a member of the European PSK Club. All QSL
info is on <www.iswl.org.uk> or <www.qrz.com> or via <www.eQSL.cc>.
NO LoTW. I.S.W.L. Awards are available to all Hams and SWLs, see
<www.iswl.org.uk> for full details. The eQSL.cc cards ARE welcomed for
their awards.

J8, ST. VINCENT & GRENADINES. Al, W6HGF, will be active as J8/W6HGF near
Kingston on St. Vincent between January 9-24th (2013). Activity will be
focused on RTTY using dipoles and a traveling beam. QSL via direct to
his home callsign (NO IRCs), LoTW or ClubLog (OQRS available after
operation). For more details, see: http://www.qsl.net/w6hgf/J8-index.html

MJ, JERSEY. Richrad, M5RIC, will be active as MJ2Z for the CQWW WPX
SSB Contest (March 30-31st) as a Single-Op/All Band/High Power entry.
QSL via M5RIC. He will sign MJ5RIC for any activity outside the contest.

OE2013, AUSTRIA (Special Event). Every Austrian amateur radio operator
has a chance to operate with the special callsign OE2013(???)(their
own suffix) between January 15th and February 18th (2013). Activity is
to celebrate the Alpine Ski World Championships 2013 taking place in
Schladming. An award is available for three different classes (Gold,
Platinum and Diamond). Each class requires a certain number of special
event stations and OE stations logged. Each special event station or
OE station will only count once on each band. All bands and the below
listed modes may be used; the only exception Packet radio and Echo Link
contacts do not count. The award may be worked in the following modes:
CW, SSB, DIGITAL, MIXED and QRP (max. 10 Watts). For complete details,
visit:
http://wmdiplom2013.oevsv.at/export/sites/wmdiplom2013/downloads/Diplomauss
chreibung_Englisch.pdf.

NEW QSL MANAGER. Ken Boasi, N2ZN, informs OPDX: "I am now the QSL Manager for Dave, WJ2O. He has made over 30 DXpeditions over the last 20 years, and I can confirm QSOs with all of them. See wj2o.com for all of his expeditions and also to search all of his logs. His most recent trip was for CQWW CW this year as 8P9DF. Please QSL to me via direct or by the Bureau. My address is good on QRZ.com or in the FCC database."

QSL RECEIVED VIA LoTW: 5R8IC, 9L0W, C6AKQ, CT3AS, EL2ES, OM3JH, SM4RGD, and Z37M

QSLS RECEIVED VIA MAIL: 1A0C, DU1GM, H44RK, H44USMC, JW7XM, OJ0R, P2NNI, P29VPB and RI1FJ

QSLS RECEIVED VIA THE BUREAU: 3XY1D, 4O/ES5TV, 4S7UCG, DL4JS/6W, 9H9OB, 9X0SP, C98RF, EA6/DL7UCX, EA8/DL2DXA, HB0/DJ1IA, HB0/DL4MP, OX3JZ, OX3KQ, OX3XR, PJ5G, PJ5/DL7VOG, SV5/DL2DXA, T6SS, TK/DK1DKE, TO7ZG, UN7RK, V31YN and XP1A

V2, ANTIGUA & BARBUDA. Alan, N3AD, will once again be active as V26M for the ARRL DX SSB Contest (March 2-3rd) as a Single-Op/All-Band/High-Power entry. QSL via his home callsign.

VK9L, LORD HOWE ISLAND. Several JA operators are expected to be active as callsign/VK9L from the Blue Lagoon on Lord Howe Island between January 11-18th (2013). The following operators were mentioned:
Tatsuo, JA3ARJ/VK9L (via JA3ARJ) Kunio (JA1CJA), AE6XY/VK9L (via JA1CJA)
Lida, JA3BZO/VK9L (via JA3BZO) Masumi (JA3AVO), W7AVO/VK9L (via JA3AVO)
Shozo, JA3HJI/VK9L (via JA3HJI) Hiroko (JH3PBL), W7PBL/VK9L (via JH3PBL)
Activity will be on 80-6 meters using CW, SSB and RTTY. Refer to QRZ.com for QSL instructions.

ZF2, CAYMAN ISLANDS. Pete, K8PGJ, will be active as ZF2PG on Grand Cayman (NA-016) during the week of January 12-20th. Activity (when not diving) will occur on 20 to 15 meters SSB during the morning and early afternoon on the weekdays. He will be operating in the NAQP Contest on 20 and 40 meters. QSL via his home callsign or LoTW.

I take it they don't have the bureaucratic NoV system we enjoy in the UK?

Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
24 - 30 December 2012

Solar activity was low. Region 1635 (N11, L=63, class/area=Dac/270 on 25 December) was the most active region this period, producing twelve C-class flares. The largest of these was a C4/Sf at 1304 UTC on 25 December. Although Region 1635 periodically exhibited beta-gamma magnetic characteristics during its lifetime, it exited the visible disk as a simple spotless plage region. Region 1633 (S07, L=113, class/area=Eai/100 on 24 December) produced a C1 at 2226 UTC on 24 December along with numerous low-level B-class flares throughout the period. Region 1638 (N12, L=310, class/area=Hsx/150 on 29 December) produced a single C1/Sf flare at 1933 UTC on 29 December. A 10 degree filament erupted near N08E20 around 1939 UTC on 27 December. While the bulk of the ejecta from this event was directed north of the ecliptic, a weak impact is expected at earth on 01 January.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at normal levels all week.

Geomagnetic field activity was quiet. Solar wind speed at the ACE spacecraft ranged from around 250 km/s to around 350 km/s throughout most of the period. There was a slight increase to about 490 km/s towards the end of the week as the effects from a coronal hole high speed stream (CH HSS) were felt for about a 24 hour period. They have since settled back down to appproximately 400 km/s as the effects of the CH HSS begin to wane. The interplanetary magnetic field total field ranged from around 1 - 8 nT while the Bz component ranged from around +5 nT to -5 nT.

Forecast of Solar and Geomagnetic Activity
31 December - 26 January 2013

Solar activity is expected to be at low levels with a chance of isolated M-class flares throughout the period (31 December - 26 January).

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at background levels throughout the period.

Geomagnetic field activity is expected to be predominately quiet with a chance for unsettled conditions on 01-02, and 10 January with positive polarity coronal hole high speed streams.

Kids in Berkeley Heights, New Providence Invited to Ham Radio:

Posted: 30 Dec 2012 04:46 PM PST
http://www.eham.net/articles/29565

A Ham Radio, on-the-air operating event for kids, to be held on Sunday, Jan. 6, 2013, at the Berkeley Heights Community Center. NPARC, the Amateur Radio Club serving the Watchung Hills Area, will set up two operating ham radio stations for kids of all ages from Berkeley Heights, New Providence and surrounding communities. All are invited to participate, and make direct radio contacts with other kids at Ham Stations all over the USA. In the past there have been contacts made to the eastern United States, as far west as Oklahoma, Colorado and California, and to foreign countries such as Ireland and Australia. This year they expect to make many contacts with stations around the world.

//
Planning Sends Ham Radio Tower on to Council:

Posted: 30 Dec 2012 04:45 PM PST
http://www.eham.net/articles/29564

The Planning Commission Tuesday held a public hearing to consider recommending an amending a city zoning ordinance that would allow ham operator towers and wind mills higher than 35 feet tall.
The matter was originally brought up at the Sept. 25 Planning Commission meeting when Ridgecrest resident Steven Rainey requested a permit to build a 55-foot radio tower with a 15-foot antenna.
Current Ridgecrest zoning ordinances do not allow tower-like structures higher than 35 feet in residential areas. Even in commercial areas, structures like cell towers are subject to conditional use permits and special hearings to determine a myriad of things, including whether they would hinder air traffic patterns around the China Lake Naval Air Weapons Station. City Planner Matthew Alexander recommend that the planning commission recommend the city council amend the zoning ordinance to allow the commission to review and approve those structures on a conditional use basis.
